(iii) *Average Ages of Bridegrooms and Brides.* The age at marriage of brides declined slightly during recent years to an average of about 25½ years, although in the period 1937-39 this decline was temporarily arrested and the average rose to almost 26 years. The ages in years for the past six years were :—1943, 25.62 ; 1944, 25.57 ; 1945, 25.93 ; 1946, 25.51 ; 1947, 25.60 ; and 1948, 25.57. For the following five-yearly periods the average ages in years were :—1911-15, 25.76 ; 1916-20, 26.05 ; 1921-25, 25.76 ; 1926-30, 25.57 ; 1931-35, 25.50 ; 1936-40, 25.72 ; and 1941-45, 25.68. The average age in years of bridegrooms was 28.99 in 1943, 28.85 in 1944, 29.29 in 1945, 28.73 in 1946,

28.93 in 1947 and 28.88 in 1948. It follows, therefore, that brides are, generally speaking, three and one-third years younger than bridegrooms. The average age of brides and bridegrooms for the years 1940-46 showed the effects of war-time conditions. The proportion of young persons marrying during those years increased, thereby causing decreases in the average ages of both brides and bridegrooms. The difference in age between brides and bridegrooms was 3.37 in 1943, 3.28 in 1944, 3.36 in 1945, 3.22 in 1946, 3.33 in 1947, and 3.31 in 1948.

5. **Previous Conjugal Condition.**—The number of bachelors and spinsters, widowed and divorced persons, who were married during 1948 has already been given. The following table shows the conjugal condition of the contracting parties. Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65.

PREVIOUS CONJUGAL CONDITION OF PERSONS MARRIED : AUSTRALIA, 1948.

Conjugal Condition of Bridegrooms.	Total Bridegrooms.	Conjugal Condition of Brides.		
		Spinsters.	Widows.	Divorced.
Bachelors	66,404	61,464	1,689	3,251
Widowers	3,526	1,735	1,179	612
Divorced	4,972	3,253	539	1,180
Total Brides ..	74,902	66,452	3,407	5,043

6. **Birthplace of Persons Marrying.**—A table showing birthplace of persons marrying in 1911, 1921 and 1940 may be found on p. 326 of Official Year Book No. 34. In *Demography Bulletins* Nos. 65 and 66, the relative birthplaces of bridegrooms and brides marrying in 1947 and 1948 will be found tabulated in detail.

7. **Occupation of Bridegrooms.**—The distribution of the 74,902 bridegrooms for 1948 amongst classes of occupations was as follows :—Craftsmen, 18,573 ; Operatives, 14,249 ; Commercial and Clerical, 13,529 ; Rural, 9,490 ; Labourers, 6,878 ; Domestic and Protective Services, 3,851 ; Administrative, 2,714 ; Professional and Semi-professional, 2,697 ; and Not Gainfully Occupied and Not Stated, 2,921.

8. **Celebration of Marriages.**—In all the States marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar-General, or by certain civil officers—in most cases district registrars. Most of the marriages are celebrated by ministers of religion. The registered ministers in 1948 belonged to more than forty different denominations, some of which, however, have only very few adherents. A number of these have been bracketed under the heading " Other Christian ". The figures for 1948 are shown in the following table. Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65.

§ 2. Fertility and Reproduction.

1. *Introductory.*—Of the two elements of increase in the population, namely natural increase and net migration, the former has been by far the more important over the past few decades. The level of natural increase depends on the excess of births over deaths and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.

2. *Number of Live Births.*—(i) *Year, 1948.* There are various methods of measuring the fertility of the population by relating the number of births to the numbers in the population. In each the basic data are, of course, the numbers of live births.

The number of live births registered in Australia during 1948 is shown in the table below. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only. Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65.

LIVE BIRTHS, 1948.

(a) Included with South Australia prior to 1901.

(b) Part of New South Wales prior to 1911.

3 Crude Birth-rates.—The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the crude birth-rate. The crude birth-rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period.

Crude birth-rates for each five-year period from 1861 to 1945 and for each year from 1944 to 1948 for each State and Territory are set out below:—

CRUDE BIRTH-RATES.(a)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Annual Average—									
1861-1865	42.75	43.53	43.37	43.30	35.68	33.99	42.44
1866-1870	40.85	39.50	44.42	40.21	32.35	30.08	39.60
1871-1875	39.13	35.68	42.69	37.17	31.08	29.69	37.04
1876-1880	38.61	32.12	38.55	37.85	32.49	31.49	35.46
1881-1885	37.99	30.99	37.39	38.20	34.23	35.10	35.17
1886-1890	36.63	32.79	39.24	34.23	35.72	34.73	35.22
1891-1895	33.20	30.96	35.13	31.47	31.49	32.89	32.42
1896-1900	28.12	26.24	30.27	26.58	28.54	28.29	27.68
1901-1905	26.83	25.05	26.73	24.87	30.55	28.64	(b)7.04	..	26.36
1906-1910	27.35	25.12	26.87	25.57	29.56	29.14	8.41	..	26.67
1911-1915	28.75	25.39	29.14	28.33	28.62	30.01	12.70	18.76	27.78

1921-1925	24.76	22.42	25.20	22.76	22.88	25.84	18.19	9.61	23.89
1926-1930	21.79	19.67	21.92	19.42	21.55	22.29	15.70	14.65	21.00
1931-1935 ^d	17.29	15.60	18.49	14.89	18.37	19.96	15.99	15.81	16.95
1936-1940 ^d	17.51	16.20	19.47	15.82	19.16	20.57	19.86	18.50	17.51
1941-1945 ^d	19.78	19.25	22.26	20.41	21.71	22.23	11.35	26.83	20.26
Year—									
1944(^d) ..	20.65	19.78	23.10	21.49	22.58	21.17	8.52	27.04	20.98
1945(^d) ..	21.13	20.53	24.81	22.38	21.89	23.27	8.56	26.98	21.73
1946(^d) ..	22.83	23.05	24.79	24.90	24.57	27.15	12.49	32.61	23.62
1947(^d) ..	23.25	23.06	25.65	25.25	25.60	27.70	25.34	38.75	24.06
1948 ..	22.19	22.06	24.80	24.11	25.12	26.38	22.97	39.90	23.08

(a) Number of births per 1,000 of mean population.

1901. (c) Part of New South Wales prior to 1911.

(b) Included with South Australia prior to 1901. (d) Rates based on mean population adjusted in accordance with the final results of the Census of 30th June, 1947.

NOTE.—The birth-rates in the table above are based on live births registered in the respective States and Territories. Some years ago a large proportion of births in respect of which the mother's usual residence was the Australian Capital Territory took place in Queanbeyan, just over the New South Wales border, but with improved hospital facilities in the Territory the movement to outside hospitals rapidly diminished and has been reversed since 1939. The following rates, based on births in respect of which the mother's usual residence is the Australian Capital Territory, are a truer measure of birth-rates in the Australian Capital Territory:—

Annual Average.	Year.
1921-1925 17.07	1944 21.41
1926-1930 22.45	1945 22.58
1931-1935 19.53	1946 26.00
1936-1940 19.29	1947 25.85
1941-1945 23.06	1948 27.46

The variations similarly caused in the birth-rates for the States and Northern Territory by referring the birth registrations to the State or Territory in which the mother was usually resident are shown by the following corrected rates for 1948:—New South Wales, 22.25; Victoria, 22.01; Queensland, 24.92; South Australia, 24.11; Western Australia, 25.14; Tasmania, 26.47; and Northern Territory, 23.38.

The preceding table shows a marked reduction in the crude birth-rate since 1861. The average annual rate, which for the five years ended 1865 was 42.44, fell to 27.68 for the five years ended 1900. In the earlier years of the present century the rate fluctuated somewhat but from 1912, when 28.60 was recorded, there was an almost continuous decline to the very low figure of 16.39 in 1934. The decline in the depression years was to some extent occasioned by the postponement of marriages, and with subsequent improvement in economic conditions the rate rose. Since 1940 the rate has increased quite appreciably due both to a continued improvement in the economic welfare of the community and the war-time boom in marriages. The latter has resulted in an abnormal number of first births but investigation indicates that rates for births other than first were generally slightly higher than might have been expected from pre-war experience.

4. Crude Birth-rates of Various Countries.—The following table gives the crude birth-rates for Australia and each State in comparison with the rates for various other countries.

CRUDE BIRTH-RATES (a) : VARIOUS COUNTRIES.

Country.	1908-13.	1921-25.	1926-30.	1931-35.	1948.
Egypt	43.6	43.0	44.3	42.9	(b) 57.5

5. **Fertility-rates.**—The principal demographic factors affecting the level of crude birth-rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a high percentage of married women of child-bearing age will have a much higher crude birth-rate than one with a low percentage, although the fertilities of the two populations may be identical.

In order to compare fertilities, births are sometimes related to the number of women of child-bearing age or, alternatively, nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility-rate.

The following table sets out for certain periods commencing with 1880-82 the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table the child-bearing age has been taken to be 15-44 years inclusive, but births to mothers who were stated to be under 15 or over 44 years have been included in the compilations.

CRUDE BIRTH-RATES AND FERTILITY-RATES : AUSTRALIA.

Period.	Average Annual Rates.			Index Nos. (Base: 1880-82 = 100).		
	Crude Birth-rate. (a)	Fertility-rates.		Crude Birth-rate. (a)	Fertility-rates.	
		Births per 1,000 Women aged 15-44 Years.	Nuptial Births per 1,000 Married Women aged 15-44 Years.		Births per 1,000 Women aged 15-44 Years.	Nuptial Births per 1,000 Married Women aged 15-44 Years.
1880-82 ..	35.3	170	321	100	100	100
1890-92 ..	34.5	159	332	98	94	103
1900-02 ..	27.2	117	235	77	69	73
1910-12 ..	27.2	117	236	77	69	74
1920-22 ..	25.0	107	197	71	63	61
1932-34 ..	16.7	71	131	47	42	41
1946-48 ..	23.6	104	167	67	61	52

(a) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth-rate. Thus while the nuptial birth-rate for married women increased by only 27 per cent. over the period 1932-34 to 1946-48 the crude birth-rate rose by 43 per cent. due principally to the greatly increased number of marriages during that period.

6. **Specific Fertility-rates.**—So long as customary ages at marriage do not change drastically, the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group the fertility of women of different ages varies considerably and a clearer view of the fertility of the population can be obtained from an examination of what are known as its specific fertility-rates, that is, the number of births to women of specified ages per thousand women of those particular ages.

Specific fertility-rates are usually calculated on the basis of female births rather than total births and are frequently expressed in age-groups as well as in single ages. The following table sets out specific fertility-rates for Australia over the period 1921 to 1948 in five-yearly age-groups.

SPECIFIC FERTILITY-RATES(a) : AUSTRALIA.

Age-group (Years).	1921.	1926.	1931.	1936.	1941.	1944.	1945.	1946.	1947.	1948.
15-19 ..	12.83	14.02	13.08	12.18	11.00	11.02	11.41	12.63	15.36	16.49
20-24 ..	65.45	60.23	53.08	50.33	59.42	62.49	64.46	73.52	80.68	79.14
25-29 ..	82.24	76.82	62.47	62.02	70.78	78.25	81.17	89.51	90.08	87.50
30-34 ..	68.50	61.90	51.25	46.33	49.72	59.48	61.47	65.03	63.76	61.26
35-39 ..	49.48	43.55	33.23	28.80	28.69	35.01	36.60	37.43	36.48	34.11
40-44 ..	21.66	17.63	13.61	10.19	9.52	10.60	11.42	11.87	11.44	10.92
45-49 ..	2.10	1.90	1.45	1.11	0.80	0.88	0.91	1.03	0.80	0.76

(a) Number of female births per 1,000 women in each age-group.

The table above indicates that the most fertile age-group is 25-29 years. The decline in fertility between 1921 and 1936 was general but was more pronounced in the older age-groups. During the period 1936 to 1948 a rise in fertility occurred in all but the oldest age-group.

7. Gross and Net Reproduction Rates.—A single measure of reproduction known as the gross reproduction rate is obtained by adding together the specific fertility-rates for each single age in the child-bearing group. This measure indicates the number of female children who would be born on the average to women living right through the child-bearing period, if the conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers, and consequently it shows more clearly than the crude birth rate the reproductive propensity of the population. It is, however, an imperfect measure of reproduction because it does not take into account the females who fail to live from birth to the end of the reproductive period. A more accurate measure of this nature is obtained by multiplying the specific fertility-rates by the number of females in the corresponding age-group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality and the result is known as the net reproduction rate. The net reproduction rate indicates the average number of female children who would be born to women during their lifetime if they were subject at each age to the fertility and mortality rates on which the calculation is based. A constant net reproduction rate of unity indicates that the population will ultimately become stationary. If it continues greater than unity, the population will ultimately increase, if less than unity, it will ultimately decrease. The following table should be read in the light of the comment which follows it and of the index of fertility in paragraph 9 hereof.

GROSS AND NET REPRODUCTION RATES : AUSTRALIA.

Year.	Gross Reproduction Rate.	Net Reproduction Rate.	Year.	Gross Reproduction Rate.	Net Reproduction Rate.
1881 (a) ..	2.65	(b) 1.88	1940 (g) ..	1.100	1.004
1891 (a) ..	2.30	(b) 1.73	1941 (g) ..	1.154	1.053
1901 (a) ..	1.74	(c) 1.39	1942 (g) ..	1.156	1.056
1911 ..	1.705	(d) 1.421	1943 (g) ..	1.257	1.148
1921 ..	1.511	(e) 1.313	1944 (g) ..	1.289	1.176
1931 ..	1.141	(f) 1.039	1945 (g) ..	1.337	1.220
1936 (g) ..	1.060	0.967	1946 (g) ..	1.455	1.328
1937 (g) ..	1.075	0.981	1947 (g) ..	1.493	1.364
1938 (g) ..	1.069	0.976	1948 ..	1.451	1.326
1939 (g) ..	1.080	0.986			

(a) Approximate only. (b) 1881-1890 mortality experience used. (c) 1891-1900 mortality experience used. (d) 1901-1910 mortality experience used. (e) 1920-1922 mortality experience used. (f) 1932-1934 mortality experience used for 1931 and subsequent years. In so far as mortality has decreased since then, the net reproduction rates tend to underestimate the true position. (g) The numbers of females of child-bearing age on which rates for these years are based have not been adjusted in accordance with the results of the Census of 30th June, 1947.

Since 1881 there has been a substantial downward trend in both rates, but the gross rate has fallen considerably more than the net, showing that the decline in fertility has been offset to some extent by a decline in mortality. The net reproduction rate was below unity over the period 1932 to 1939, and if the low level of those years were to continue, ultimate population decline would be certain. The progressive rise in both gross and net reproduction rates from 1939 to 1947 has been due largely to abnormally high marriage rates. Fluctuations in marriage rates affect both gross and net reproduction rates substantially. When fluctuations in marriage rates are transient, reproduction rates calculated as above are not valid as indicators of relative fertility nor of the extent to which population will replace itself. The fertility of marriages is measured in paragraph 9 below.

8. Gross and Net Reproduction Rates of Various Countries.—In the following table a comparison is given of the gross and net reproduction rates recorded for various countries.

GROSS AND NET REPRODUCTION RATES : VARIOUS COUNTRIES.

Country.	Period.	Reproduction Rate.		Country.	Period.	Reproduction Rate.	
		Gross.	Net.			Gross.	Net.
Netherlands ..	1946	1.92	1.76	Sweden ..	1945	1.26	1.15
Canada ..	1946	1.64	(a)	Portugal ..	1946	1.54	1.12
New Zealand(b)	1946	1.59	1.47	England and Wales ..	1946	1.21	1.11
United States of America(c) ..	1946	1.44	1.36	Spain ..	1943	1.43	1.10
Union of South Africa (c) ..	1939	1.50	1.35	Norway ..	1945	1.18	1.08
Australia ..	1948	1.45	1.33	Belgium ..	1947	1.20	1.00
Denmark ..	1947	1.40	1.27	Austria ..	1939	(a)	1.00
Finland ..	1945	1.48	1.24	Latvia ..	1939	1.18	0.99
Eire ..	1940-42	1.42	1.19	Germany ..	1939	(a)	0.98
Scotland ..	1946	1.34	1.19	Hungary ..	1941	(a)	0.96
Switzerland ..	1946	1.29	1.16	France ..	1944	1.09	0.94

(a) Not available.

(b) Excludes Maoris.

(c) White population only.

NOTE.—Most of the above rates are affected by variations in the incidence of marriage.

9. Fertility of Marriages.—In issues of the Official Year Book prior to No. 35 estimates of the fertility of marriages were published. These were calculated by relating the births of one five-yearly period to the marriages in the preceding five years (*see* Official Year Book No. 35, p. 329). Since the publication of that issue, an improved method has been formulated for measuring current marriage fertility by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current fertility per marriage in respect of confinements in the individual years shown.

FERTILITY OF MARRIAGES : AUSTRALIA.

Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.
1934.. ..	2.30	1939 ..	2.20	1944 ..	2.28
1935.. ..	2.27	1940 ..	2.18	1945 ..	2.36
1936.. ..	2.28	1941 ..	2.19	1946 ..	2.55
1937.. ..	2.27	1942 ..	2.12	1947 ..	2.55
1938.. ..	2.22	1943 ..	2.21	1948 ..	2.44

BIRTHS, DEATHS, AND MARRIAGES—AUSTRALIA, 1860 TO 1948.

RATES OF BIRTHS, DEATHS, AND NATURAL INCREASE—AUSTRALIA, 1860 TO 1948.

EXPLANATION.—The upper curve represents the number of births per 1,000 persons, while the lower curve represents the corresponding death-rate. The distance between the two curves is the rate of natural increase.

INFANTILE MORTALITY RATES—AUSTRALIA, 1907 TO 1948.

EXPLANATION.—This graph shows the marked improvement in infantile mortality rates over the past 40 years. The improvement has been confined mainly to children over one month, considerably less having occurred in the first month of life (*see* page 618).

DEATH-RATES—CANCER AND TUBERCULOSIS: AUSTRALIA, 1907 TO 1948.

(See page 640.)

EXPLANATION.—The vertical scale represents the number of deaths per 100,000 of the population.

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. It will be noted that there was an almost continuous decline to 1942, but a pronounced increase from 1943 to 1946. Comparing this index with the net reproduction rate it is evident that the rise in the latter since 1935 has been caused by a rise in the marriage rate, due firstly to the postponed depression marriages, and secondly to war-time marriages, and only in the last six years to any increase in the fertility of marriages.

10. *Masculinity of Live Births.*—(i) *General.* The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example, State totals), considerable variation is shown. For 1948 the figures ranged from 90.48 in the Northern Territory to 106.72 in Tasmania. The averages for the last intercensal period 1933-47 were as follows:—New South Wales, 105.05; Victoria, 105.52; Queensland, 105.15; South Australia, 105.93; Western Australia, 104.16; Tasmania, 105.76; Australia, 105.21. The following table shows the figures for Australia for each ten-year period from 1901 to 1940 and for each year 1945 to 1948:—

MASCULINITY(a) OF LIVE BIRTHS REGISTERED : AUSTRALIA.

Particulars.	1901-10.	1911-20.	1921-30.	1931-40.	1945.	1946.	1947.	1948.
Total Births ..	105.22	105.27	105.55	105.12	105.57	106.51	105.93	105.36
Ex-nuptial Births ..	104.08	105.25	105.16	105.36	107.77	110.42	101.75	103.55

(a) Number of males born for every 100 female births.

(ii) *Masculinity of Nuptial and Ex-nuptial Births—Various Countries.* A table showing the masculinity of nuptial and ex-nuptial births for various countries appears on p. 942 of Official Year Book No. 22.

11. *Ex-nuptial Live Births.*—(i) *General.* The number of ex-nuptial live births reached 7,438 in 1913, but it fell considerably to 4,775 in 1940. After 1940, however, the number rose sharply to 7,613 in 1946, falling again slightly to 7,173 in 1948. The average number of ex-nuptial live births in Australia during the five years 1911-15 was 7,209, and for the period 1941-45 it was only 6,201, a decline of 14.0 per cent., whereas the annual average total live births for the same period increased by 10.6 per cent. from 132,769 to 146,886; hence a comparison between the results for these two periods shows that the proportion of ex-nuptial births has fallen from 5.43 to 4.23 per cent. of all births.

The variations of the ex-nuptial birth-rates as between the individual States and Territories for 1948 are shown below. Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65.

EX-NUPTIAL LIVE BIRTHS AND BIRTH-RATES, 1948.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Number ..	2,800	1,533	1,514	497	490	280	42	17	7,173
Percentage of Total Births	4.16	3.33	5.43	3.13	3.79	4.01	15.00	2.34	4.03

The numbers of births and the rates at intervals from 1901 to 1948 are as follows:—

EX-NUPTIAL LIVE BIRTHS AND BIRTH-RATES : AUSTRALIA.

Particulars.	Annual Averages—				1943.	1944.	1945.	1946.	1947.	1948.
	1901-10.	1911-20.	1921-30.	1931-40.						
Number of Ex-nuptial Births ..	6,498	6,836	6,238	5,133	6,505	6,905	7,195	7,613	7,263	7,173
Percentage of Total Births	6.05	5.22	4.66	4.40	4.36	4.50	4.48	4.32	3.98	4.03

It is, of course, possible that the number of ex-nuptial births is somewhat understated owing to diffidence in proclaiming the fact of ex-nuptiality, and it is almost certain that the majority of unregistered births are ex-nuptial.

(ii) *Rate of Ex-nuptiality.* A further comparison is obtained by calculating the number of ex-nuptial births per thousand of the single and widowed female population between the ages of 15 and 45 years. The number of ex-nuptial births per 1,000 unmarried women of ages 15 to 45 has been found to be as follows:—1880-82, 14.49; 1890-92, 15.93; 1900-02, 13.30; 1910-12, 12.53; and 1920-22, 10.50. The estimated number for the years 1930-32 was 7.87. The comparative results for various countries given on p. 944 of Official Year Book No. 22 were taken from the *Annuaire International de Statistique*, Vols. II. and V., and showed that ex-nuptial births varied from 38 per 1,000 unmarried women aged 15 to 49 years in Hungary (1906-15) to 4 in Ireland (1900-12) and Bulgaria (1910-11). The rate for Australia was 12 per thousand for the years 1906-15.

(iii) *Comparison of Rates.* The following table, showing the relative proportions of ex-nuptial and nuptial births to the total population, discloses a much greater proportional reduction in the ex-nuptial birth-rate than in the nuptial rate:—

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH-RATES(a) : AUSTRALIA.

Birth-rate.	Annual Averages—				1945.	1946.	1947.	1948.
	1901-10.	1911-20.	1921-30.	1931-40.				
Ex-nuptial ..	1.60	1.39	1.04	0.76	0.98	1.02	0.96	0.93
Nuptial ..	24.91	25.18	21.40	16.47	20.75	22.60	23.10	22.15
Total ..	26.51	26.57	22.44	17.23	21.73	23.62	24.06	23.08

(a) Number of births per 1,000 of mean population.

12. *Legitimations.*—In the several States Acts have been passed to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who comes within the scope of their purposes, born before or after the passing thereof, is deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. During 1947 and 1948 the numbers of children legitimized in Australia were 978 and 874 respectively, compared with 883 in 1939.

13. *Multiple Births.*—Among the total number of 177,976 live births registered in Australia in 1948, there were 174,167 single births, 3,705 twins and 44 triplets. The number of cases of twins was 1,923 and of triplets 15, there being 81 still-born twins and 1 still born triplet. The total number of mothers was, therefore, 176,105, the proportion of mothers of twins being one in every 92, of mothers of triplets one in every 11,740, and of mothers of all multiple births one in every 91 mothers. Multiple births occurred in 1.10 per cent. of confinements.

The proportion of multiple births to total births does not vary greatly from year to year and exhibits no tendency towards increase or decrease:—

MULTIPLE BIRTHS : AUSTRALIA.

Particulars.	Annual Averages—			1945.	1946.	1947.	1948.
	1911-20.	1921-30.	1931-40.				
Mothers of Multiple Births ..	1,387	1,420	1,220	1,803	2,039	2,030	1,938
Percentage on Total Mothers ..	1.06	1.07	1.06	1.14	1.17	1.12	1.10

14. *Ages of Parents.*—The relative ages of the parents of children registered in 1947 and 1948 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births the relative single ages of parents are shown in *Demography Bulletins* Nos. 65 and 66. In the

present work the exigencies of space allow only the insertion of a table for 1948 showing, in respect of all confinements, the relative ages of parents in groups of five years:—

ALL CONFINEMENTS : RELATIVE AGES OF PARENTS, AUSTRALIA, 1948.

Age of Father (Years), and Type of Birth.	Total.	Age of Mother (Years).

15. Birthplaces of Parents.—A table showing birthplaces of parents of children whose births were registered during 1948 appears in *Demography Bulletin* No. 66.

16. Occupation of Fathers.—A table showing occupations of the fathers of all nuptial children registered in 1948 appears in *Demography Bulletin* No. 66.

17. Age, Duration of Marriage and Issue of Mothers.—(i) *General.* The total number of nuptial confinements resulting in live births in 1948 was 168,982, comprising 167,098 single births, 1,869 cases of twins and 15 cases of triplets. The tables exclude the previous issue of former marriages and still-born children. On the other hand, they include children by the same father which were born to the mother prior to the marriage. Children born during the current year are included in the total issue shown.

The tables are shown in summarized form, more complete details being given in *Demography Bulletin* No. 66.

(ii) *Duration of Marriage and Issue of Mothers.* The following table shows that the duration of marriage of mothers of nuptial children ranged from less than one year up to 32 years, and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1948 was 2.35 compared with 2.31 in 1947, 2.36 in 1946, 2.42 in 1945 and 2.42 in 1944.

(iii) *Age and Average Issue of Mothers.* The following table shows the average number of children born to mothers of different ages. In the younger ages there is, naturally, little difference in the average number of children to each mother, but with the increase of the age of the mother the number of issue has fallen in comparison with past years. The average issue of mothers of all ages recorded for 1948 (namely 2.35) is 27.7 per cent. below the average of 3.25 for the years 1911-20.

(v) *Previous Issue of Mothers of Twins and Triplets.* Figures regarding the previous issue of married mothers of twins in 1948 show that 532 mothers had no previous issue either living or deceased, 580 had one child previously, 354 had two previous issue, 190 three, 99 four, 52 five, 30 six, 14 seven, 8 eight, 7 nine, 1 ten, 1 eleven and 1 twelve.

Of the 15 cases of nuptial triplets registered during 1948, 5 mothers had no previous issue, 3 had one, 2 had two, 2 had three, 1 had four, 1 had six and 1 had eight previous issue.

18. Interval Between Marriage and First Birth.—(i) *Interval.* The following table shows the interval between marriage and first birth for 1911-20, 1921-30, 1931-40, 1945, 1946, 1947 and 1948. In cases of twins and triplets, the eldest only is enumerated.

The masculinity of nuptial first births in 1948 was 105.72 compared with 105.36 for total births.

(ii) *Age of Mother and Interval.* Previous issue of mothers of ex-nuptial children is not recorded and for purposes of the following table all ex-nuptial births are regarded as first births. The table shows in condensed form for 1946, 1947 and 1948 the numbers of births of ex-nuptial children, of children born less than nine months after marriage and of all first-born children according to the age of mothers. Over the past few years slightly more than one-quarter of all first births were either ex-nuptial or occurred less than nine months after marriage. Of the first-born children of mothers under 20 years, however, over two-thirds came into this category. The percentage diminishes rapidly to about 17 per cent. for mothers aged 25 to 34 years and then rises perceptibly for mothers in older age-groups.

It must be remembered, of course, that a certain number of premature births is unavoidably included among the births which took place less than nine months after marriage, and they are not necessarily due to ante-nuptial conception. However, information in connexion therewith is not available and the figures in the table must be accepted with this reservation. Tabulations showing single ages of mothers of nuptial first-born children and interval after marriage are given for 1946, 1947 and 1948 in *Demography Bulletins* Nos. 64 to 66.

1948 .. %	68.58	27.98	16.98	19.70	24.40	31.68	39.29	28.81

(a) For purposes of this table all ex-nuptial births are regarded as first births. (b) Excludes 1 birth, age of mother not stated. (c) Excludes 5 births, age of mother not stated. (d) Excludes 2 births, age of mother not stated.

NOTE.—In cases of multiple first births, only one child is included.

19. Interval between Birth and Registration of Birth.—Detailed information for the years 1911 to 1921 regarding the period which elapsed between birth and registration of birth is contained in *Demography Bulletins* issued by this Bureau for those years. The average interval for 1921 was over 14 days for all children.

20. Still-births.—Reliable statistics of the number of children born dead in Australia are not available as registration of these births is not compulsory in all States. In previous issues of the Year Book estimated numbers of still-births have been given. Pending the results of investigations being made into the records of such births which may affect the accuracy of these estimates, figures for 1947 and 1948 are not available.

§ 3. Mortality.

1. Number of Deaths.—(i) Year, 1948. The following table shows the number of deaths, male and female, registered in each State during the year :—

DEATHS, 1948.

Sex.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Males ..	17,085	11,503	6,127	3,619	2,797	1,398	56	70	42,655
Females ..	13,318	10,322	4,335	3,129	1,888	1,130	17	45	34,184

(a) Northern Territory figures included with South Australia prior to 1911. (b) Part of New South Wales prior to 1911. (c) Excludes deaths of defence personnel and of internees and prisoners of war from overseas.

2. **Crude Death-rates.**—The commonest method of measuring mortality is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death-rate. This rate for a given period measures the numbers per thousand of population by which the population is depleted through deaths during that period. Crude death-rates for each State and Territory from 1861 to 1948 are shown in the following table:—

CRUDE DEATH-RATES.(a)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Annual Average—									
1861-1865 ..	16.88	17.48	20.60	15.39	15.15	15.30	17.04

Persons ..	10.04	10.44	9.31	10.25	9.10	9.55	5.99	6.33	9.96

(a) Number of deaths per 1,000 of mean population. (b) Northern Territory figures included with South Australia prior to 1901. (c) Part of New South Wales prior to 1911. (d) Revised rates based on mean populations adjusted in accordance with the final results of the Census of 30th June, 1947.

(e) Excludes deaths of defence personnel and of internees and prisoners of war from overseas.

3. **Standardized Death-rates.**—(i) *General.* The death-rates quoted above are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death-rate of a community will be low if it contains a large percentage of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death-rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, "standardized" death-rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death-rate if the death-rates in each sex and age-group were as recorded, but the age and sex distribution the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their Censuses nearest to the year 1900. Full details of the "Standard Population" are given in Official Year Book No. 22, p. 962.

(ii) *Death-rates in Age-groups.* The following table provides a comparison of death-rates in age-groups in each State for the latest Census year (1947) in which the ages of population in each State were accurately ascertained.

DEATH-RATES(a) IN AGE-GROUPS, 1947.

Age-group (years).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Under 1 ..	29.77	25.83	31.59	23.68	30.66	27.31	47.62	30.30	28.45
1-4 ..	1.99	1.52	2.26	1.33	2.05	1.75	1.32	0.80	1.84
5-14 ..	0.67	0.73	0.86	0.68	0.62	0.81	..	0.77	0.71
15-24 ..	1.11	1.29	1.35	1.08	1.30	1.72	2.90	0.29	1.23
25-34 ..	1.63	1.64	2.14	1.74	1.89	2.13	0.90	1.92	1.75
35-44 ..	3.07	2.88	3.60	2.88	3.22	3.11	4.29	3.82	3.10
45-54 ..	7.86	7.37	7.72	6.65	7.56	6.84	6.65	4.87	7.54
55-64 ..	17.90	17.59	16.54	16.45	16.07	15.50	14.29	15.31	17.31
65 and over	65.49	69.02	64.52	62.89	64.30	66.90	53.46	67.96	66.14
Crude Death rate (all ages) ..	9.53	10.44	9.15	9.62	9.39	9.17	5.97	5.62	9.69

(a) Number of deaths per 1,000 of population at ages shown.

It will be observed that in this particular year, while the crude death-rate for South Australia was only exceeded by that for Victoria, the rates at most individual ages were lower than for all other States.

(iii) *Comparison of Crude and Standardized Death-rates.* The relative incidence of mortality as between individual States and as between the years 1921, 1933, and 1947 is illustrated in the following statement of crude and "standardized" death-rates. These years have been chosen for comparisons because the Census data give essential information as to sexes and ages of the State population. Crude death-rates are shown to indicate the degree to which they disguise the true position.

CRUDE AND STANDARDIZED DEATH-RATES.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Crude Death-rate(a)—							
1921	9.50	10.52	9.37	10.02	10.42	10.30	9.91
1933	8.58	9.59	8.84	8.44	8.64	9.60	8.92
1947	9.53	10.44	9.15	9.62	9.39	9.17	9.69
Standardized Death-rate(b)—							
1921	10.35	10.79	10.24	10.38	11.88	10.83	10.58
1933	8.52	8.74	9.10	7.66	8.74	8.86	8.62
1947	7.44	7.31	7.47	6.77	7.28	7.21	7.34

(a) Total deaths per 1,000 of mean population.
in par. 3 (i) above.

(b) See explanation of standardized death-rates

The comparisons above relate to individual years which happened to be Census years and should not be used as the bases for general conclusions as to changes in incidence of mortality for other than those years.

(iv) *Standardized Death-rates, Australia, 1933 to 1941.* It is not possible to continue the index of mortality formerly published. As indicated in letterpress previously published the index of mortality was an unsatisfactory basis for comparison. The more reliable standardized death-rates for Australia for 1933 and later years were as follows:—1933, 8.62; 1934, 8.92; 1935, 8.83; 1936, 8.70; 1937, 8.58; 1938, 8.59; 1939, 8.73; 1940, 8.51; and 1941, 8.55. Rates for later years were not calculated as it has been impossible to obtain a satisfactory estimate of the age distribution of the population. The rate calculated for 1947 based on final Census results is 7.34.

4. *True Death-rates.*—The main objections to standardized death-rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. A correct measurement of the mortality of the

population can be obtained, however, from life tables. A life table represents the number of survivors at each age from an original batch of newly-born children who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death-rate, since, if the complete expectation of life of a person at birth is 50 years, say, then each person will on the average die 50 years after birth, so that in the standard population one person in 50 or 20 per thousand will die each year. The true death-rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survivorship from each year of age to the next. The table below sets out complete expectation of life at birth and true death-rates for the periods covered by Australian life tables.

COMPLETE EXPECTATION OF LIFE AT BIRTH AND TRUE DEATH-RATES : AUSTRALIA.

Period.	Complete Expectation of Life at Birth. (Years.)		True Death-rate.	
	Males.	Females.	Males.(a)	Females.(b)
1881-1890.. .. .	47.20	50.84	21.19	19.67
1891-1900.. .. .	51.08	54.76	19.58	18.26
1901-10	55.20	58.84	18.12	17.00
1920-22	59.15	63.31	16.91	15.80
1932-34	63.48	67.14	15.75	14.89
1946-48	66.07	70.63	15.14	14.16

(a) Number of deaths per 1,000 males in life table or stationary population.

(b) Number of deaths per 1,000 females in life table or stationary population.

5. Crude Death-rates of Various Countries.—The following table gives the crude death-rate for Australia and each State thereof in comparison with the rates for various other countries.

CRUDE DEATH-RATES (a) : VARIOUS COUNTRIES.

Country.	1908-13.	1921-25.	1926-30.	1931-35.	1948.

				Japan ..	1935-36	21.3	20.2

(a) Number of deaths per 1,000 males in life table or stationary population (see explanation on pages 614-5). (b) Number of deaths per 1,000 females in life table or stationary population (see explanation on pages 614-5). (c) Excludes full-blood aboriginals. (d) Excludes Maoris. (e) White population only.

7. Australian Life Tables.—In connexion with the Census of 1947, life tables, which have been constructed by the Commonwealth Actuary in respect of each sex for Australia as a whole, have been published as a separate Census publication and are also dealt with in the Appendix hereinafter. Monetary tables on single and joint lives based thereon

are to be published by the Commonwealth Actuary. References to earlier Australian life tables appear in Official Year Book No. 20, pp. 962 and 969-73 and Official Year Book No. 29, p. 928.

8. **Infantile Deaths and Death-rates.**—(i) *Australia*, 1901 to 1948. The universal experience that during the first few years of life the higher death-rate of male infants tends to counteract the excess of male births is confirmed by the fact that out of 436,896 male infants born from 1944 to 1948, 14,168 (32.43 per 1,000) died during the first year of life, while of 413,747 female infants only 10,615 (25.66 per 1,000) died during the first year. Still-births are not included in any of the tables relating to deaths.

INFANTILE DEATHS AND DEATH-RATES : AUSTRALIA.

Period.	Number of deaths under one year.			Rate of Infantile Mortality.(a)

(a) Number of deaths of children aged one month and under one year per 1,000 live births registered. (b) Not available. (c) Part of New South Wales prior to 1911. (d) Based on deaths of infants born in the Australian Capital Territory. See footnote, page 596.

These tables indicate the striking decrease in infantile mortality in Australia since the beginning of the century, the number of deaths of children aged under one year per thousand births for 1948 being less than one-third of the average rate for 1901-05. The two tables above reveal the fact that this improvement was due almost entirely to the decrease in deaths from preventable causes, the mortality rate for children aged one month but under one year declining by 87 per cent. while that for children aged under one month declined by only 41 per cent.

A further indication of the considerable improvement in the infantile mortality rate may be obtained from the following figures. During the years 1940 to 1948, of 536,739 children born, 525,755 survived the first month of life and 521,479 the first year of life. Had the high infantile mortality rate of 1901 to 1905 obtained during this period only 518,780 children would have survived the first month of life and only 484,723 the first year of life.

(iii) *Districts.* The total numbers of births and of deaths of children under one year of age for 1948 are shown in *Demography Bulletin* No. 66 for each of the sixty-five districts for which vital statistics have been tabulated.

(iv) *Various Countries and Cities.* Compared with other countries Australia occupies a very favourable position in regard to infantile mortality. In 1948 only New Zealand and Sweden recorded a lower rate than Australia.

A study of the respective rates shows that a high birth-rate is often, though not invariably, accompanied by a high infantile death-rate.

In 1948 the Australian cities, Hobart, Perth, Melbourne, Sydney and Adelaide were among the ten cities having the lowest rates in the following list. The list is headed by Stockholm (10), Oslo (22) and Hobart (22), the next seven cities being Perth, Melbourne, Amsterdam, New York, Sydney, Chicago and Adelaide. Of the cities named, Madras had the highest rate, 238. This rate, however, was for the year 1939.

(v) *Causes of Deaths of Children under one Year.* The following table shows for 1948 the ages of all children who died under one year of age from each of twenty-three causes. Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65. The infantile mortality rates for all births are shown for 1911, 1921, 1931, 1941 and 1948 and for ex-nuptial births for 1925, 1931, 1941 and 1948. Full particulars of the causes of death of all children who died in 1948 under one year and also of those under one month are given for each State and Territory in *Demography Bulletin* No. 66. This contains, in addition, detailed information for Australia as to the age at which children died from each cause of death.

In 1948, pre-natal influences, such as congenital malformations, congenital debility and premature birth, together with injuries at birth and other diseases of early infancy accounted for 3,477 or 70 per cent. of all deaths under one year; and of these 3,477 deaths, 2,832 or 81 per cent., occurred less than a week after birth. Among the survivors of the first week, broncho-pneumonia caused the greatest number of deaths attributable to a specific disease. This disease was responsible for 365 deaths, representing 7 per cent. of all deaths under one year, or 2.05 per 1,000 births. Diarrhoea and enteritis caused 296 deaths and other pneumonia 158.

(a) Included in figures for all children.

(b) Includes Icterus and Sclerema prior to 1931.

(vi) *Deaths of Ex-nuptial Children under one Year.* The deaths of ex-nuptial children were tabulated by this Bureau for the first time in 1925. The numbers of deaths of these children in 1948 and the rates in respect of 1925, 1931, 1941 and 1948 are shown in the preceding table. Corresponding figures for 1947 may be obtained from *Demography*

Bulletin No. 65. Full particulars of the causes of death of ex-nuptial children who died in 1948 aged under one year and also of those under one month are given for each State and Territory in *Demography Bulletin* No. 66. This contains, in addition, detailed information for Australia as to the age at which ex-nuptial children died from each cause of death.

Pre-natal influences, such as congenital malformations, congenital debility and premature birth, together with injuries at birth and other diseases of early infancy accounted for 156 or 58 per cent., diarrhoea and enteritis for 35 or 13 per cent., and broncho-pneumonia for 17 or 6 per cent. of the total deaths of ex-nuptial children under 1 year.

9. Deaths in Age-groups.—A distribution into age-groups has been made of the 364,795 deaths which occurred in Australia during the five years ended 1948, and the results are shown in the following table :—

AGGREGATE DEATHS IN AGE-GROUPS : AUSTRALIA, 1944 TO 1948.

Age-group (Years).	Number of Deaths.			Percentage of Total.		
	Males.	Females.	Persons.	Males.	Females.	Persons.
Under 1	14,168	10,615	24,783	7.06	6.47	6.79
1-4	3,249	2,542	5,791	1.62	1.55	1.59
5-19	4,786	2,893	7,679	2.38	1.76	2.11
20-39	10,918	10,325	21,243	5.44	6.29	5.82
40-59	41,330	28,291	69,621	20.59	17.25	19.08
60-64	21,038	13,323	34,361	10.48	8.12	9.42
65 and over ..	105,197	96,056	201,253	52.41	58.55	55.17
Age unspecified ..	52	12	64	0.02	0.01	0.02
Total	200,738	164,057	364,795	100.00	100.00	100.00

A table showing the corresponding percentages for earlier periods from the year 1901 has been added to show the movement over a longer term. The most striking change is the substantial decrease in the group "under 1 year". At the other end of the table, the group "65 years and over" has increased considerably. The percentages in all age-groups under 40 have fallen and those in all age-groups from 40 onwards have risen. These changes are due partly to improvement in the efficiency of medical science and partly to changes in the age distribution of the population. The latter changes are themselves in part due to increased length of life made possible by medical science, and in part to changes in the volume of migration and the falling birth-rate :—

10. Deaths at Single Ages and in Age-groups.—(i) *General.* The deaths registered in Australia in 1947 and 1948 will be found tabulated in groups of five years for each State and Territory and in single ages for Australia in *Demography Bulletins* Nos. 65-66, respectively. The deaths during the first fifteen years of life have been tabulated there in single ages and for the first year of life in shorter periods. A summary for Australia for 1948 is given in the following table:—

DEATHS AT SINGLE AGES AND IN AGE-GROUPS: AUSTRALIA, 1948.

(ii) *Rates.* The following table gives the average annual death-rates in age-groups per 1,000 living for the period 1946 to 1948, i.e., the Census year 1947 and the years immediately preceding and following. Deaths in the Northern Territory and the Australian Capital Territory are included in the total for Australia but not in any of the States. Similar details for the years 1932 to 1934 are given in Official Year Book No. 37, p. 778.

11. *Deaths of Centenarians.*—In previous issues of the Official Year Book, up to and including No. 33, particulars were given concerning persons aged 100 years and upwards who died each year. However, while the Registrars-General of the various States verify the ages as far as possible, absolute reliance cannot be placed on the accuracy of the information owing to the well-known tendency of very old people to overstate their ages, and it has been considered advisable to discontinue publication of this table. In

connexion with this question it may be noted that while parish registers in the United Kingdom often date very far back, compulsory registration of births dates practically from 1874 only, the Act of 1836 having left many loopholes for those unwilling to register the births of their children.

12. Length of Residence in Australia of Persons who Died.—Since 1940 the tabulation respecting the length of residence in Australia of all persons whose deaths were registered during the year has been discontinued. Details for the year 1940 appear in *Official Year Book No. 37*, pp. 779–80.

13. Birthplaces of Persons who Died.—A table giving a summary of birthplaces of persons whose deaths were registered in 1911 and 1940 will be found in *Official Year Book No. 34*, p. 337. More detailed information will be found in *Demography Bulletin No. 58*. Tabulations were discontinued for the years 1941 to 1945 inclusive but were revived for 1946. Details for 1948 appear in *Demography Bulletin No. 66*.

14. Occupation of Males who Died.—A table showing occupations of males who died during 1948 appears in *Demography Bulletin No. 66*.

15. Causes of Deaths.—(i) *General.* The classification adopted by this Bureau is that of the International Institute of Statistics, as amended by the Committees of Revision which met in Paris in 1909, 1920, 1929 and 1938.

(ii) *Mortality Statistics for 1907 and Subsequent Years.* The statistics relating to causes of death in Australia from 1907 onward have been tabulated in this Bureau in accordance with the above-mentioned classification, and the system is employed also in the State statistical offices. Particulars from 1940 onward have been tabulated on the 1938 revision of the International List.

(iii) *Classification of Causes of Death, according to the Intermediate and the Abridged International Classifications.* An abridged classification, which enumerates forty-three diseases and groups of diseases according to the revised classification, was formerly in use in many European countries and American States, and a table has been given in past issues of the *Official Year Book* showing the causes of death according to the abridged classification, so that the results may be compared with those of other countries which used the abridged index.

As the result of an international treaty signed in London in 1934, the intermediate classification of causes of death, or the “minimum nomenclature” covering 87 main causes or groups of causes, has now been adopted in most countries for the purpose of making international comparisons. This classification appears in the pages following and shows the number of deaths during 1948 in Australia for each cause enumerated. To preserve continuity with former statistics, particulars for 1948 have been compiled in the abridged form and are shown on p. 632 in conjunction with those for the previous four years, and averages over five-yearly periods to 1941–45 are shown in the same form on p. 633.

The compilations for the years 1944 to 1948 will be found in full detail in *Demography Bulletins Nos. 62 to 66*. In the following tables in which the intermediate classification has been employed, tables A, B and C show deaths of males, females and persons, respectively, for 1948. Table D shows in the abridged form, on the basis of the 1938 revision of the International List, the number of persons who died in each of the years 1944 to 1948 and gives the rate per million of population for the last-named year.

Since death-rates are subject to continual fluctuation, it is unsafe to base deductions on the figures relating to a single year. In order, therefore, to furnish a valid basis for comparison, three five-yearly periods have been shown in table E giving the number of deaths and the rates per million persons.

A.—CAUSES OF DEATH : MALES, 1948.

INTERMEDIATE CLASSIFICATION.

(Figures in parentheses indicate the abridged classification number in each instance.)

NOTE.—All causes of death have been classified in accordance with the 1938 revision of the International List.

16. Deaths from Principal Specific Causes.—(i) *General*. In the preceding tables particulars have been given for each of the causes of death comprising the Intermediate and the Abridged Classifications. The more important of these causes are treated in detail hereunder. The Intermediate Classification number is indicated in parentheses for each cause or group of causes.

(ii) *All Forms of Tuberculosis* (6, 7). (a) *General*. The total number of deaths in 1948 was 2,169, consisting of 1,449 males and 720 females.

(b) *Age at Death*. The following table shows the age-groups of males, females and persons who died from this disease in 1948, together with comparable figures for 1921, 1931 and 1941.

(g) *Death-rates, Various Countries.* The following table shows the death-rates from tuberculosis for Australia and each State in comparison with the rates for various other countries. Figures are for the latest available year in each case. The table indicates that Australia occupies a very favourable position as regards the death-rate from this disease.

TUBERCULOSIS : DEATH-RATES (a), VARIOUS COUNTRIES.

Country.	Year.	Respiratory System.	All Forms.	Country.	Year.	Respiratory System.	All Forms.
Denmark.. ..	1948	21	25	Northern Ireland	1947	57	72

(a) Number of deaths per 100,000 of mean population. (b) Excludes full-blood aboriginals.
 (c) European population only. (d) Excludes Maoris. (e) Not available. (f) In towns with over 100,000 inhabitants.

(iii) *Cancer and other Malignant Tumours (18 to 23).* (a) *General.* The number of deaths from cancer increased continuously to 6,256 in 1929, declined slightly to 6,120 in 1930, but rose again progressively to 9,671 in 1948.

(b) *Type and Seat of Disease.* Tables showing the type and seat of disease, in conjunction with age and with conjugal condition of the persons dying from cancer in 1947 and 1948 will be found in *Demography Bulletins* Nos. 65 and 66. A summary regarding type and seat of disease for 1948 is given below. It may be pointed out that the significance of the number of deaths shown for the various types of cancer enumerated hereunder is doubtful, owing to the fact that, in the absence of a post-mortem, it is impracticable for the certifying doctor in the majority of cases to make an accurate diagnosis as to type in the detail required for the following classification.

DEATHS FROM CANCER: TYPE AND SEAT OF DISEASE, AUSTRALIA, 1948.

(c) *Age at Death.* The ages of persons who died from cancer in 1921, 1931, 1941 and 1948 are given below. Inferences drawn from the great increase in the number of deaths from cancer in 1948 compared with 1921 need qualification in view of the altered age constitution of the population since the earlier year. The number of people reaching the older ages at which cancer risks are greatest more than doubled during this period and it is only in the extreme old age-groups from 75 onwards that the rate of mortality has definitely increased. For groups up to age 75 there has been no increase in mortality rates since 1921. In the higher age-groups the increase in the rate for females has been relatively greater than that in the rate for males. It is also probable that a proportion of the increased number of deaths from cancer recorded in recent years has been due to more correct diagnosis and certification on the part of medical practitioners rather than to any actual increase in the disease itself.

(a) Number of deaths per 100,000 of mean population. (b) In towns with over 100,000 inhabitants. (c) European population only. (d) Excludes full-blood aborigines.

(e) Excludes Maoris.

(h) *Comparison with Tuberculosis.* In recent years the death-rate from tuberculosis has shown a tendency to decrease, while that from cancer has displayed an almost continuous increase. The table hereunder shows that for each of the periods under review the decline in the death-rate from tuberculosis has been accompanied by an almost equal increase in the rate for cancer. Thus in the forty-five years comprised in the five-yearly averages shown below the death-rate for tuberculosis declined by 57 while the rate of cancer increased by 57 per 100,000 persons. This equal but opposite tendency may be demonstrated by stating that the death-rate from tuberculosis and cancer combined remained almost constant in each period, the figures being :—1901-05, 152 deaths per 100,000 persons; 1906-10, 145; 1911-15, 152; 1916-20, 154; 1921-25, 153; 1926-30, 152; 1931-35, 150; 1936-40, 154; 1941-45, 156; and 1948, 153.

TUBERCULOSIS AND CANCER : DEATH-RATES(a), AUSTRALIA.

1948.. ..	38	19	28	127	124	125

(a) Number of deaths per 100,000 of mean population.

(iv) *Diseases of the Heart* (42 to 46). The number of deaths in 1948 was 24,262, namely, 14,199 males and 10,063 females. Details for each individual disease of the heart may be obtained from *Demography Bulletin* No. 66. The sex and territorial distribution of the deaths will be found in the table below. This class is the largest among causes of death, the death-rate having grown from 1,019 per million in 1911-15 to 2,705 in 1939-43 and 3,146 in 1948. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past sixteen years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners. Many deaths of elderly people, formerly attributed to senility or other indefinite causes, are believed to be now more frequently certified as associated with some form of heart disease, usually myocardial degeneration. The improvement in diagnosis has been particularly evident in the case of diseases of the coronary arteries. As a result of a change of classification adopted in 1931, all forms of this disease have been included since that year among heart diseases. Although deaths recorded from diseases of the coronary arteries were not numerically important in 1931, this type of disease has since become prominent in medical science, and in 1948 the number of deaths assigned to this cause was 7,800, an increase of 7,236, or over 1,380 per cent., since 1931. The number of deaths, death-rates and proportions per 10,000 deaths in 1948 are given in the following table. Corresponding figures for 1917 may be obtained from *Demography Bulletin* No. 65.

DISEASES OF THE HEART : DEATHS, DEATH-RATES AND PROPORTION PER 10,000 TOTAL DEATHS, 1948.

(a) Number of deaths from diseases of the heart per 100,000 of mean population.

(v) *Diarrhœa and Enteritis (Children under two years of age)* (54). The number of deaths due to these causes was 335 in 1948 compared with an average of 284 for the previous five years. During 1948, 5,475 children died before reaching their second birthday, and of these 6.1 per cent. died from diarrhœa and enteritis. The ages of children dying from these diseases during the first year of life will be found on page 621.

The number of deaths under 2 years of age due to diarrhœa and enteritis, the death-rates, and proportions per 10,000 deaths for 1911-15, 1921-25, 1931-35, 1936-40, 1941-45 and 1948 are given in the following table. (Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65. Reference to the last five lines of the table reveals a general decrease in the number of deaths due to these diseases. Although there were increases in 1947 and 1948 they were still below the averages for the five-yearly periods shown below. In view of changed birth-rates, however, the death-rates per 100,000 of mean population are not true measures of changes in the force of mortality. A better measure would be the estimated number of children in every 1,000 born who died from these diseases before reaching their second birthday. The numbers are estimated to be as follows :—

Period—	1911-15	Males, 24.6	Females, 20.9	Total, 22.8
"	1921-25	" 16.5	" 13.3	" 14.9
"	1931-35	" 3.7	" 2.8	" 3.3
"	1936-40	" 3.4	" 2.7	" 3.0
"	1941-45	" 2.7	" 2.1	" 2.4

(a) Number of deaths from these diseases per 100,000 of mean population.

(vi) *Puerperal Causes* (68 to 72). The 250 deaths in 1948 from puerperal causes correspond to a death-rate of 9.6 per 100,000 females. The rate is also equivalent to 1.40 deaths per 1,000 live births. The death-rate may be expressed in other terms by stating that 1 of every 704 women giving birth to a live child in 1948 died from puerperal causes; the corresponding ratios for married women were 1 of every 751, and for single women 1 in every 285. More detailed information will be found in a series of tables in *Demography Bulletin* No. 66.

The following table shows the death-rate per 1,000 live births from puerperal causes in various countries. Care is needed in comparing the Australian rates with the figures for other countries. In the rates for the States and Australia deaths from criminal abortion have been excluded from puerperal infection but included with deaths from other puerperal causes and in the total. Definite information is not available as to the practice in other countries but it is very probable that the rates for many of the countries given hereunder totally exclude deaths from criminal abortion.

CHILD-BIRTH: DEATHS PER 1,000 LIVE BIRTHS, VARIOUS COUNTRIES.

(a) Excludes full-blood aborigines.
(d) Localities having Health Bureaux.

(b) European population only.

(c) Excludes Maoris.

A tabulation of puerperal causes for Australia according to age at death for married and single women separately will also be found in *Demography Bulletin* No. 66.

The total number of children left by the 225 married mothers who died from puerperal causes in 1948 was 519, an average of 2.3 children per mother.

Nine of the mothers who died had been married less than one year, 27 between one and two years, and 27 between two and three years. The duration of marriage ranged up to 24 years. Tabulations distinguishing the ages at marriage and at death will be found in *Demography Bulletin* No. 66, which also includes a table showing in combination the duration of marriage and previous issue.

(vii) *Congenital Malformation, Debility, Premature Birth, etc.* (75 to 79). The deaths under this heading in 1948 numbered 3,624 of which 3,477 were of children under one year of age. Of all deaths of children under one year of age 70 per cent. were due to these causes. The number of deaths for 1948 is given in the following table. Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65.

DEATHS FROM CONGENITAL MALFORMATION, DEBILITY, ETC., 1948.

State or Territory.	Congenital Malformation.			Premature Birth and Injury at Birth.			Congenital Debility and other Diseases peculiar to the First Year of Life.

(a) Number of deaths per 100,000 of mean population.

(b) European population only.

(c) Excludes full-blooded aborigines.

(d) Excludes Maoris.

(e) In towns with over 100,000 inhabitants.

(ix) *Homicide* (82). Deaths from homicide in 1948 numbered 88, which was 3 less than in the previous year and 5 more than the average for the five years 1941 to 1945, namely, 83. See par. (x).

(x) *Accidental or Violent Deaths (including Suicide and Homicide)*. The following table shows the various kinds of violent deaths, including suicides and homicides, recorded in Australia for 1948. Corresponding figures for 1947 may be obtained from *Demography Bulletin* No. 65.

DEATHS FROM EXTERNAL VIOLENCE : AUSTRALIA, 1948.

Cause of Death.	Males.	Females.	Persons.
Suicide (<i>see par. (viii)</i>)	578	159	737
Homicide	52	36	88
Accidents on railways	160	18	178
Automobile accidents	1,097	231	1,328
Other road transport accidents	104	19	123
Water transport accidents	21	..	21
Air transport accidents	46	6	52
Accidents in mines and quarries	44	..	44
Agricultural and forestry accidents	83	..	83
Accidents caused by machinery (n.e.i.)	36	1	37
Accidental poisoning	57	39	96
Accidental burns (including conflagration)	136	67	203
Accidental mechanical suffocation	41	26	67
Accidental drowning	311	61	372
Accidental injury by firearms	62	4	66
Accidental injury by cutting or piercing instruments	1	..	1
Accidental injury by fall, crushing, landslide, etc... .. .	434	487	921
Injuries by animals (n.e.i.)	17	2	19
Hunger or thirst	2	..	2
Excessive cold	3	..	3
Excessive heat	10	6	16
Electricity (including lightning)	51	4	55
Attack by venomous animals	6	3	9
Other accidents	176	67	243
Legal executions
External Violence, excluding Suicide and Homicide	2,898	1,041	3,939
Total Deaths from External Violence	3,528	1,236	4,764

The following table of death-rates per million of mean population reveals a decrease in 1921-25 for External Violence, excluding Suicide and Homicide, but an increase in the rates for 1926-30 to which the growth of automobile accidents contributed very largely. A decreased death-rate was recorded during 1931-35, but the rate rose again during 1936-40. The sharp decline during 1941-45 may be attributed to the decrease in number of automobile accidents which resulted from the war-time restrictions of travel.

DEATH-RATES, ETC., EXTERNAL VIOLENCE : AUSTRALIA.

(a) Number of deaths per 1,000,000 of mean population.

(xi) "Other Diseases". The intermediate and the abridged classifications of causes of death used in Tables A to E in preceding pages differ from those used in issues of the Official Year Book prior to No. 25 in that no residue of "other diseases" is shown at the foot. The items are ranged in classes or groups of classes and each class or group of classes is made complete by the addition of an "other diseases" item for that class or group of classes. Details of these "other diseases" items of the intermediate classification expanded into their constituent causes may be found in *Demography Bulletin* No. 66.

The following table shows the number of deaths during each of the five years 1944 to 1948 from the four most important "other" infective and parasitic diseases.

DEATHS FROM OTHER DISEASES : AUSTRALIA.

17. Causes of Deaths in Classes.—The figures in the preceding sub-sections relate to specific causes of death, and are of greater value in medical statistics than a mere grouping under general headings. The classification under eighteen general headings adopted by the compilers of the International Nomenclature is, however, shown in the following table for 1948, together with the death-rates and proportions of total deaths

pertaining to those classes. A further table furnishes the death-rates for the five-year periods 1921-25, 1931-35 and 1941-45. Figures for 1947 corresponding to the first table may be obtained from *Demography Bulletin* No. 65.

(a) Number of deaths per 100,000 of mean population.

18. Age at Death of Married Males and Females, and Issue.—*Demography Bulletin* No. 66 contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married persons who died in Australia in 1948. Deaths of married males in 1948 numbered 30,234, and of married females, 26,238. The tabulations which follow deal, however, with only 29,711 males and 25,958 females, the information regarding issue in the remaining 803 cases being incomplete. The total number of children in the families of the 29,711 males was 104,942, and of the 25,958 females, 99,680. The average number of children is shown for various age-groups in the following table :—

AGE AT DEATH, AND AVERAGE ISSUE OF MARRIED MALES AND FEMALES : AUSTRALIA.

Age-group (Years).	Average Issue.									
	Males.					Females.				
	1911.	1921.	1931.	1941.	1948.	1911.	1921.	1931.	1941.	1948.

20. Birthplace of Deceased Married Males and Females, and Issue.—A table showing the birthplaces of married males and females who died in 1911 and 1940, together with the average issue, may be found in the Official Year Book No. 34, p. 366.

21. Occupation of Deceased Married Males, and Issue.—A summary of the main groups of occupations of married males who died during 1948, together with issue, appears in *Demography Bulletin* No. 66.

§ 4. Registration of Births, Deaths and Marriages in the Australian Capital Territory.

To the end of 1929 the provisions of the Registration of Births, Deaths and Marriages Act of 1800 and the Marriage Act of 1800 of New South Wales applied to the Australian Capital Territory. Births, deaths and marriages occurring within the Territory were registered by the District Registrars at Queanbeyan and Nowra, and were incorporated in the New South Wales records.

In 1929, however, the Registration of Births, Deaths and Marriages Ordinances were enacted, providing for the assumption by the Commonwealth Government of the function of registration within the Territory as from 1st January, 1930. All registrations are made at the Registrar's Office, Civic Centre, Canberra.

Marriages within the Territory are celebrated according to the conditions prescribed by the Marriage Ordinance 1929-1938. This Ordinance, which closely follows the provisions of the Marriage Act of New South Wales, which it supersedes as regards the Australian Capital Territory, came into operation on 1st January, 1930.

CHAPTER XV.

LOCAL GOVERNMENT.

§ 1. Introduction.

1. **General.**—The statistics on Local Government operations are not entirely satisfactory, as they are incomplete, and not sufficiently comparable and up to date. Those on Local Government financial operations were improved, prior to the 1939-45 War, through the use by the State Statisticians of standard forms in supplying information on their respective States to the Commonwealth Statistician. The presentation of the statistics thus made available was only being developed when the war made it necessary to discontinue the returns. However, since the war they have been recommenced, and the matter in § 2, advanced and extended in the previous issue of the Official Year Book, has been further extended, particularly in regard to Local Government (and Semi-governmental) debt.

Efforts are being made, as opportunity and circumstances permit, to widen the range of information presented on local government activities beyond the purely, or primarily, financial.

2. **Local Government Authorities.**—In each State of the Commonwealth there exists a system of local government whose powers and responsibilities are in general similar, covering such matters as the upkeep and construction of roads and bridges, water and sewerage systems (except in most of the chief cities), health, sanitary services and conditions, lighting, supervision of building, and the administration of acts dealing with certain subjects (e.g., dog acts, food and drug acts, slaughtering acts, weights and measures acts, etc.). In addition to these obligatory functions there are also a large number which may be performed by local government authority either with or without the consent of the ratepayers or the governor-in-council. These include transport facilities, electricity, gas and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths, libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the governor-in-council. Otherwise, within the scope of the acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers.

While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc., differ considerably.

The areas over which local government bodies exercise general control, numbering 970, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs and shires; in Queensland as cities, towns and shires; in South Australia as municipal corporation areas and district council areas; in Western Australia as municipalities and road districts; and in Tasmania as municipalities. In New South Wales some local government authorities in an area have combined to provide services such as electricity supply and water and sewerage—e.g., the county councils. There are also some municipal units within shires known as urban areas. In Western Australia there are local health boards, whose personnel in most cases coincides with those of municipalities and road boards. Apart from the more thinly populated parts of New South Wales and South Australia and the Federal Territories, practically the whole of Australia comes within local government jurisdiction.

The financial statistics in § 2. following are classified under the headings of Ordinary Services and Business Undertakings, the former covering the obligatory and general functions referred to above and also those other functions apart from business undertakings. Business Undertakings includes particulars of public utilities such as water supply and sewerage, electricity and gas, transport and hydraulic power undertakings, and other miscellaneous works such as abattoirs, quarries, ice works, cinemas, etc.

A description of the various systems of municipal governments in the different States, and their development from the earliest date, was published in 1919 by this Bureau in a separate work entitled *Local Government in Australia*. In this publication the systems in force at that time are examined, the development of local government in Australia is traced since its inception, and all available statistical information is collected.

3. Semi-Governmental Authorities.—The business undertakings covered by the statistics in § 2 do not include all those public business undertakings whose finances do not form part of the general budget revenue and expenditure of the central government. There is also a large number of authorities set up to control specific activities.

Their forms of activity are often identical with some of those performed by either, or both, of the other classes of public authority—central government and local government—and a complete picture of any field of activity for the State or Australia as a whole cannot be obtained without reference to each class operating in that particular field. These semi-governmental authorities differ primarily from local government authorities in that the operations of each of the former are restricted to the one or two forms of activity for which it was specifically constituted—e.g. roads and bridges, or water and sewerage, or electricity and irrigation, or harbours, or tramways, etc.—i.e. each dispenses a specific service throughout an area as distinct from the general services of the local authority. (It may be well to note here that the county councils in New South Wales, although constituted for a specific purpose or purposes, are included as local government authorities in § 2, because they are combinations of municipalities and shires.)

Sections 4 to 7 following, dealing with roads and bridges, water supply and sewerage, harbours and fire brigades, include particulars of the more important of these authorities which operate within the range covered by this chapter. A detailed list of the authorities classed as semi-governmental from whom returns of loan operations are received appears on pages 662–3, § 3, par. 2 following.

4. Roads, Bridges, etc.—The construction and maintenance of roads, bridges and ferries are generally part of the functions of local authorities, but in each State there exists a central road authority or a Government department whose duties relate to the construction and maintenance of “main” and “developmental” roads, the distribution of funds to local bodies, and the supervision and co-ordination of road construction and policy throughout the State. Although roads and bridges constructed and maintained directly by the Government or by the central road authority do not properly come under the heading of “Local Government”, they have been included in this chapter for the sake of convenience. Owing to difficulty in obtaining complete particulars of receipts and expenditure by the various local governing bodies in regard to roads under their control, the details of receipts and expenditure given in § 4 are those of the Government only, relating either to the supervisory board or commission in the State or to direct activities of a department. In § 2 some information is given of the revenue and expenditure of Local Government Authorities in respect of roads.

5. Water Supply and Sewerage.—In the cities of Sydney and Melbourne the control of water supply and sewerage is in the hands of special Boards, while in Adelaide and Perth these services are under the direct supervision of Government departments. In most of the other cities and towns, the municipal councils, or, in some cases, water trusts, are the controlling bodies which either construct the works out of their own resources or take them over after they have been constructed by the Government.

6. **Harbours.**—The majority of the harbours in Australia are managed by Boards, the members of which are either elected by persons interested, or are appointed by the Government. In a few instances, however, they are directly controlled by the Government.

7. **Fire Brigades.**—In all the States, the management of fire brigades is undertaken by Boards. These Boards usually comprise members elected by the councils of municipalities and insurance companies within the districts placed under their jurisdiction, and one or more members appointed by the Government. Occasionally volunteer or country fire brigades are represented.

8. **Other Local Government Activity.**—The activities referred to above are not the only forms of local government undertakings. There are others, the most important being tramways and omnibus services, and electric light and gas undertakings, whose control generally is less restricted to local government authorities. These are not dealt with in this chapter, except to the extent that they are represented in the finances as shown in the following section. Chapter V.—Transport and Communication contains information on municipal transport services, while particulars of electric light and gas undertakings, although not shown separately, are included in the relevant sections in Chapter XXIV.—Manufacturing Industry.

§ 2. Local Government Authorities.

1. **Area, Population, Dwellings and Value of Ratable Property.**—(i) *New South Wales.* For purposes of local government the whole of the Eastern and Central land divisions and a small portion of the sparsely populated Western division have been divided into cities, municipalities (most principal towns) and shires (mainly large rural areas, some of which embrace important towns). At the end of 1946 the area incorporated was 184,000 square miles, or nearly three-fifths of the total area of the State.

The Local Government (Areas) Act 1948 repealed the Sydney Corporation Act 1932 which had regulated the operations of the Capital City. It unites the City of Sydney and certain areas, constituting the united area as a city; unites certain other areas or areas and parts of areas, constituting them as municipalities; and reconstitutes the Sydney County Council. All local government authorities in the State are now subject to the general provisions of the Local Government Act.

Municipalities and shires may combine to form county councils for the establishment and conduct of services of joint benefit, e.g., electricity, water, sewerage. There were 16 county councils and the Grafton and South Grafton Water Board at 31st December, 1946.

The area, population, dwellings and value of ratable property in the incorporated areas for the year ended 31st December, 1946 are shown in the table below. The valuations relate to ratable property only and exclude Government and other non-ratable property, whose value is not inconsiderable in the aggregate. In this table, and in the corresponding tables for other States, particulars of dwellings are in accordance with the definition used in the 1947 Census, and are the results of information collected on the Census schedules. Occupied dwellings include individual private houses, flats and tenements, and dwellings other than private (boarding houses, hotels, caretakers' quarters, hospitals, educational establishments, etc.). Also included are portions of shared private houses in respect of which portions separate householders' schedules were furnished. Unoccupied dwellings include "week-end" and holiday dwellings and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

LOCAL GOVERNMENT AUTHORITIES, NEW SOUTH WALES : AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1946.

Local Bodies.	Number.	Area.	Population. (a)	Dwellings.(a)		Value of Ratable Property.

(b) Nine-tenths annual rental value of land with improvements thereon. (c) Excludes whole of municipality of Holroyd. (d) Includes City of Greater Newcastle. (e) Not available. (f) Includes 42,253 shares of private houses—see above.

(ii) *Victoria.* Local Government is established throughout the State, the various divisions being termed cities, towns, boroughs, or shires. The only unincorporated areas are French Island in Westernport Bay (42,000 acres), Julia Percy Island, off Port Fairy (650 acres), and Tower Hill, adjacent to the Borough of Kororoit (1,350 acres). Melbourne and Geelong were incorporated under special statutes prior to the establishment of a general system of local government, but are now subject to several provisions of the Local Government Act. The law relating to local government was consolidated by the Local Government Act 1946.

As from 1st January, 1947, the metropolitan area for statistical and health purposes was redefined by the inclusion of the city of Nunawading, the borough of Ringwood, the Broadmeadows and Campbellfield ridings of the shire of Broadmeadows, the Doutta Galla riding of the shire of Keilor and the shire of Mulgrave.

The area, population, dwellings and estimated value of ratable property in the incorporated areas for the year ended 30th September, 1947 are shown below :—

LOCAL GOVERNMENT AUTHORITIES, VICTORIA : AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1946-47.

(a) As at Census, 30th June, 1947.

(b) Includes the whole of the city of Heidelberg, the borough of Ringwood, and the whole of the shires of Braybrook, Broadmeadows and Keilor. (c) Includes 36,782 shares of private houses—see par. 1 (i) above.

Particulars of the unimproved capital value are not available.

(iii) *Queensland.* The whole of the State (except certain islands along the coast, the Dawson Valley Irrigation Area and the Somerset Dam Area) is incorporated into cities, towns and shires under the Local Authorities Act 1902 and its amendments. The following table shows particulars of the area, population, dwellings and value of ratable property in the incorporated areas for the year ended 30th June, 1947:—

LOCAL GOVERNMENT AUTHORITIES, QUEENSLAND: AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1946-47.

houses—see par. 1 (i) above.

(b) Not available.

(c) Includes 15,324 shares of private

(v) *Western Australia.* In this State, Local Government is carried on by means of municipalities and district road boards. Certain functions are delegated to health boards, whose personnel, in most cases, coincides with those of the municipalities and district road boards. The following table shows particulars of the area, population, dwellings and value of ratable property in incorporated areas for the year ended October, 1947 for municipalities, and the year ended June, 1947 for district road boards.

LOCAL GOVERNMENT AUTHORITIES, WESTERN AUSTRALIA: AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1946-47.

(a) As at Census, 30th June, 1947. (b) Not available. (c) Includes part only (8,064 acres) of Swan River District situated in Metropolitan Area. (d) Includes 6,455 shares of private houses—see par. 1 (i) above.

The method of valuation is not identical in the case of all district road boards, as in some the assessment is based on the unimproved capital value and in others partly on the unimproved capital value and partly on the annual value. The amounts shown are the totals for the areas rated on each valuation, and are not a function of each other.

(vi) *Tasmania.* The whole State is divided into municipal districts, Hobart and Launceston being incorporated under separate Acts. The Hobart Corporation Act was consolidated in 1947. The following table shows particulars of the area, population, dwellings and value of ratable property in incorporated areas for the year ended June, 1947.

LOCAL GOVERNMENT AUTHORITIES, TASMANIA: AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1946-47.

(a) As at Census, 30th June, 1947.

(b) Comprises the whole of the Municipalities of Clarence and Glenorchy.

(c) Includes 4,911 shares of private houses—see par. 1 (i) above.

2. **Finances.**—(i) *General.* As the result of resolutions adopted at a conference of Statisticians in 1936 the financial statistics of Local Government Authorities were compiled in the various States on a more comparable basis than formerly. The collection of this information was suspended in most States for the duration of the war, but has now been resumed. The tables following show the latest figures available, which, except for the State of New South Wales where the figures relate to the year 1946, refer to the year 1946-47.

(ii) *Ordinary Services.* (a) *Details.* In the returns of revenue and expenditure for 1946-47 in the following table the proceeds from loans and expenditure thereof have been excluded, as have the operations of business undertakings controlled by the various Local Government Authorities. The profits resulting from the working of these undertakings, where taken into general revenue, have been included.

§ 3. Local and Semi-Governmental Authorities' Debt.

1. *General.*—Previous issues of the Official Year Book (*see* No. 36, page 595) have contained particulars of Local and Semi-Governmental Debt up to and including 1940-41. These particulars were compiled from returns collected prior to the 1939-45 War. Because of difficulties created by the war this collection was discontinued after 1940-41, but was resumed in 1946-47. The information in the following table has been compiled from returns furnished by all Local Government Authorities and those Semi-Governmental Authorities listed in the following paragraph.

2. *Semi-Governmental Authorities furnishing Returns.*—The following Semi-Governmental Authorities supplied returns of debt liability for the year ended 30th June, 1947 :—

New South Wales. *Water Supply and Sewerage.*—Metropolitan Water, Sewerage and Drainage Board, Hunter District Water Board, Broken Hill Water Board, and County Councils. *Electricity Supply.*—County Councils. *Fire Brigades.*—Board of Fire Commissioners. *Banking.*—Rural Bank of New South Wales.

Victoria. *Water Supply and Sewerage.*—Melbourne and Metropolitan Board of Works, Ballarat Water Commission, Geelong Water Works and Sewerage Trust, Mildura Urban Water Trust, Waterworks Trusts and Sewerage Authorities. *Irrigation and Drainage.*—First Mildura Irrigation Trust and Trafalgar Meadows Drainage Trust. *Harbours.*—Melbourne Harbour Trust and Geelong Harbour Trust. *Tramways.*—Melbourne and Metropolitan Tramways Board. *Electricity Supply.*—State Electricity Commission. *Fire Brigades.*—Metropolitan Fire Brigades Board and Country Fire Authority. *Marketing, Buying and Selling.*—Western Metropolitan Marketing Trust. *Grain Elevators.*—Grain Elevators Board. *Banking.*—State Savings Bank (Crédit Foncier Department). *Housing.*—Housing Commission of Victoria.

- Queensland.** *Water Supply and Sewerage.*—Coolangatta-Nerang Water Supply Board, Stanley River Works Board, Cairns-Mulgrave Water Supply Board and Bore Water Supply Boards. *Irrigation and Drainage.*—Inkerman Irrigation Board (Water). *Harbours.*—Harbour Boards, Harbour Dues Fund, River Works Board, Brisbane Harbour Loans Fund, Brisbane Graving Dock, Burdekin River Trust Fund. *Electricity Supply.*—Barron Falls Hydro-Electricity Board, Inkerman Irrigation Board (Electricity), Capricornia Regional Electricity Board, Cairns Regional Electricity Board, Wide Bay Regional Electricity Board. *Roads and Bridges.*—Lamington Bridge Board, Main Roads Commission. *Trading Activities.*—State Coal Mines, Chillagoe State Smelters, State Coke Works, Irvinebank State Treatment Works. *Fire Brigades.*—Fire Brigades. *Universities.*—University Works Board. *Hospitals and Ambulances.*—Hospitals and Ambulances. *Marketing, Buying and Selling.*—Queensland Meat Industry Board, Atherton Tableland Maize Board, Northern Pig Board, Queensland Barley Board, Queensland Cotton Board, Queensland Egg Board, Queensland Peanut Board, Queensland Butter Board, Queensland Sugar Board, Queensland Ginger Board, and Fish Supply Fund. *Marketing Agency.*—Queensland Arrowroot Board, Committee of Direction Fruit Marketing, Queensland Broom Millet Board, Queensland Cheese Board, Queensland Honey Board, Queensland Plywood and Veneer Board, Northern Plywood and Veneer Board, State Wheat Board, State Fish Board, Queensland Central Coal Board, West Moreton District Coal Board, Maryborough District Coal Board, Central District Coal Board and Darling Downs District Coal Board. *Industry Improvement.*—Queensland Dairy Products Stabilization Board, Dairy Cattle Improvement Fund, Queensland Cane Growers Council, Council of Agriculture, Stock Diseases Fund, Brands Act Fund, Moreton Rabbit Board, Darling Downs Rabbit Board, Leichhardt Rabbit Board, Toowoomba Pest Destruction Board, Brisbane and East Moreton Pest Destruction Board, Banana Industry Fund, Sugar Cane Prices Fund, Sugar Fund, Buffalo Fly Control Fund and the Stock Routes and Pest Destruction Fund. *Banks.*—Agricultural Bank Fund. *Miscellaneous.*—Aboriginal Welfare Fund and Committee of Reconstruction Training Fund.
- South Australia.** *Irrigation and Drainage.*—Renmark Irrigation Trust. *Tramways.*—Municipal Tramways Trust. *Electricity Supply.*—Electricity Trust of South Australia. *Fire Brigades.*—Fire Brigades Board. *Hospitals and Ambulances.*—Metropolitan Infectious Diseases Board, Adelaide Children's Hospital and Public Hospitals. *Marketing, Agency.*—Dried Fruits Board and Metropolitan and Export Abattoirs Board. *Industry Improvement.*—Vermin Boards. *Banking.*—State Bank. *Housing.*—South Australian Housing Trust. *Miscellaneous.*—Centennial Park Cemetery Trust, Enfield General Cemetery Trust, Institute of Medical and Veterinary Science, and School of Mines and Industries.
- Western Australia.** *Water Supply and Sewerage.*—Water Boards. *Irrigation and Drainage.*—Drainage Boards. *Harbours.*—Fremantle Harbour Trust and Bunbury Harbour Board. *Tramways.*—Western Australian Transport Board and Eastern Goldfield Transport Board. *Fire Brigades.*—Western Australian Fire Brigades Board. *Hospitals and Ambulances.*—Perth Hospital, Children's Hospital. *Marketing.*—Metropolitan Milk Board, Western Australian Alumite Industry, Dried Fruits Board, The Western Australian Barley Marketing Board, State Gardens Board, Western Australian Marketing Board, Dairy Products Marketing Board and Charcoal Iron and Steel Industry. *Housing.*—McNess Housing Trust and State Housing Commission. *Miscellaneous.*—King's Park Board, Karrakatta Cemetery Board, Fremantle Cemetery Board and State Government Insurance Office.
- Tasmania.** *Harbours.*—Marine Boards and Harbour Trusts. *Fire Brigades.*—Hobart Fire Brigade.

3. Local and Semi-Governmental Authorities' Debt, 1946-47.—The following table provides a summary of new money loan raisings, provisions for the redemption of debt, debt outstanding and interest payable, of local and semi-governmental authorities for the year ended 30th June, 1947. For greater detail see *Finance Bulletin* No. 39, 1947-48, published by this Bureau.

Maturing Overseas (a)(b) ..	9,994	5,558	..	1,188	16,740
Interest Payable (a) ..	(c)	2,514	649	720	231	23	(c)

(a) Includes debt or interest payable in London and New York. The former is expressed in United Kingdom currency, the latter is payable in dollars which have been converted at the rate of 4.8665 dollars to £1. (b) Included in debt figures above. (c) Not available.

In the table above, debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalized and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more have been included. Current liabilities, such as interest accrued (but not capitalized), trade creditors, amounts held in trust and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised to repay indebtedness to the Government and interest capitalized. Loans raised and redeemed within the year, increases in overdrafts and loans raised for conversion or redemption of existing debt are excluded. Principal repaid excludes principal repaid from sinking funds or the proceeds of any conversion or redemption loan. The amount credited to sinking funds includes amounts contributed from revenue, etc., sources and earnings on sinking fund investments credited to the sinking fund.

§ 4. Roads and Bridges.

1. **Commonwealth Government Grants.**—The following table shows particulars of the amounts paid from Consolidated Revenue Fund by the Commonwealth Government, under the Commonwealth and Federal Aid Roads and Works Acts, to the several States for road construction, maintenance and repair and other works connected with transport during the years 1938–39 and 1943–44 to 1947–48. Particulars of payments for the construction and maintenance of strategic roads and for the promotion of road safety practices made in 1947–48 are excluded. In addition, particulars are shown of the aggregate grants for these purposes for the years 1922–23 to 1947–48, under Commonwealth and Federal Aid Roads and Works, and Main Roads Development, Acts. For further particulars see Chapter XVII.—Public Finance, Payments to or for the States.

ROAD CONSTRUCTION, MAINTENANCE, ETC.: GRANTS BY COMMONWEALTH GOVERNMENT.

(£'000.)

Year ended 30th June—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
1939 (a)	1,199	747	815	474	819	213	4,267
1944 (a)	131	330	360	210	362	94	1,487
1945 (a)	619	385	420	244	423	110	2,201
1946 (a)	935	582	636	369	639	167	3,328

Aggregate years 1922–23 to 1947–48 (c)	17,866	11,327	12,157	7,177	12,294	3,200	64,021

(a) Under Federal Aid Roads and Works Acts. (b) Under Commonwealth Aid Roads and Works Acts, except for £398,830 to New South Wales under Federal Aid Roads and Works Acts, representing amounts not drawn by that State during 1943–44 and 1944–45. (c) Under Commonwealth and Federal Aid Roads and Works, and Main Roads Development, Acts.

In addition to the foregoing amounts, financial assistance from loan fund has been granted by the Commonwealth Government to the States for road construction, although not in recent years. At 30th June, 1949 the aggregate amount was £249,686.

2. New South Wales.—(i) *General.* A central road authority was created by legislation early in 1925 for the purpose of providing improved and uniform standards of construction and maintenance of the principal roads, and to administer Governmental subsidies for work on those roads. This authority (now organized as the Department of Main Roads) exercises control over Governmental activities in connexion with road works, these activities embracing works on main and developmental roads throughout the State, all roads in the unincorporated portion of the Western Division, and proclaimed national works, principally bridges and ferries, constructed from Government funds. The department co-operates with the municipal and shire councils in the work of constructing and maintaining a well-organized system of main highways. Public roads, except those within the City of Sydney, may be proclaimed as main roads upon the recommendation of the Commissioner. The most important classes are :—

State Highways—the principal avenues of communication between the coast and the interior or throughout the State, connecting with such avenues in other States ; *Trunk Roads*—forming with the State highways the framework of the general system of intercommunication throughout the State ; *Ordinary Main Roads*—used principally by through traffic as the means of intercommunication between towns or important centres of population and, with the State highways and trunk roads, forming part of the general system of road communication throughout the State.

In addition, there are :—

Secondary Roads—in the metropolitan area of Sydney, carrying a substantial amount of through traffic and relieving neighbouring main roads of traffic which they would otherwise have to bear ; *Developmental Roads*—serving to develop a district or area of land by improving or providing access to a railway station or a shipping wharf, or to a road leading to a railway station or a shipping wharf.

In the metropolitan district the whole cost of the construction and maintenance of main roads is paid from the funds of the Main Roads Department, while in the country districts assistance in respect of road works may be granted for any area through which a main road passes. The cost of constructing developmental roads and works is borne in full by the Main Roads Department, but local councils are required to maintain them in satisfactory condition. For other roads the cost of both construction and maintenance work is generally chargeable to the revenue of local authorities, although Governmental assistance is not infrequently granted for works of construction and re-construction. In the Western Division the full cost of all roads and bridges is met by the Department of Main Roads.

The length of main and secondary roads maintained by the Department of Main Roads at 30th June, 1948 (excluding the Western Division) was 2,725 miles (16 per cent.), while the length maintained by Councils was 14,625 miles (84 per cent.). The proportions of the several classes of main roads maintained by Department and Councils respectively were :—State highways, 37 per cent., 63 per cent. ; trunk roads, 2 per cent., 98 per cent. ; ordinary main roads, 8 per cent., 92 per cent. ; secondary roads, 75 per cent., 25 per cent. In the County of Cumberland the Department maintained 77 per cent. of the roads (682 miles).

(ii) *Length of Roads.* (a) *Proclaimed Roads.* The following table shows lengths of proclaimed roads at 30th June, 1948, according to class of road :—

PROCLAIMED ROADS, NEW SOUTH WALES : LENGTHS, 30th JUNE, 1948.
(Miles.)

Division.	Main Roads.				Secondary Roads.	Developmental Roads.	Total.
	State Highways.	Trunk Roads.	Ordinary Main Roads.	Total.

Western	1,329	1,353	2,889	5,571	(b) 5,571
Total	6,490	3,741	12,635	22,866	56	2,801	25,723

(a) Metropolitan area.
Department.

(b) Excludes 2,309 miles of unclassified roads, the responsibility of the

During 1947-48 the following roads were proclaimed or declared :—83 miles of new main roads and extensions of existing main roads, 8 miles of new secondary roads, and 41 miles of new developmental roads.

(b) *Composition of Roads.* In 1946 the total length of all roads in New South Wales was estimated at 124,443 miles, including 7,820 miles in the Western Division. The lengths of roads, according to their composition or nature, were as follows :—cement concrete, 377 miles; asphaltic concrete, 212 miles; tar or bituminous macadam, 3,791 miles; surfaced water-bound macadam, 3,758 miles; water-bound macadam, 2,701 miles; gravel or crushed rock, 30,316 miles; formed only, 26,114 miles; cleared or natural surface only, 57,174 miles.

(iii) *Main Roads Department.* (a) *General.* The Main Roads Department plan for the main road development of the metropolis, and the County of Cumberland generally, has been adapted to, and mainly incorporated in, the Cumberland County Council planning scheme for the development and improvement of the County of Cumberland. Surveys and designs have been advanced, and the acquisition of land is proceeding, in connexion with the planned Newcastle and District Arterial Road System and Wollongong-Port Kembla District Main Roads System.

In addition to its construction and maintenance work on roads, the Main Roads Department is engaged on a scheme for widening metropolitan roads. This class of work had already been commenced by several councils prior to the inception of the Department. At 30th June, 1948 the total lengths of roads widened and reconstructed to widths, in the main, between 80 and 84 feet amounted to about 26 miles.

Important work on bridges during 1947-48 included the replacement of a timber deck by one of reinforced concrete over a length of 1,208 feet on the Pyrmont Bridge, Darling Harbour, Sydney, work being carried out, for the most part, while traffic continued to flow; progress in the construction of a steel and concrete bridge over the Hunter River at Hexham (length 1,253 feet); construction work on piers and abutments in a steel truss bridge with concrete piers and abutments and reinforced concrete deck at Iron Cove, between Balmain and Drummoyne, Sydney (length 1,536 feet); commencement of work on a steel and reinforced concrete bridge, with lifting span, over the Clyde River at Bateman's Bay (length 1,008 feet).

(b) *Receipts and Payments.* The funds of the Department of Main Roads are derived principally from taxation of motor vehicles, contributions by the Commonwealth Government under the Commonwealth and Federal Aid Roads and Works Acts (see Chapter XVII.—Public Finance, for some particulars of the basis and distribution of grants under these Acts and par. 1 of this section, page 665, for particulars of the amounts paid in recent years), contributions by municipal and shire councils, and special (not statutory) assistance by the State Government by way of loan moneys or special grants from revenue funds. Receipts and payments for the four years 1944-45 to 1947-48 compared with the income and expenditure for 1938-39 are shown below.

Commencing with the year 1941-42 a change was made to a receipts and payments system of accounting:—

(a) Income and expenditure.

(b) Includes £398,830 not drawn by State during 1943-44 and 1944-45.

(c) Includes £696,096 to liquidate certain outstanding liabilities before due dates.

The figures shown above represent the aggregate receipts and payments of three funds—the County of Cumberland Main Roads Fund, the Country Main Roads Fund and the Developmental Roads Fund. From 1st January, 1925 to 30th June, 1948 receipts amounted to £80,869,204 and payments to £84,412,148. Particulars of the individual funds are—County of Cumberland, receipts £24,151,280, payments £22,878,875; Country, £59,233,646, £58,220,597; Developmental, £3,484,278, £3,312,676.

The total expenditure on roads streets and bridges in the State by all authorities during the years 1938-39 and 1944-45 to 1947-48 was, respectively, £8,894,000, £4,606,000 £5,252,000, £7,201,000 and £8,934,000. These figures are approximate and they include expenditure on construction, maintenance and direct administration, but not on debt charges. Expenditure on the Sydney Harbour Bridge is not included.

(c) *Sydney Harbour Bridge.* The Sydney Harbour Bridge was opened for traffic on 19th March, 1932. The main span is 1,650 feet and the clearance for shipping 170 feet from high water level. The deck, 160 feet wide, carries a roadway, two railway tracks and two tramway tracks, and there is also a footway on each side. The capital cost of the bridge to the 30th June, 1948 was £9,746,388, but this amount will be reduced by approximately £138,000 upon the disposal of all surplus resumed property. The portion met from repayable loan funds, over £8,000,000, is to be repaid over a period of 53 years, ending approximately in 1985. The accumulated balance of the Bridge Account to 30th June, 1948 showed a deficiency of £409,843. The following table shows income and expenditure for the years 1938-39 and 1944-45 to 1947-48 :—

SYDNEY HARBOUR BRIDGE, NEW SOUTH WALES : INCOME AND EXPENDITURE.

Total	424,294	419,876	421,207	437,787	433,832

During 1947-48, 23,548,000 rail travellers, 23,834,000 tram and omnibus travellers, and 15,218,000 road travellers in 8,741,000 road vehicles crossed the bridge, contributing, respectively, 26 per cent., 5 per cent., and 69 per cent. of the total toll revenue.

3. *Victoria.*—(i) *General.* With the object of improving the main roads of the State the Country Roads Board was established by legislation passed in 1912. The principal duties of the board are to determine the main roads, State highways, tourists' roads, etc., to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance, and to recommend deviations in existing roads or the construction of new roads in order to facilitate communication or to improve the conditions of traffic.

(ii) *Length of Roads.* (a) *Declared Roads.* The total length of declared roads in Victoria at 30th June, 1948 was 14,295 miles (an increase of 1,180 miles over the previous year's total), classified as follows:—State highways, 3,646 miles; main roads, 9,006 miles; tourists' roads, 402 miles; forest roads, 241 miles. The total length of the surface treated (black) system included in the foregoing totals was 6,055 miles or 42.3 per cent.

(b) *Composition of Roads.* It is estimated that, in addition to the 14,295 miles of classified roads as above, there were about 50,000 miles of more important unclassified roads. The latest detailed estimate of the length of roads and streets in Victoria (as at 30th September, 1948) provides the following information:—Wood or stone, 62 miles; portland cement concrete, 150 miles; asphaltic concrete and sheet asphalt, 202 miles; tar or bitumen surface seal, 10,241 miles; water-bound macadam, gravel, sand and hard loam pavements, 28,418 miles; formed only, 23,901 miles; surveyed only, 38,437 miles; total 101,411 miles.

(iii) *Country Roads Board.* (a) *General.* During 1946-47 and 1947-48, respectively, 660 miles and 927 miles of work were carried out on roads under the Board's control. In addition, 43 miles (each year) were treated for municipalities, and 25 miles of bituminous surfacing were laid for the Commonwealth in 1946-47. The total mileages of work carried out were 728 miles in 1946-47 and 970 in 1947-48. Of the work on the roads under the Board's control, 200 miles related to State highways in 1946-47 and 259 miles in 1947-48.

Major bridge work carried out during 1947-48 included the construction and driving of concrete piles for the Swan-street Bridge, Melbourne, over the River Yarra. The proposed bridge will cross the river at a 45° angle. It will be a reinforced concrete "T" beam type structure of five main spans, the three centre spans being 90 feet each in length and the two end spans 69 feet each, a total of 408 feet between abutments. The roadway will be 40 feet in width together with two footways each 8 feet wide. The Country Roads Board is the constructing authority.

(b) *Receipts and Payments.* Funds created under the Act were the Country Roads Board Fund, the Loan Account and the Developmental Roads Loan Account. Particulars of the operations of these funds, together with those of the Commonwealth and Federal Aid Roads and Works Account, are given hereunder:—

Country Roads Board Fund. All fees (other than fees for licences to drive motor cars) and fines under the Motor Car Act, and all registration fees and fines for traction engines, less cost of collection of such fees and fines, are credited to this fund. Particulars of receipts and payments connected with the Commonwealth and Federal Aid Roads and Works Acts, Commonwealth Defence Works and several other funds are not included therein (see next page for particulars). Receipts and payments for the years 1938-39 and 1944-45 to 1947-48 were as follows:—

Country Roads Board Loan Account Loans have been authorized from time to time under the Country Roads Acts for permanent works on main roads and State highways. During the years ended 30th June, 1947 and 1948, respectively, receipts amounted to £10,007 and £15,120, and payments to £9,979 and £15,178. The total expenditure to 30th June, 1948 was £5,072,283.

Developmental Roads Loan Account. This fund was created for the purpose of constructing and maintaining subsidiary or developmental roads. Loan moneys raised were exhausted at 30th June, 1937, the total expenditure at that date being £6,425,758.

Commonwealth and Federal Aid Roads and Works Account. Revenue and expenditure in respect of the Commonwealth and Federal Aid Roads and Works Account, particulars of which are not included above, were as follows:—

(£.)

Item.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.

(a) Includes amounts contributed by the Commonwealth Government under the provisions of the Commonwealth and Federal Aid Roads and Works Acts.

4. *Queensland.*—(i) *General.* Under the Main Roads Act 1920 a Main Roads Board was constituted, consisting of three members appointed by the Governor-in-Council. In 1925 the Board was abolished and its powers conferred upon a single Commissioner. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main, developmental, secondary, mining access, farmers' and tourist roads and tourist tracks, and the responsibility for building and maintaining these declared roads is largely that of the Commission. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is subsidized by the State Government by means of Treasury loans. Other roads are built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

(ii) *Length of Roads.* (a) *Declared Roads.* The total length of declared roads in Queensland at 30th June, 1948 was 19,737 miles, comprising State highways, 7,262 miles; main roads, 10,605 miles; developmental roads, 245 miles; secondary roads, 538 miles; mining access roads, 673 miles; farmers' roads, 156 miles; tourist roads, 256 miles; tourist tracks, 2 miles. During 1947-48, 659 miles were added to the list. The length of roads improved in Queensland from the date of commencement of work under the Main Roads Acts 1920-1943 to 30th June, 1948 was 8,892 miles (45 per cent.). At that date, also, 551 miles of new road construction and 306 miles of stage construction work were proceeding.

(b) *Composition of Roads.* The total length of roads and streets in Queensland at 30th June, 1948 was :—Concrete, 86 miles; bitumen, 3,876 miles; macadam, 8,157 miles; other formed, 44,602 miles; unconstructed, 78,803 miles; total, 135,524 miles.

(iii) *Main Roads Commission.* (a) *General.* During 1947-48 (1946-47 in parenthesis) the Commission completed 570 miles (474 miles) of roads including new construction and stage construction. Bridges of all types to a length of 2,909 (3,706) lineal feet were constructed during 1947-48 (1946-47), bringing the total constructed by the Commission at 30th June, 1948 to 144,422 feet, approximately 27 miles. In addition, at 30th June, 1948, 5,177 feet were under construction. These figures exclude particulars of the Fitzroy River and Burdekin River bridges—special projects.

The first of these is a joint operation being carried out by the Main Roads Commission and the Rockhampton City Council. The design provides for a bridge 1,210 feet long, comprising seven spans varying in length from 143 feet to 198 feet. There will be 42 feet between kerbs for vehicles, with two 5-foot clear footways. The total estimated cost of this structure, including approaches, is approximately £426,000, one-half being financed under the terms of the Main Roads Act. The bulk of the work completed to 30th June, 1948 has been on pier foundations and approaches. The second of these, over the Burdekin River, will be a combined road and rail bridge, estimated to cost about £1,900,000. This work, the largest single post-war project actually under construction in Queensland, had been advanced to a stage at 30th June, 1948, where two of the nine caissons designed for the river bed had been sunk to foundation level. The overall length of the bridge including approaches will be 3,620 feet, and there will be ten spans across the river.

(b) *Receipts and Payments.* The funds of the Main Roads Commission are obtained chiefly from motor vehicle registration and collections, fees, etc., under the Transport Acts, contributions under the Commonwealth and Federal Aid Roads and Works Acts, and loans, grants and advances from the State Government. The total receipts and payments, including amounts for defence works, during each of the years 1938-39 and 1944-45 to 1947-48 are shown below:—

5. **South Australia.**—(i) *General.* The Highways Act 1926-1944 created a Commissioner of Highways and provided for a Highways Fund. The Commissioner is virtually empowered to determine upon which main roads he will spend the moneys available; in doing which he has to take into account the availability of funds for main roads, the service the road is intended to render, and the present or future adequacy of railway facilities in the area through which it passes.

The Highways Fund is credited with the receipts from State motor taxation, fees, fines and licences, after deduction of the costs of collection, and all loans raised and appropriated for roads. All moneys received by the State from the Commonwealth under the Commonwealth and Federal Aid Roads and Works Acts are also expended by the Commissioner of Highways under the general provisions of the Highways Act.

(ii) *Length of Roads.* The total length of roads in use for general traffic at 30th June, 1948, was as follows:—Within District Council and Corporation Boundaries.—Blocks (wood or stone), 8 miles; bituminous concrete (asphalt and premix), 393 miles; cement concrete and cement penetration, 2 miles; penetration or surface dressed (bitumen or tar), 4,283 miles; metalled (gravelled or rubbled), 13,429 miles; formed, but little or no metal, 8,742 miles; surveyed, used by traffic, but little or no improvement, 25,220 miles; total, 52,077 miles: Outside Districts (main roads only), 565 miles: Grand total, 52,642 miles. Lengths of main roads within district council and corporation boundaries aggregated 7,556 miles.

(iii) *State Highways and Local Government Department.* (a) *General.* A programme of road works proposed to be carried out during the period of five years after the cessation of hostilities provides for the reconstruction of approximately 2,850 miles of main roads throughout the State at an estimated cost of more than £3,000,000, the greater proportion to be provided from motor vehicle taxation. The programme includes (i) the realignment and widening of roads constructed in the early stages of the first five-year plan (prepared in 1936, but suspended because of the war), now below the accepted standard necessary for modern traffic, (ii) the construction or reconstruction of existing unimproved main roads, and (iii) the construction of roads to assist development in the newer settled areas, with particular reference to the south-eastern part of the State. The continuing shortages of man-power and materials, and difficulties in securing road-making plant and machinery, however, have prevented the progress from being as much as was expected.

(b) *Receipts and Payments.* The following table shows particulars of receipts and payments, during the years 1938-39 and 1944-45 to 1947-48, of funds controlled by the Highways and Local Government Department. Wholly comparable figures for 1938-39 are not available.

(a) Figures for 1938-39 are not completely comparable with those for following years. (b) Roads, plant, etc. (c) Interest and sinking fund payments. (d) Not available separately.

The total expenditure, both revenue and loan, by State and local governments on roads, streets and bridges in South Australia during the years 1938-39 and 1944-45 to 1947-48 was, respectively, £1,966,000, £1,198,000, £1,461,000, £1,930,000 and £2,411,000.

6. Western Australia.—(i) *General.* Under the Main Roads Act 1930-1939 the Main Roads Board previously existing was abolished and a Commissioner of Main Roads was appointed. His duties include :—The recommending of the declaration that any road shall be, or shall cease to be, a main road, taking into account the availability of funds for main roads and the service the road is intended to render; the construction and maintenance of main roads; the carrying out of surveys, investigations and experiments connected with—the determination of main roads, the resources of the State in materials suitable for road construction and maintenance and their utilization, suitability, etc., and methods of road construction and maintenance, etc. Provision also exists for the declaration and provision of developmental roads. The Act authorizes two trust accounts (Main Roads Trust Account and Main Roads Contribution Trust Account) to record the moneys prescribed as available to the Commissioner for expenditure associated with roads, etc. In addition, the Commissioner operates on those Trust Accounts which are used for funds made available under the Commonwealth and Federal Aid Roads and Works Acts.

(ii) *Length of Roads and Streets.* The total known length of streets and roads in existence in the various municipalities at 31st October, 1948, and in road districts at 30th June, 1948, was as follows :—Concrete, 4 miles; bituminous, 3,208 miles; granite, limestone, etc., waterbound, 305 miles; gravel waterbound, 10,069 miles; other constructed surfaces, 244 miles; formed only, 28,211 miles; unprepared, 32,940 miles (incomplete); total, 74,981 miles.

The lengths of declared roads at 30th June, 1948, were :—Main roads, 3,154 miles; developmental roads, 12,115 miles; other classified roads, 24 miles; total, 15,293 miles. No new main roads were declared during the years 1946-47 and 1947-48.

(iii) *Main Roads Department.* During the year 1947-48 (1946-47 in parenthesis) the activities of the Department included :—clearing, 926 miles (261 miles); forming, 854 miles (466 miles); gravelling, 729 miles (309 miles); metalling, 3 miles (nil); reconditioning, 1,920 miles (2,285 miles); sanding, 28 miles (25 miles); side drains, 66 miles (62 miles). In addition, lengths of tar and bitumen work performed aggregated 350 miles (233 miles). Bridges constructed numbered 23 (14). In October, 1947 work was commenced on the new causeway over the Swan River. This project involves the construction of two bridges, one 737 feet long and one 382 feet long, with approach roads, and connecting road and embankments. At the end of June, 1948 work had progressed to the stage that four coffer dams were completed and two were under construction on the longer bridge. A start has been made on the widening of the principal highways converging on Perth (the necessity for which was recognized some years ago) by work during 1947-48 on sections of the Perth-Armadale Road and the Great Eastern Highway.

(iv) *Receipts and Payments—Combined Road Funds.* The following table shows the combined transactions of the Main Roads Trust Account, the Main Roads Contributions Trust Account, the Metropolitan Traffic Trust Account, the Transport Co-ordination Trust Account (up to the end of 1946-47) and the Commonwealth and Federal Aid Roads and Works Trust Accounts during the years ended 30th June, 1939 and 1945 to 1948.

Co-ordination Trust Account.

(b) Excludes Transport

7. *Tasmania.*—(i) *General.* Under the Transport Act 1938, which came into operation on 1st July, 1939, the Transport Commission was constituted to co-ordinate, regulate, control, and improve the means of, and facilities for, transport by road, rail or air within the State. Revenues at its disposal for road and motor traffic purposes are the Commonwealth and Federal Aid Roads and Works Grants, motor vehicle registration fees and tax, and licensing fees for drivers and public motor vehicles. Under the Roads and Jetties Act 1944, which provides for the classification of the whole of the roads of the State so that they will be adequately and efficiently maintained, the cost of maintenance of roads classified as State highways, tourist roads and developmental roads is borne by the Transport Commission. It is also responsible for a proportion of the cost of maintenance of main and secondary roads. Municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads, except in special cases. The cost of construction of roads and bridges in Tasmania is borne almost entirely by the State Government. The expenditure of the Public Works Department (the construction and maintenance authority for the Transport Commission) during 1947–48 on roads, tracks and bridges amounted to £693,198, of which £609,981 was charged to road funds, £17,073 to revenue, £65,274 to loan and £870 to Crown lands funds.

(ii) *Length of Roads.* (a) *Classified Roads.* The mileages of classified roads in Tasmania at 30th June, 1948 were as follows:—State highways, 1,199 miles; main roads, 662 miles; secondary roads, 186 miles; tourist roads, 50 miles; developmental roads, 12 miles; total 2,109 miles. Country roads totalled 10,276 miles. The mileage of sealed roads were:—State highways, 537 miles (45 per cent.); main roads, 137 miles (21 per cent.); secondary roads, 6 miles (3 per cent.); total, 680 miles (32 per cent. of all classified roads, and 6 per cent. of all roads, in Tasmania).

(b) *Composition of Roads.* The length of all roads in Tasmania, including those with surfaces of lower grade, at 30th June, 1942 (the latest date for which this information is available) was as follows:—Sheet asphalt on concrete base, 1 mile; other bituminous, 788 miles; concrete, 6 miles; granite, limestone, etc., waterbound, 4,797 miles; surfaces of lower grade, 6,794 miles; total, 12,386 miles.

(iii) *Transport Commission.* The principal improvement and reconstruction works carried out during 1947–48 included the construction of the Northern Outlet Road, the widening of the Huon Road, the West Tamar Highway deviation, and the construction of the Zeehan-Renison Bell Road, the expenditure for these projects amounting to almost £80,000. The resealing programme carried out during the same year was the largest ever attempted by the Public Works Department. A total of 195 miles was sealed, 43 miles more than for the previous year. The sealing carried out included 68 miles of normal resealing and 127 miles of war-time lag.

(iv) *Receipts and Payments—Combined Road Funds.* The table hereunder shows particulars of the receipts and payments of the combined Road Fund and Commonwealth and Federal Aid Roads and Works Funds under the control of the Transport Commission for the years 1939-40 and 1944-45 to 1947-48 :—

(v) *Hobart Bridge.* Under the Hobart Bridge (Acquisition and Administration) Act 1944 the Transport Commission is responsible for the administration, control and management of the Hobart Bridge and transport services. Receipts from bridge tolls for the year ended 30th June, 1948 amounted to £32,291 compared with £33,002 during 1946-47. Expenditure was £9,993 compared with £8,258, and capital expenditure amounted to £19,827 and £20,149, 1947-48 and 1946-47 respectively. Net profit was £2,471 and £4,595. Capital cost to 30th June, 1948 amounted to £303,916.

8. *Summary of Roads used for General Traffic.*—(i) *Proclaimed or Declared Roads.* The table hereunder is a summary of the roads proclaimed or declared under the Acts of the several States relative to the operations of the central road authorities, and shows the lengths of various classes proclaimed or declared as at 30th June, 1948. These proclaimed or declared roads are those for which the central road authority assumes responsibility under the Act for the whole, or a proportion, of the cost of construction and/or maintenance, the extent varying from State to State and with the class and locality of the roads. Before proclamation of a main road, the following points are, in general, amongst the more important of those to be considered :—(a) the funds available or likely

to be available for main roads; (b) whether the road is, or will be, the main trunk route connecting any large producing district with its market or point of shipment; (c) whether the road is, or will be, the main trunk route of intercommunication between two or more such districts or between two or more large centres of population; (d) whether the road is, or will be, the main trunk route between the capital of the State and any large producing district or any large centre of population; (e) whether the road is, or will be, the main trunk route between the capitals of two or more States; (f) whether the district concerned is, or will be, sufficiently served by railways. Provision is also made in some States for the declaration of roads other than main. The absence of a particular class from the following data for any State does not necessarily imply that there are no roads within that State that might be so classified; the classes are restricted only to roads proclaimed or declared under the Acts. A further point to make is that, through various causes, e.g. insufficiency of funds, manpower or materials, etc.—construction or maintenance may not keep pace with gazettals of mileages, and that therefore the condition of a road may not match its status.

PROCLAIMED OR DECLARED ROADS: LENGTHS, 30th JUNE, 1948.

(b) Includes mining access roads, 673 miles; farmers' roads, 156 miles;

(ii) *Composition of Roads.* The following table represents an attempt to classify all the roads used for general traffic in Australia, at the latest date available, according to States and to certain broad composition groups. The results are not entirely satisfactory, (i) because the whole of Australia is not covered, (ii) because the dates of reference differ, and (iii) because the figures constituting each group are not wholly comparable, State by State. It is hoped, however, despite these defects, that the table will provide an approximate and general idea of the main types of roads in Australia.

The data in the table are compiled from publications of the State Government Statisticians, and are derived mainly from local government sources. They therefore exclude the Territories of the Commonwealth and probably unincorporated areas in some States. Furthermore, the figures on the returns supplied by the local government authorities are in some cases of doubtful accuracy. Details of the composition of roads, as far as they are available, vary to such an extent between States that it was considered preferable to show here only major divisions, rather than to attempt greater dissection, which would have resulted either in a lengthy total column incomplete for most of its items, or, by the expedient of "forcing", in some mixed classes of little value. Even the broad classes shown suffer somewhat from this latter defect, but not to an extent sufficient to mar the table as a whole.

Groups 1-4 as shown in the table include, respectively, the following types of composition :—

1. *Wood or Stone.* Wood blocks ; stone paved.
2. *Concrete.* Cement concrete ; asphaltic concrete ; bituminous concrete ; sheet asphalt on concrete base.
3. *Bituminous.* Tar or bituminous macadam ; tar and bituminous surface seal ; surfaced water-bound macadam or gravel ; bituminous or cement penetration.
4. *Macadam and Other.* Water-bound macadam ; granite, limestone, and blast-furnace slag, water-bound ; gravel water-bound ; gravel or crushed rock ; metalled (gravel or rubble) ; gravel, sand and hard loam pavements.

Groups 5 and 6 include roads so-called mainly because they are used for general traffic, irrespective of their surfaces, prepared or otherwise.

It will be noticed that some of the terms used above are practically synonymous. Such terms are, of course, not used by any one State, but are the classifications adopted by different States.

For details of any particular State, see the respective paragraphs in the preceding pages.

ALL ROADS USED FOR GENERAL TRAFFIC : LENGTHS. (Miles.)

Composition of Road.	N.S.W. 1946.	Victoria. 30th Sept., 1948.	Q'land. 30th June, 1948.	S. Aust. 30th June, 1948.	W. Aust. 1948. (a)	Tasmania. 30th June, 1942.	Total.
1. Wood or stone	62	..	8	70
2. Concrete ..	589	352	86	395	4	7	1,433
3. Bituminous ..	7,549	10,241	3,876	4,283	3,208	788	29,945
4. Macadam and other ..	33,017	28,418	8,157	13,429	10,618	4,797	98,436

(a) Municipalities, 31st October and Road Districts, 30th June.

(b) Estimated dissection.

NOTE.—In addition to the foregoing, there are 453 miles of roads in the Australian Capital Territory and 6,793 miles of roads and tracks in the Northern Territory. The bulk of the former fall within groups 3 and 4, and of the latter within groups 5 and 6. Including these, the total length of roads, etc. for Australia amounts to 511,638 miles.

It will be seen from the foregoing table that a little more than one-quarter of the road lengths of Australia has actually been constructed, the remainder, for the greater part, being in little more than the natural state. The percentages for each group are as follows :—Group 1, 0.01 ; Group 2, 0.29 ; Group 3, 5.97 ; Group 4, 19.63 ; Group 5, 26.84 ; Group 6, 47.26. The percentage of constructed lengths to total length in each State is as follows :—New South Wales, 33 ; Victoria, 39 ; Queensland, 8 ; South Australia, 34 ; Western Australia, 18 ; Tasmania, 45. Comparisons between the States should be made with caution, however, because, in addition to the defects enumerated at the beginning of this section, factors such as the area, physiography, density and distribution of population, nature of economic activity, other facilities for transport, etc., in each State must be taken into account.

9. *Summary of Expenditure on Roads and Bridges.*—(i) *General.* Figures showing the total expenditure on roads and bridges in all States are not available. Such totals are very difficult to obtain, not only because of the number of States, but also because of the number of authorities concerned. In most States there are three classes of authorities—the State Government, the central road authority, and the numerous local government bodies. Both State Government and local government bodies operate

through revenue and loan funds, and payments may be made by the State Government direct from either fund, or through the funds of other authorities. The expenditure of the central road authority may also be direct or indirect. Consequently the problem of duplication caused by inter-fund payments arises. On the other hand, some expenditure may be omitted because separate particulars are not available, or they may be overlooked by the compiler. Ignorance of the precise nature of items may cause either incorrect inclusion or omission. To produce accurate figures would entail more research than at present can be undertaken.

The two paragraphs following therefore represent only: (i) aggregate expenditure from the various State road funds referred to in the foregoing pages, and (ii) loan fund expenditure by State Governments. No direct expenditure by local government bodies is included. Sub-section 2. Finances, of § 2. Local Government Authorities, contains some particulars of local government revenue and expenditure in connexion with roads, streets and bridges (*see* pages 658 and 661).

(ii) *Aggregate Expenditure from State Road Funds.* The following table shows the expenditure on the construction and maintenance of roads, including payments to local government bodies, by each State during the years 1938-39 and 1944-45 to 1947-48, as summarized from the foregoing sections. Expenditure on administration, debt charges, Commonwealth defence works, payments to State consolidated revenues, and on plant and materials is not included. In some instances expenditure on works other than roads and bridges is included. Figures are not completely comparable as between States, and, in some States, as from year to year.

ROADS AND BRIDGES : AGGREGATE EXPENDITURE FROM ROAD FUNDS.

(£'000.)

Year ended 30th June—	N.S.W. (a)	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
1939 ..	3,257	2,099	2,405	692	1,067	(b) 272	9,792
1945 ..	2,954	977	1,275	507	382	250	5,445
1946 ..	2,373	1,071	1,341	605	433	331	6,154
1947 ..	3,305	1,976	2,613	851	791	566	10,102
1948 ..	3,886	3,113	3,039	1,314	1,212	675	13,239

(a) Excludes Sydney Harbour Bridge.

(b) Year 1939-40.

The foregoing particulars do not represent the total expenditure on roads and bridges in each State. To obtain such information additions must be made on account of (i) State Government expenditure from revenue and loan, and (ii) local government expenditure from revenue and loan, while, on the other hand, allowances must be made for inter-fund payments. (*See* par. (i) above.)

(iii) *State Net Loan Expenditure.* In recent years, expenditure from State loan funds on roads and bridges has not been large, and it would appear, also, that a considerable proportion passes through the funds of the central road authorities and is therefore included in the figures on their financial operations in the foregoing sections, while, on the other hand, it must be supplemented by expenditure from State revenue. Gross loan expenditure by all State Governments during each of the years 1946-47 and 1947-48 amounted to a little over £1,000,000, and net expenditure to considerably less. Aggregate net loan expenditure on roads and bridges in each State to 30th June, 1948 amounted to the following approximate sums:—New South Wales, £21,000,000; Victoria, £13,000,000; Queensland, £8,000,000; South Australia, £4,000,000; Western Australia, £3,000,000; Tasmania, £6,000,000; total, £55,000,000.

§ 5. Water Supply, Sewerage and Drainage.

NOTE.—See also Chapter XXV.—Water Conservation and Irrigation.

1. **New South Wales.**—(i) *General.* The largest two domestic water supply and sewerage systems are controlled by statutory boards each consisting of a president and a vice-president appointed by the State Government and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e., in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, and (b) the Hunter District Water Board, serving the Newcastle area. At Broken Hill a similar board includes a representative of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal and shire councils.

(ii) *Water Supply—to 30th June, 1948. (a) Metropolitan.* The storage reservoirs of the metropolitan system, with a combined available capacity of 125,144 million gallons, drain catchment areas of 376 square miles (Upper Nepean, 347 square miles and Woronora, 29 square miles). Water is drawn also from the Warragamba River, with a catchment of 3,383 square miles. This system is being developed, and proposals exist for a dam to be built to a height of 348 feet above bed level, giving a safe draught of 260 million gallons per day. The existing temporary storage is supplied by a weir 50 feet high with a maximum daily off-take of 40 million gallons. At 30th June, 1948 there were 92 service reservoirs in use with a combined capacity of 537.1 million gallons. Rating for water for 1947-48 was 9½d. in the £1 of assessed annual value and the charge for water measured by meter 1s. 2d. per 1,000 gallons.

(b) *Newcastle.* The water supply is drawn from two sources (1) the Chichester Reservoir, with a storage capacity of about 5,000 million gallons and draining a catchment of 76 square miles, and (2) the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens. Service reservoirs and tanks distributed throughout the Water Supply District have a total storage capacity of 106 million gallons. Water rating for 1947-48 was 1s. in the £1 on assessed annual value (approval was given to the provision for an increase of 3d. in the £1 as from 1st July, 1948). The price of water to domestic and industrial consumers is 1s. 3d. per 1,000 gallons.

(c) *Water Supplied, etc.* The following tables show, for the Sydney and Newcastle systems, the number of properties, the estimated population supplied, and other details for the years 1946-47 and 1947-48:—

WATER SUPPLY, SYDNEY (a) : SERVICES.

Year.	Improved Properties for which Water Main available.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for the Year.	Average Daily Consumption.		Length of Mains.	Number of Meters.
					Per Property.	Per Head of Estimated Population.		
	No.		Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.	
1946-47 ..	387,980	1,718,000	131.2	47,874	338	77.1	4,743	160,169
1947-48 ..	400,615	1,774,300	122.1	44,682	305	69.6	4,817	170,124

(a) Includes part of South Coast.

WATER SUPPLY, NEWCASTLE : SERVICES.

Year.	Pro- perties Supplied.	Esti- mated Popu- lation Supplied	Average Daily Supply.	Total Supply for Year.	Average Daily Supply.		Length of Mains.
					Per Pro- perty.	Per Head of Esti- mated Popu- lation.	
	No.		Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.
1946-47	56,804	223,656	18.9	6,900	333	83.9	1,134
1947-48	58,660	231,600	18.5	6,774	316	79.3	1,169

(iii) *Sewerage and Drainage*—to 30th June, 1948. (a) *Metropolitan*. The Sydney sewerage system consists mainly of outfall systems discharging into the Pacific Ocean. At 30th June, 1948 there were six outfalls and six treatment works.

Stormwater drainage channels under the Metropolitan Water, Sewerage and Drainage Board's control at the same date were 129 miles long. Sewerage rating for 1947-48 was 9½d. in the £1 of assessed annual value and drainage from ½d. to 3d.

(b) *Newcastle*. The main sewerage system of the Newcastle area discharges into the Pacific Ocean at Merewether Gulf. In some of the outlying districts treatment works have been installed.

Sewerage rates for 1947-48 were 1s. 3d. in the £1 of assessed annual value and drainage rates (on certain areas served) 3d. in the £1. Approval has been given for the reduction of 1d. in the £1 on stormwater drainage rates.

(c) *Particulars of Services*. The following table supplies, for the Sydney system, details of sewerage services and stormwater drains as at 30th June, 1947 and 1948.

SEWERAGE AND DRAINAGE, SYDNEY(a) : SERVICES.

At 30th June—				Improved Properties for which Sewer Available.	Estimated Population Served.	Total Sewage Pumped for the Year.	Length of Sewers.	Length of Storm- water Channels.
				No.		Mill. gals.	Miles.	Miles.
1947	287,098	1,197,755	9,604	2,805	117
1948	291,069	1,263,439	9,894	2,829	129

(a) Includes part of South Coast.

At 30th June, 1948 (at 30th June, 1947 in parenthesis) 41,261 (39,886) premises had been connected to the Hunter District Water Board's sewerage system (Newcastle area). The total length of sewers under the Board's control was 596 (586) miles, and the length of drains over 24 inches diameter was 38 (38) miles.

(iv) *Finances, Sydney and Newcastle Systems*. The following statement shows the debt, revenue and expenditure on account of the services of water supply, sewerage and drainage by the Metropolitan Water, Sewerage and Drainage Board and the Hunter District Water Board during 1946-47 and 1947-48.

WATER SUPPLY, SEWERAGE AND DRAINAGE, SYDNEY(a) AND NEWCASTLE : FINANCES.

(a) Includes part of South Coast. (b) Includes provision for renewals, long service leave, loss on exchange, etc. (c) Excludes non-interest bearing capital in respect of stormwater drains transferred from Public Works Department—£1,254,320 at 30th June, 1948.

(v) *Country Water Supply and Sewerage Systems.* At 31st December, 1946 country water supply services were conducted or under construction by 73 municipalities, 42 shires and 5 county councils, and country sewerage services by 51 municipalities, 10 shires and one county council. The capital indebtedness of these schemes was £7,009,677 at 31st December, 1946, namely, £4,394,088 for water and £2,615,589 for sewerage. Of the foregoing amounts, Government advances amounted to £583,129. Debt of the municipalities amounted to £4,790,697, shires to £829,273 and county councils to £1,389,707. Aggregate income and expenditure, respectively, amounted to £1,000,152 and £852,687 during 1946, and to £944,657 and £823,325 in 1945.

(vi) *Other Water Supply and Sewerage Systems.* The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31st December, 1948 was £624,955. Income and expenditure, respectively, were £95,504 and £103,864 for 1948 and £81,222 and £92,651 for 1947.

The following country water supply systems—South-West Tablelands, Junee and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Railways Department, and other large consumers; only a small quantity is sold directly to private consumers. The capital indebtedness of these systems was £2,282,034 at 31st December, 1948.

There are also the Mulwala Water Supply and Sewerage Service constructed as an urgent war-time work for the Commonwealth, and the Bethungra Water Supply System administered by the Department of Public Works in conjunction with the Junee supply.

2. **Victoria.**—(i) *Melbourne and Metropolitan Board of Works—to 30th June, 1948.*

(a) *General.* The metropolis, for water supply, sewerage and drainage and river improvement purposes, comprises all that land within a radius of 13 miles of the Post Office at the corner of Bourke and Elizabeth-streets, Melbourne, and the remaining portions of the Cities of Moorabbin, Mordialloc, and Nunawading and the shire of Mulgrave and certain portions of the remainder of the Shires of Eltham, Doncaster and Templestowe, and Dandenong, but excludes a portion of the Shire of Werribee within such radius. This territory has an area of 450 square miles and comprises 27 cities and one shire and parts of one other city and 9 other shires. The Board comprises 48 members, including the chairman, who is elected every four years by the other members. These members, or commissioners, are from time to time elected by the councils of the municipal districts wholly or partly within the metropolis. The principal functions of the Board are to control and manage the metropolitan water supply system; to provide the metropolis with an efficient system of main and general sewerage; to deal with main drains and main drainage works; and to control and manage the rivers, creeks and watercourses within the metropolis.

(b) *Water Supply.* There are five storage reservoirs serving the metropolitan area—Yan Yean, 7,234 million gallons (available for consumption, 6,605 million gallons); Toorourrong, 60 million gallons; Maroondah, 6,274 million gallons (4,855 million gallons); O'Shannassy, 930 million gallons; Silvan, 8,853 million gallons (8,823 million gallons); total 23,351 million gallons (21,273 million gallons). Service reservoirs number 25, with a total capacity of 262 million gallons. Preparatory work has been undertaken on the Upper Yarra Dam project, immediately upstream from the confluence of the Yarra and Doctor's Creek. The dam will impound 30,000 million gallons. The preliminary estimate of the cost, including all road deviations and improvements, rail facilities and electric power installation, is £3,800,000.

The following table shows particulars of Melbourne metropolitan water supply services for 1946-47 and 1947-48. The rate levied in 1947-48 was 6d. in the £1 on the net annual value of the property served. There is a charge of 1s. per 1,000 gallons of water supplied by meter.

WATER SUPPLY, MELBOURNE : SERVICES.

Year.	Number of Houses Supplied.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for the Year.	Average Daily Consumption.		Length of Aqueducts, etc., Mains and Reticulation.	Number of Meters.

(c) *Sewerage and Drainage.* Particulars of sewerage and drainage services for 1946-47 and 1947-48 are shown below. The rate levied in 1947-48 in respect of sewerage was 1s. in the £1 on the net annual value of the property served. The drainage rate was 1d. in the £1.

SEWERAGE AND DRAINAGE, MELBOURNE : SERVICES.

Year.	Number of Houses for which Sewers are Provided.	Estimated Population for which Sewers are Provided.	Average Daily Pumping.	Total Sewage Pumped for the Year.	Average Daily Pumping.		Length of Sewers, etc.	Length of Main Drains.
					Per House.	Per Head of Estimated Population.		
			Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.	Miles.
1946-47	294,343	1,168,542	59.1	21,570	200.8	50.6	2,773	117
1947-48	302,433	1,202,000	61.6	22,551	203.8	51.3	2,814	122

The metropolitan sewerage system consists of the Main system (serving an area of 65,884 acres) and three subsidiary systems—the Sunshine system (serving an area of 911 acres in the Shire of Braybrook, including the township of Sunshine), the Kew system (serving an area of 99 acres in Kew) and the South-eastern system (serving an area of 1,868 acres in Cheltenham, Parkdale, Mentone and Mordialloc). The Metropolitan Sewage Farm, 24,610 acres in extent and situated about 24 miles south-west of Melbourne beyond the township of Werribee, serves to purify and dispose of more than 99 per cent. of the sewage flow of the metropolis before its discharge into Port Phillip Bay. The total capital cost (less depreciation) to 30th June, 1948 was £1,618,536. Revenue during 1947-48 (1946-47 in parentheses) amounted to £60,615 (£61,632), cost of sewage disposal £91,368 (£84,947), trading expenses £41,184 (£41,417), interest £61,354 (£56,361), and net cost of sewage purification £133,291 (£121,093). These financial particulars are included in the sewerage items of the summary below.

At 30th June, 1948, the Melbourne and Metropolitan Board of Works had 122 miles of main drains under its control—101 miles of underground, 12 miles of constructed open drains, and 9 miles of natural watercourses and unlined open drains.

(d) *Finances.* The following table provides a summary, for the years 1946-47 and 1947-48, of the financial operations of the three services conducted by the Melbourne and Metropolitan Board of Works :—

(a) Includes depreciation, £395,525. Total loan indebtedness—1946-47, £26,036,165; 1947-48 £26,936,165.

(b) Statutory and general expenditure not distributed over Services.

(ii) *Geelong Waterworks and Sewerage Trust. (a) General.* The Geelong Waterworks and Sewerage Trust, constituted in 1908 and reconstituted under the Geelong Waterworks and Sewerage Act in 1910, consists of five commissioners. The amount of loan money which may be raised is limited to £900,000 for water supply undertaking, £760,000 for sewerage undertaking, and £270,000 for sewerage installation to properties under the deferred payment system. The population supplied is estimated by the Trust at 54,200. This and other general information relates to 30th June, 1948.

(b) *Water Supply.* The catchment area is about 16,000 acres. There are five storage reservoirs and seven service basins whose total storage capacity is 2,738 million gallons. In addition, the State Rivers and Water Supply Commission has made available a supplementary supply of a minimum quantity of 545 million gallons of water per annum from the Bellarine Peninsula System. There are 320 miles of mains within the water supply area. The total expenditure on water supply to 30th June, 1948 was £833,039. Expenditure for 1947-48 comprised £33,447 (£30,130 in 1946-47) on working expenses and £39,381 (£32,378 in 1946-47) on interest, sinking fund and reserves, and the revenue for the year 1947-48 was £72,024 (£68,596 in 1946-47). The sinking fund appropriations at June, 1948 amounted to £109,079. The replacement and contingencies reserve amounted to £136,548. There is a water rate of 1s 3d. in the £1 (with minima of five shillings for unbuilt-on land and £1 for tenements) on the net annual value of ratable properties.

(c) *Sewerage Works.* The sewerage scheme consists of a main outfall sewer to the ocean at Black Rock, about 9 miles from Geelong, and 149 miles of main and reticulation sewers. The sewerage area is 9,571 acres, and the number of buildings within the sewered areas is 13,080, of which 13,061 have been connected. The number of buildings within the drainage area is 13,331. The total expenditure to 30th June, 1948 on sewerage works was £603,578, and on the cost of sewerage installation under deferred payment conditions £257,897, of which £118 is outstanding. The revenue in 1947-48 amounted to £48,269 (£46,674 in 1946-47) and the expenditure comprised £12,132 (£9,920 in 1946-47) on working expenses and £35,475 (£33,289 in 1946-47) on interest, sinking fund and reserves. Sinking fund appropriations at June, 1948 were £97,944. Replacement and contingencies reserve amounted to £113,587. A general rate of 1s. 3d. in the £1 is levied on the net annual value of ratable properties.

(iii) *The Ballarat Water Commission and the Ballarat Sewerage Authority. (a) General.* The Ballarat Water Commission was constituted on 1st July, 1880, and the Ballarat Sewerage Authority on 30th November, 1920. The members of the Water Commission constitute the Sewerage Authority. The Commissioners number seven, three (one of whom is chairman) being appointed by the Government, and four being elected by the Council of the City of Ballarat. General information is as at 31st December, 1948.

(b) *Water Supply.* The Water Supply District embraces an area of about 65 square miles, containing a population of about 50,000. The total storage capacity of the six reservoirs is 2,332 million gallons and the catchment area is 17,545 acres.

The capital cost of construction of the waterworks was £1,109,210 to 31st December, 1948. The liabilities are loans due to the Government, amounting to £612,359 at 31st December, 1948. The revenue for the year 1948 was £58,286 (£44,580 in 1947). Working expenses during 1948 amounted to £31,210 (£26,422 in 1947) and interest and other charges to £28,178 (£22,692 in 1947). A rate is levied of 1s. 1d. in the £1 on the net annual value of all ratable properties, with a minimum of 15s. per annum for land on which there is a building or water supply.

(c) *Sewerage.* The scheme as designed provides for a population of 90,000 persons, but at 30th June, 1948 about 40,000 persons were being served. The capital cost of sewerage construction works to 31st December, 1948 was £515,136. The method of sewage disposal is by sedimentation, oxidation and sludge digestion. One hundred and eleven sewered areas had been declared as at 31st December, 1948. Assessments in the sewerage district numbered 13,143, while those in sewered areas numbered 10,430. There were 9,198 tenements connected.

The scheme is financed by debenture-issue loans from various financial institutions. The liabilities on account of loans secured for construction at 31st December, 1948 amounted to £430,045, redemption payments at that date totalling £138,310. An

expenditure of £157,122 was incurred for house connexions, the whole of which has been redeemed. Revenue during 1948 (1947 in parentheses) amounted to £40,274 (£36,741) and expenditure, including £25,835 (£24,264) on interest and redemption, to £38,609 (£36,426).

A general rate is levied of 1s. 6d. in the £1 of the net annual value of all properties within the drainage area.

(iv) *Sewerage Authorities.* At 30th June, 1948, 47 sewerage authorities had been constituted under the provisions of the Sewerage Districts Acts in districts outside the areas under the control of the Melbourne and Metropolitan Board of Works and the Geelong Waterworks and Sewerage Trust, and systems were in operation in 27 districts (including four partly operating) serving a population of 180,400 persons.

In addition, sewerage authorities were constituted in a further 20 districts at this date, but their operations had either been suspended or had not commenced.

(v) *Water Supply in Country Towns and Districts.* Most of the country waterworks are controlled by the State Rivers and Water Supply Commission, but in some instances the control is by waterworks trusts or by municipal corporations.

The waterworks controlled by the State Rivers and Water Supply Commission at 30th June, 1948 included 35 large reservoirs and 226 subsidiary reservoirs and service basins with a total storage capacity of 536,400 million gallons (1,970,250 acre feet). Length of channels was 15,096 miles (irrigation, 4,450 miles, domestic and stock, 8,489 miles, drainage and flood protection, 2,157 miles) and of pipe lines 1,133 miles. The quantity of water delivered to water users during 1947-48 was 618,839 acre feet (730,413 acre feet in 1946-47). The Commission administered 80 rural districts during 1947-48 (28 irrigation districts, 34 waterworks districts, 4 flood protection districts and 14 drainage districts), and the reticulated pipe supplies for domestic and industrial purposes in 127 urban districts. In addition, 118 urban districts were administered by waterworks trusts and 15 by local governing bodies. The populations served in these groups of urban districts numbered, respectively, 140,840, 235,550 and 78,950 persons. The table below is a summary of the Commission's finances for operations in districts under its control for the years 1946-47 and 1947-48 :—

STATE RIVERS AND WATER SUPPLY COMMISSION, VICTORIA : FINANCES. (a)
(£.)

Year.	Total Loan Capital Expenditure to 30th June.	Receipts.	Payments.				
			Operating Expenses.	Interest on Capital Allotted.	Depreciation.	Redemption.	Total.
1946-47 ..	27,632,136	919,347	1,084,841	39,061	118,701	1,678	1,245,181
1947-48 ..	29,228,673	1,050,528	1,199,552	39,836	55,303	1,660	1,296,351

(a) Excludes Waterworks Trusts and Local Governing Bodies.

The total loan capital expenditure of waterworks trusts and local governing bodies at 30th June, 1948 was £4,573,708, making a grand total of £33,802,381 when added to the figure for works under the control of the Commission. The net loan capital after redemption payments of £1,566,083 was £32,236,298.

The financial operations of the State Rivers and Water Supply Commission form part of Consolidated Revenue Fund, but are included in this section for convenience. The major proportion of the interest payable is borne by the State and is additional to that shown above. The net expenditure borne by the State during 1947-48 was £1,409,488 (£1,246,931 in 1946-47).

3. **Queensland.**—(i) *Department of Works, Brisbane City Council—to 30th June, 1948.* (a) *General.* This organization conducts the water supply and sewerage systems of the City of Greater Brisbane, extending them, in the case of water supply, to the Cities of Ipswich and Redcliffe. Prior to 1928 water and sewerage activities had been controlled by the Metropolitan Water and Sewerage Board, but were then absorbed by the Brisbane City Council.

(b) *Water Supply.* Water storage facilities comprise the following (available capacities are shown in parenthesis):—Somerset Reservoir, 32,000 million gallons (32,000 million gallons); Lake Manchester, 5,806 million gallons (5,725 million gallons); Brisbane River, 543 million gallons (484 million gallons); Pure Water Reservoir, Holt's Hill, 2.5 million gallons (2.5 million gallons); Enoggera Reservoir, 1,000 million gallons (631 million gallons); Gold Creek Reservoir, 407 million gallons (400 million gallons). There are ten service reservoirs with a capacity of approximately 35.1 million gallons. The Somerset reservoir is under the control of the Stanley River Works Board and is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 55,000 million gallons to be for water storage and 145,000 million gallons for flood mitigation. Water rating at 30th June, 1948 was 5d. in the £1 of unimproved capital value for improved properties, and 3d. in the £1 for vacant lands, with a minimum of £3 10s. and £2 6s. 8d. respectively. The following table is a summary of operations of the complete Brisbane City Council system (metropolitan area, Ipswich and Redcliffe) for the years 1946-47 and 1947-48:—

WATER SUPPLY, BRISBANE (a) : SERVICES.

Year.	Services Connected.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for year.	Average Daily Consumption.		Length of Trunk and Reticulation Mains.	Number of Meters.
					Per Service.	Per Head of Estimated Population.		
			Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.	
1946-47	..	98,803	405,093	22.8	8,317	36.3	1,209	52,645
1947-48	..	103,846	425,769	22.9	8,365	53.7	1,330	52,699

(a) Includes Ipswich and Redcliffe.

(c) *Sewerage.* The districts provided for in the Brisbane sewerage scheme comprise the original cities of Brisbane and South Brisbane, the towns of Hamilton, Ithaca, Toowong and Windsor, the shire of Coorparoo and parts of the shires of Stephens, Balmoral, Taringa and Toombul. The sewage treatment works are situated at Luggage Point on the north bank at the entrance to the Brisbane River. The treatment plan is the activated sludge system, but this has not been put into operation, and since the commencement of pumping operations in 1923 a sedimentation plant only has been used. Sewerage rating at 30th June, 1948 was 3d. in the £1 of unimproved capital value for improved properties, and 2d. in the £1 for vacant lands, with a minimum of £2 2s. and £1 8s. respectively. The following table is a summary of operations of the Brisbane Sewerage Scheme for the years 1946-47 and 1947-48:—

SEWERAGE, BRISBANE : SERVICES.

Year.				Premises Connected.	Estimated Population Served.	Total Sewage Pumped for the Year.	Length of Main, Branch, Reticulation, etc. Sewers.
						Mill. gals.	Miles.
1946-47	42,246	173,209	4,539	549
1947-48	43,485	178,289	4,096	567

(d) *Finances.* The following table shows particulars of the finances of the water supply and sewerage undertakings of the Brisbane City Council for the years 1946-47 and 1947-48 :—

WATER SUPPLY AND SEWERAGE, BRISBANE : FINANCES.
(£.)

Service and Year.	Gross Capital Cost.	Revenue.	Expenditure.			Surplus (+) or Deficit (—).
			Working Expenses.	Interest, Redemption, etc. Charges.	Total.	
Water Supply—						
1946-47	6,906,676	744,989	225,343	315,595	596,948	+ 148,041
1947-48	7,150,116	765,936	255,430	335,307	633,982	+ 131,954
Sewerage—						
1946-47	6,763,448	234,932	57,600	224,194	312,152	— 78,120
1947-48	7,048,086	254,777	63,998	246,983	343,259	— 88,482

(ii) *Country Towns.* (a) *Water Supply.* In addition to the city of Brisbane, there were at 30th June, 1947, 90 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils.

(b) *Sewerage Systems.* At 30th June, 1947, there were 12 cities or towns outside the metropolitan area—Bundaberg, Charleville, Cunnamulla, Goondiwindi, Ipswich, Mackay, Maryborough, Quilpie, Rockhampton, Toowoomba, Townsville and Warwick—with sewerage systems. A sewerage system was in course of construction in Mt. Isa.

(c) *Finances.* The receipts (other than loan) of water and sewerage undertakings controlled by the cities and towns referred to above (excluding one joint authority classed as semi-governmental) amounted to £499,084 in 1946-47 (£522,900 in 1945-46). Expenditure amounted to £518,025, including £194,318 for debt charges (£495,891 and £186,512 in 1945-46). In addition, loan expenditure amounted to £233,668 (£157,630 in 1945-46).

4. *South Australia.*—(i) *General.* The water supply and sewerage systems in this State were constructed and are maintained by the Engineering and Water Supply Department under the control of the Minister of Works. The works controlled comprise the Adelaide, Barossa, Baroota Creek, Beetaloo, Bundaleer, Tod River, Warren and other country water districts systems, the Morgan-Whyalla water supply system, the Adelaide metropolitan sewerage system, the Murray River Weirs, water conservation, and the Metropolitan Flood Waters Scheme.

(ii) *South Australian Waterworks—to 30th June, 1948.* (a) *Services.* The table hereunder shows particulars of the area, capacity, etc. of combined metropolitan and country water works for the years 1946-47 and 1947-48 :—

WATERWORKS, SOUTH AUSTRALIA : SERVICES.

Year.	Assessments.(a)		Area of Districts Supplied. (a)	Capacity of Reservoirs, Tanks, etc.	Length of Mains.	Number of Meters.
	Number.	Annual Value.				
		£	Acres.	Million Gallons.	Miles.	
1946-47	198,952	7,190,146	11,932,461	23,920	6,927	103,514
1947-48	203,422	7,405,970	11,953,022	23,927	6,997	104,726

(a) Excludes Morgan-Whyalla Water Supply—water sold by measure.

(b) *Finances.* Figures for 1946-47 and 1947-48 are shown in the following table.

WATERWORKS, SOUTH AUSTRALIA: FINANCES.

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit(-).
			Working Expenses.	Interest and Sinking Fund.	Total.	
1946-47 ..	19,577,522	856,733	542,203	676,604	1,218,807	- 362,074
1947-48 ..	20,229,154	935,693	588,703	680,550	1,269,253	- 333,560

(iii) *Adelaide Waterworks.* At 30th June, 1948 the Adelaide waterworks supplied a district of 143,993 acres. The capacity of its five reservoirs was 14,466 million gallons and there were 1,565 miles of mains.

Approval has been given to schemes (i) for the construction of a large reservoir on the South Para River to provide additional storage to serve the lower northern areas of the State and to make some additional provision for the metropolitan area, and (ii) for bringing River Murray water into Adelaide to supplement the metropolitan and Warren system areas and to serve country areas en route. The capacity of the new reservoir will be about 10,000 million gallons and it will cost about £1,620,000; the pipeline from the Murray near Mannum will deliver about 11,000 million gallons per annum and will cost about £3,390,000.

Particulars of finances for the years 1946-47 and 1947-48 are shown below:—

ADELAIDE WATERWORKS: FINANCES.

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit(-).
			Working Expenses.	Interest.	Total.	
1946-47 ..	6,018,680	521,962	209,107	200,105	409,212	+ 112,750
1947-48 ..	6,253,146	574,687	211,450	203,510	414,960	+ 159,727

(iv) *Adelaide Metropolitan Sewerage.* The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg and Port Adelaide areas, with drainage areas of 86 square miles in all, includes a sewage farm, and treatment works at Glenelg and Port Adelaide. The total quantity of sewage pumped by the various stations was 2,457 million gallons during 1947-48 as compared with 2,071 million gallons during 1946-47. Other particulars for 1946-47 and 1947-48 are shown hereunder:—

ADELAIDE METROPOLITAN SEWERAGE: SUMMARY.

Year.	Length of Sewers.	Number of Con-nexions.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit(-).
					Working Expenses.	Interest and Sinking Fund.	Total.	
	Miles.		£	£	£	£	£	£
1946-47 ..	1,008	93,440	4,034,770	307,190	135,868	144,702	280,570	+ 26,620
1947-48 ..	1,025	102,224	4,176,725	319,077	159,509	145,732	305,241	+ 13,836

(v) *Country Water Supply.* Water district systems outside Adelaide at 30th June, 1948 comprised an area of 11,809,029 acres, and the capacity of the reservoirs was 9,427 million gallons. These figures exclude the Morgan-Whyalla supply system, which obtains its water from the River Murray. The storage tanks of this system had a capacity of 44 million gallons.

Construction work is proceeding on the scheme for the augmentation of the Tod River District supplies, and for the supply of other areas not already served, by utilizing water from the Uley-Wanilla sub-artesian basin at an estimated cost of £1,500,000.

At the request of the Commonwealth, arrangements have been made for the Engineering and Water Supply Department to undertake the construction above ground of a 10-in. pipeline, together with service reservoirs, pumping stations, etc., from Port Augusta to the Rocket Range at Woomera, a distance of about 110 miles.

The following table gives financial information on country waterworks for 1946-47 and 1947-48 :—

COUNTRY WATERWORKS, SOUTH AUSTRALIA : FINANCES.(a)

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+ or Deficit(-)).
			Working Expenses.	Interest.	Total.	
1946-47 ..	11,231,493	244,495	307,379	394,392	701,771	- 457,276
1947-48 ..	11,643,730	270,738	337,557	395,246	732,803	- 462,065

(a) Excludes Morgan-Whyalla system.

(vi) *Morgan-Whyalla Water Supply Scheme.* This scheme, which involved the laying of 223 miles of main, was officially opened on 31st March, 1944, the capital invested to 30th June, 1948 being £2,529,956. Particulars of this scheme, where applicable, are included in the tables of the combined waterworks in section (ii) above. The water is sold by measure; hence particulars of assessments and area supplied do not apply. During 1946-47 the water used from the system between Hanson and Whyalla amounted to 508 million gallons and during 1947-48 to 814 million gallons. Revenue for the year 1946-47 was £112,962, working expenses, etc. £48,403, interest charges, £82,107 and net loss £17,548. Corresponding figures for 1947-48 were, respectively, £119,967, £69,395, £81,794 and £31,222.

5. *Western Australia.*—(i) *General.* The water supply and sewerage systems of Western Australia are principally under the management of Government Departments, and are divided into the following categories :—(a) Metropolitan Water Supply, Sewerage and Drainage, covering Perth, Fremantle, Claremont, Guildford, Midland Junction and Armadale District; (b) Goldfields Water Supply; (c) Water Supply of other towns, etc.; (d) Agricultural Water Supply; and (e) Artesian and sub-artesian waters.

(ii) *Metropolitan Water Supply, Sewerage and Drainage.* (a) *General.* The sources of the metropolitan water supply are the Canning Dam, Churchman Brook, Wongong Brook, Victoria Reservoir, Armadale Pipe Head Dam and Well, and certain bores. The largest reservoir, the Canning Dam, has a capacity of 20,550 million gallons, about four and a half times that of the Mundaring Reservoir to which it is linked by a pipe line.

The sewage treatment works of Perth and suburbs consist of primary sedimentation with separate sludge digestion and discharge of all effluent direct to the ocean. Fremantle treatment works consist of septic tanks with ocean outfall for effluent. There are three treatment works, situated at West Subiaco, Swanbourne and Fremantle.

(b) *Water Supply.* The following table shows particulars of water supply services for 1946-47 and 1947-48 :—

METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA : SERVICES.

Year.	Number of Services.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for Year.	Average Daily Consumption.		Length of Mains.	Number of Meters.
					Per Service.	Per Head of Estimated Population.		
			Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.	
1946-47 ..	70,970	279,000	24.7	9,022	348	88.6	1,107	42,968
1947-48 ..	73,601	284,915	26.9	9,838	365	94.4	1,137	44,795

Water rating for 1947-48 was 1s. 6d. in the £1 on annual valuation, with a minimum of 10s.

(c) *Sewerage and Drainage.* Some particulars of the metropolitan sewerage and drainage services for 1946-47 and 1947-48 are shown below :—

METROPOLITAN SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA : SERVICES.

Year.	Houses Connected.	Estimated Population Served.	Sewage Pumped for the Year.(b)	Length of Sewers.	Length of Stormwater Drains.
			Mill. gals.	Miles.	Miles.
1946-47.. ..	44,638	(a)	2,160	536	33
1947-48.. ..	45,977	193,103	2,263	550	34

(a) Revised Census figure not available.

(b) Aggregate of quantities pumped by the various stations.

Sewerage rating for 1947-48 was 1s. 2d. in the £1 on annual valuation, with a minimum of 7s. 6d. Stormwater drainage rating was 5d. with a minimum of 2s. 6d.

(d) *Finances.* The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Department for the years 1946-47 and 1947-48 :—

METROPOLITAN WATER SUPPLY AND SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA : FINANCES,
(£.)

Service and Year.	Capital Cost.	Revenue.	Expenditure.			Surplus (+) or Deficit (-).
			Working Expenses.	Interest and Sinking Fund Charges.	Total.	
Water Supply—						
1946-47	5,516,603	372,168	110,572	236,432	347,004	+ 25,164
1947-48	5,669,789	392,761	117,930	243,613	361,543	+ 31,218
Sewerage and Drainage—						
1946-47	3,992,651	219,359	47,401	190,472	237,873	— 18,514
1947-48	4,148,756	223,090	51,119	196,965	248,084	— 24,994

(iii) *Goldfields Water Supply.* The source of supply for Kalgoorlie, Coolgardie and adjacent goldfields, as well as for the towns and districts on or near the pipeline, is the Mundaring Reservoir, which has a capacity of 4,650 million gallons. This scheme is

now linked by pipeline with the Canning Dam. Plans have been formulated by the State Government, assisted financially by the Commonwealth Government, for a comprehensively reticulated water scheme at an estimated cost of approximately £4,000,000 to serve an area of about 4,000,000 acres of farm lands and some 23 agricultural towns including the principal towns on the Great Southern Railway, and to increase the supply to the Eastern Goldfields to permit expansion of the gold-mining industry. The scheme involves the raising of the impounding walls of Mundaring Weir and Wellington Dam to increase the storage capacity of these reservoirs to 15,000 million and 38,000 million gallons respectively. The following table shows details for 1946-47 and 1947-48 :—

GOLDFIELDS WATER SUPPLY. WESTERN AUSTRALIA : SUMMARY.

Year.	Number of Services.	Total Consumption.	Length of Water Mains.	Number of Meters.	Capital Cost.	Revenue.	Expenditure. (a)	Surplus (+) or Deficit (-).
		Mill. gals.	Miles.		£	£	£	
1946-47 ..	15,130	1,975	1,757	13,163	6,283,631	343,500	396,964	— 53,464
1947-48 ..	15,411	2,028	1,768	13,423	6,425,775	338,892	480,571	— 141,679

(a) Includes interest and sinking fund.

(iv) *Water Supply of Other Towns, etc.* (a) *Controlled by Public Works Department.* During 1947-48 (1946-47 in parenthesis) water supplied to other towns and districts, excluding minor water supplies, amounted to 534 (500) million gallons, including service to adjacent mines, 17,188,700 (19,796,700) gallons, and railways, 49,542,500 (46,267,600) gallons. Estimated population served numbered 34,655 (34,648).

(b) *Controlled by Commonwealth and State Government Railways.* Consumption for the year ended 30th June, 1948 (1946-47 in parenthesis) was 347 (332) million gallons. In addition, 423 (359) million gallons were obtained from other sources, mainly the Goldfields Water Scheme and the Metropolitan Water Supply.

(c) *Water Boards not Controlled by Government.* During 1947-48 (1946-47 in parenthesis) approximately 351 (332) million gallons of water were supplied to an estimated population of 17,135 (20,183).

(v) *Agricultural Water Supply.* During the thirty-eight years from 1st July, 1910 to 30th June, 1948, 553 tanks were built, 385 wells sunk, and 3,911 bores put down to a total depth of 209,787 feet. Of the bores put down, 642 yielded fresh, and 383 stock, water.

(vi) *Artesian and Sub-artesian Waters.* Up to 30th June, 1948 the total number of bores put down in search of artesian or sub-artesian water and in which water was struck (exclusive of operations by Defence Services) was 451, ranging in depth from 21 to 4,006 feet.

6. *Tasmania.*—(i) *Waterworks.* At the end of 1947-48 (1946-47 in parenthesis) there were 36 (36) municipal waterworks in Tasmania. The capacity of the reservoirs was about 870 million gallons, the estimated population served was 171,512 (165,303), the number of properties assessed was 53,429 (52,738), and the length of aqueducts, mains and reticulation was about 1,000 miles. Costs of construction amounted to £1,874,670 (£1,840,481). The largest of these undertakings is Hobart, with a reservoir capacity at the end of 1947-48 of 578,000 gallons, and 153 miles of reticulation and 92 miles of aqueduct and main.

(ii) *Sewerage.* Sewerage in Tasmania also is the concern of local authorities.

§ 6. Harbour Boards and Trusts.

NOTE.—The number and net tonnage of all vessels which entered the major ports in each State during the years 1938-39 and 1944-45 to 1947-48 are shown in Chapter V.—Transport and Communication, § 3. Shipping at Principal Ports. Particulars of oversea and interstate cargo discharged and shipped during 1947-48 are shown in § 6 of the same chapter.

1. **New South Wales.**—(i) *Maritime Services Board of New South Wales.* (a) *General.* The Maritime Services Board of New South Wales is a corporate body of five Commissioners, three of whom are full-time members and two, representing shipping and commercial interests, part-time members. The Board was brought into existence on 1st February, 1936 by the Maritime Services Act 1935, in order to co-ordinate the port and navigation services of the State, which had previously been administered by the Sydney Harbour Trust and by the State Department of Navigation.

The Board exercises general control over intra-State shipping, including the survey and certification of vessels, the licensing of harbour craft and the examination and issue of certificates to officers; is responsible for the provision of pilotage services, lights, beacons, buoys and other port facilities; imposes and collects rates and charges on goods and vessels; and is vested with the general control and management of the navigable waters and ports within the State.

At the Port of Sydney the Board is also responsible for the provision of adequate wharfrage and channels, and carries out all construction, maintenance and dredging work. At other ports of New South Wales such work is undertaken by the Department of Public Works on behalf of the Board.

(b) *Port of Sydney.* The entrance to Sydney Harbour is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as "The Heads", and the Harbour proper, a distance of 4 miles, there are two separate channels, each 700 feet wide, the Western Channel not less than 43 feet deep low water ordinary spring tides and the Eastern Channel 40 feet deep. The foreshores, which have been reduced by reclamations, are 152 miles in length and the total area of the port is 13,600 acres, or 21 square miles, of which about one-half has a depth of 30 feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

Excluding ferry wharves and jetties used for private purposes, there are 64,676 feet of wharfrage controlled by the Maritime Services Board and 9,928 feet of commercial wharfrage privately owned. Ferry berths cover 3,427 feet, and the total for all purposes is 78,031 feet. Depth of water at wharves is up to 40 feet. The principal wharves are leased to shipping companies whose vessels engage regularly in the trade of the port; the remainder are reserved for vessels which visit the port occasionally. There is ample shed accommodation for normal demands and the port is well equipped with railway wharfrage for the handling of traffic which is required to pass direct from ship to rail and vice versa. For the wheat export trade, in both bulk and bag, ample wharfrage accommodation and handling equipment of the most modern character are available. Special facilities for the storage and handling of other staple products such as wool, etc., are provided on the waterside, and modern plant has been installed for replenishing ships' bunkers with oil or coal. Facilities in all directions can be very considerably extended when required.

The docking facilities comprise five large graving docks, four floating docks and eight patent slips. The Captain Cook Graving Dock, opened in March, 1945, is capable of accommodating the largest vessel afloat.

The following table shows particulars of the finances of the Board for 1946-47 and 1947-48 in respect of the Port of Sydney:—

MARITIME SERVICES BOARD: FINANCES OF THE PORT OF SYDNEY.

(£.)

Year.	Total Capital Debt.	Revenue.			Expenditure.			Surplus.
		Wharfrage and Tranship- ment Rates.	Tonnage Rates and Berthing Charges.	Total.	Adminis- tration and Mainten- ance.	Interest, Sinking Fund, Exchange, etc.	Total. (a)	
1946-47..	11,097,221	725,903	158,521	1,379,882	702,833	540,240	1,243,073	136,809
1947-48..	11,242,120	759,014	167,406	1,446,779	793,319	530,159	1,323,478	123,301

(a) Excludes capital expenditure: 1946-47—£153,854; 1947-48—£282,345.

(c) *Port of Newcastle.* Newcastle Harbour is administered by the Maritime Services Board and an advisory committee consisting of five members appointed by the Governor. In regard to volume of shipping entered, Newcastle ranks second in importance in New South Wales and third in Australia. It is primarily a coal-loading port, but its activities cover the shipment of general commodities. The wharfrage and other facilities of the port have been further improved and extended to meet the actual and the anticipated growth of trade with the expansion of industry in the district. Facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

Wharfrage accommodation amounts to 19,756 feet, of which the Maritime Services Board controls 6,211 feet, the Railways Department 7,719 feet, and private shipping companies 2,200 feet. Depths of water range from 25 to 28 feet (low water ordinary spring tide).

(d) *Port Kembla.* As from 3rd May, 1948, the Maritime Services Board assumed the administration and navigational control of Port Kembla, which had previously been administered by the New South Wales Department of Public Works. The Department will, however, continue to be the constructing authority in respect of works, dredging and maintenance. In respect of volume of shipping entered Port Kembla ranks third in the ports of New South Wales, and about eighth in those of Australia. It has an area of approximately 330 acres with depths ranging from 20 to 50 feet (low water ordinary spring tide), and wharfrage accommodation has been provided for large ocean-going vessels. Being adjacent to the southern coalfields and a rapidly developing centre of secondary industries, its trade is growing and a great future for the port is predicted.

(e) *Other Ports.* In addition to the ports of Sydney, Newcastle and Port Kembla, the Board controls 29 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

(ii) *Port Charges.* The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Federal Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1st February, 1936, the State enactments have been administered by the Maritime Services Board. The gross collections by the State authorities amounted to £1,751,000 in 1946-47 and £1,832,000 in 1947-48. These figures include the Port of Sydney revenue (*see* table above) and State navigation service collections (£371,107 in 1946-37 and £385,118 in 1947-48). Commonwealth Government revenue from light dues, navigation receipts, etc. for the whole of Australia amounted to £147,616 in 1946-47 and £175,631 in 1947-48.

2. *Victoria.*—(i) *Melbourne Harbor Trust.* (a) *General.* Information regarding the origin and constitution of this Trust, which controls the Port of Melbourne, appears in Official Year Book No. 12, p. 970 *et seq.* At 31st December, 1948, the sheds available for wharfrage accommodation had a length of 19,606 feet, covering an area of 1,340,888 square feet. The area of water in the bay and River Yarra under the control of the Trust is approximately 5,327 acres and the total length of wharves, piers and jetties in the port is 61,740 feet, giving an area of over 58 acres of wharfrage, and 53,109 feet of effective berthing space. The depths of water (low water ordinary spring tide) of main channels and at principal wharves are about 30 feet, the maximum being about 36 feet.

(b) *Finances.* The following table shows particulars of the financial operations of the Trust during the years 1947 and 1948 :—

MELBOURNE HARBOR TRUST : FINANCES.
(£.)

Year.	Revenue.			Expenditure.				Surplus.
	Gross Loan Indebtedness.	Wharfage and Tonnage Rates.	Total. (a)	Administration and Maintenance.	Interest, Sinking Fund, Exchange, etc.	Depreciation, Renewals and Insurance Account.	Total. (a) (b)	
1947 ..	3,937,709	819,425	1,113,456	399,641	238,084	123,940	944,516	168,940
1948 ..	3,820,203	961,925	1,313,813	471,039	220,463	134,230	1,037,152	276,661

(a) Includes statutory payments to Consolidated Revenue and Geelong Harbour Trust : 1947, £182,851; 1948, £211,420. (b) Excludes capital expenditure : 1947, £375,705 ; 1948, £393,240.

(ii) *Geelong Harbor Trust.* The Geelong Harbor Trust was constituted in 1905, and reconstituted in 1934 under the provisions of the Melbourne and Geelong Harbor Trusts Act 1934. The Trust is under the control of three Commissioners appointed by the Governor-in-Council. Revenue for the years 1947 and 1948 was £116,501 and £132,610 respectively, and revenue expenditure was £87,197 and £112,503. Payments made in respect of capital works amounted to £60,935 in 1947 and to £84,731 in 1948, and loans outstanding at the end of each year amounted to £525,504 and £517,414. Depths of water available in Geelong harbour range from 24 to 29 feet (low water ordinary spring tide).

(iii) *Other Ports.* Portland is the only Victorian port other than Melbourne and Geelong of more than minor importance.

3. *Queensland.*—(i) *General.* The ports of Queensland, except Brisbane and certain minor ports, are administered by Harbour Boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.

(ii) *Brisbane.* Brisbane accommodates comfortably, in its dredged and improved river, the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly, because of the increasing size of vessels, are still within easy access of the city. The maximum depths (low water ordinary spring tide) of the shipping channel decrease from 33 feet in the North-West channel to 18 feet in the Bulimba Reach to Victoria Bridge section. Depths at wharves vary between 24 and 30 feet. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1946-47 and 1947-48 are shown below :—

BRISBANE HARBOUR : FINANCES.
(£'000.)

Year.	Loan Indebtedness.	Revenue.		Expenditure.		Credit Balance.
		Harbour Dues.	Total.	Working Expenses.	Total (including Interest and Redemption).	
1946-47 ..	1,163	149	171	133	212	132
1947-48 ..	1,219	153	222	126	209	145

In addition to Brisbane Harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, the Brisbane River, and ten smaller harbours not administered by Harbour Boards.

(iii) *Harbour Boards.* Harbour Boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton and Townsville. Finances for each port for the year 1948 are shown below, and a summary for the year 1947 as well as for 1948.

HARBOUR BOARDS, QUEENSLAND : FINANCES, 1948.

(£.)

Harbour Board.	Loan Indebted- ness.	Revenue.		Expenditure (excluding Loan).		Surplus (+) or Deficit(-).
		Wharf- age and Harbour Dues.	Total.	Working Expenses.	Total (including Interest and Red-emp- tion).	
Bowen	268,531	14,012	16,219	5,648	11,992	+ 4,227
Bundaberg	22,529	4,199	11,830	3,127	10,213	+ 1,617
Cairns	156,351	73,642	100,067	84,837	99,672	+ 395
Gladstone	98,985	8,522	13,470	3,680	7,676	+ 5,794
Mackay	365,883	95,716	105,501	8,557	49,997	+ 55,504
Rockhampton ..	511,721	16,981	26,347	29,384	39,204	- 12,857
Townsville	53,076	67,288	93,553	78,467	145,364	- 46,811
Total, 1948 ..	1,477,076	280,360	371,987	213,700	364,118	+ 7,869
Total, 1947 ..	1,481,213	234,872	328,464	205,572	330,022	- 1,558

4. *South Australia.*—*The South Australian Harbours Board.* All South Australian harbours are controlled by the South Australian Harbours Board, which consists of three commissioners, appointed by the Governor for a period of five years and eligible for re-appointment. The Board is responsible to the Minister of Marine for the discharge of its duties and functions, and controls about 60 ports, but at many of them there is little or no shipping movement. The more important are Adelaide, Augusta, Lincoln, Pirie, Wallaroo and Whyalla. Maximum depths of water (low water ordinary spring tide) at the wharves of these ports range from 20 to 24 feet at Pirie to 35 feet at Adelaide (Outer Harbour). The following table shows the finances of the Board for 1946-47 and 1947-48.

SOUTH AUSTRALIAN HARBOURS BOARD : FINANCES.

(£.)

Year.	Capital Expendi- ture to 30th June.	Revenue.	Expenditure from Revenue.				Surplus.
			Working Expenses.	Interest.	Sinking Fund.	Total.	
1946-47 ..	8,283,775	747,071	341,749	288,833	55,069	685,651	61,420
1947-48 ..	8,367,780	873,059	356,459	281,517	57,585	695,561	177,498

5. *Western Australia.*—(i) *Fremantle Harbour Trust.* Fremantle Harbour is controlled by a board of five commissioners appointed by the Governor-in-Council. Maximum depth of water (low water ordinary spring tide) at the entrance to the harbour is 36 feet, and at the wharves 33 feet. The length of wharf berth accommodation is 10,566 feet.

Gross earnings for the year 1946-47 amounted to £656,357, working expenses to £432,08c, interest, £127,895, sinking fund, £27,804, renewals fund, £2,000, and payment of surplus cash to Consolidated Revenue, £52,844. Corresponding figures for 1947-48 were: £783,215, £495,822, £128,843, £29,300, £2,000 and £105,169. The total amount debited to loan capital account at 30th June, 1948 was £2,902,966.

(ii) *Bunbury Harbour Board.* The Bunbury Harbour Board consists of five members appointed by the Government. The depth of water at the entrance and at the wharf is 27 feet (low water ordinary spring tide). Berthage accommodation is 3,700 feet. Gross earnings in 1946-47 were £21,753, working expenses £35,513 and interest £30,753 (1947-48, £22,818, £34,815, £28,363). The total amount debited to loan capital account at 30th June, 1948 was £718,086.

(iii) *Other Ports.* Only the ports of Fremantle and Bunbury in Western Australia are under the control of trusts, the remainder are Government operated. Of these Albany, Carnarvon and Geraldton have the largest amount of shipping movement.

6. *Tasmania.* There are seven Marine Boards and two Harbour Trusts in Tasmania. The Marine Boards control the ports of Hobart, Launceston, Circular Head, Burnie and Table Cape, Devonport, Strahan, and King Island (Currie), and the Harbour Trusts those of Smithton and Leven. Aggregate receipts of revenue accounts of all these authorities during the year 1946-47 were £242,524 and expenditures, £286,599, including loan charges, £44,659. Corresponding figures for 1947-48 were £305,614, £318,484 and £48,706. The total receipts of the Hobart Marine Board during 1946-47 were £74,500, loan charges £1,148 and total expenditure £83,629. Corresponding figures for 1947-48 were £134,700, £1,189 and £120,580. Launceston Marine Board receipts during 1946-47 amounted to £77,734, loan charges to £9,934 and total expenditure to £77,734. The figures for 1947-48 were, respectively, £70,405, £9,893 and £71,723. Loan indebtedness of all Marine Boards and Trusts at 30th June, 1948 was £787,885, of which £46,561 was in respect of Hobart and £93,281 in respect of Launceston.

Hobart, Launceston, Burnie and Devonport are the principal ports of Tasmania. In addition to their interstate and intra-state traffic there is also considerable overseas shipping. Depths of water at wharves vary, in general, between 16 and 40 feet (low water ordinary spring tide), but at Hobart the Ocean Pier has a depth of water of from 36 to 60 feet.

§ 7. Fire Brigades.

1. *New South Wales.*—(i) *General.* Under the Fire Brigades Act 1909-1949, a Board of Fire Commissioners, consisting of eight members, operates, and 145 fire districts had been constituted at the end of 1948. The cost of maintenance of fire brigades has been borne in proportions of quarter, quarter, and half by the Government, the municipalities, and the insurance companies concerned, the expenditure so regulated that the proportion payable by the councils in a fire district should not, except in special circumstances, exceed the amount obtainable from ¼d. in the £1 rate on the unimproved capital value of ratable land in the fire district. In June, 1949, legislation was introduced (i) increasing the limit of the Board's borrowing power from £250,000 to £500,000, (ii) providing for the varying of the maximum rate that may be levied by councils and (iii) altering the basis of contributions so that from 1st January, 1950 local councils and the Government will each pay one-eighth and the insurance companies three-quarters.

Other legislation introduced in September, 1949 is designed to improve and modernize the law dealing with the prevention of bush fires and to build up the organization of the bush fire-fighting services. Fire Regions will be established and a Bush Fire Fighting Fund created, to be financed from contributions by the Government, councils and insurance companies in the proportion of one-quarter, one-quarter and one-half, respectively. The contribution of any council shall not exceed one-twentieth of a penny in the £1 on the unimproved capital value of ratable land in the area of the council not being land within a fire district constituted under the Fire Brigades Act 1909-1949.

(ii) *Board of Fire Commissioners of New South Wales.* At 31st December, 1948 the authorized strength of the Fire Brigade throughout the fire districts of New South Wales was 300 officers and 823 permanent, 1,967 volunteer, and 1,818 reserve firemen. Corresponding figures for the Sydney Fire District were 221, 772, 289 and 678. The revenue for the year 1948 (figures for the year 1947 in parenthesis) was £834,870 (£755,880), made up as follows:—From the Government, £204,248 (£185,048); municipalities and shires, £204,248 (£185,048); fire insurance companies and firms, £408,496 (£370,096); and from other sources, £17,878 (£15,688). The disbursements for the year were £902,819 (£752,374).

2. *Victoria.*—(i) *General.* The Fire Brigades Act of 1928 provided for a Metropolitan Fire Brigades Board and a Country Fire Brigades Board each consisting of nine members. In December, 1944 the latter Board was superseded by the Country Fire Authority under an Act of that title, and the number of members was increased to ten. The income of each Board is derived in equal proportions from the Treasury, the municipalities and insurance companies.

(ii) *Metropolitan Fire Brigades Board.* On 30th June, 1948 the Board had under its control 42 stations, 348 permanent staff, 180 special service and clerical, etc. staff, and 141 partially-paid firemen. The total receipts for 1947–48 (1946–47 in parenthesis) were £362,103 (£325,758), comprising contributions £269,769 (£242,687), receipts for services £61,388 (£53,867), and interest and sundries £30,946 (£29,204). The expenditure was £342,760 (£327,821).

(iii) *Country Fire Authority.* This authority, constituted in 1944, is responsible for the prevention and suppression of fires in the “country area of Victoria”, which embraces the whole of the State outside the metropolitan fire district, excluding State forests and certain crown lands. The country area has been divided into 24 fire control regions, three of which (Ballarat, Bendigo and Geelong) are wholly urban and the remainder mixed urban and rural. At 30th June, 1948 there were 170 municipal councils and 121 insurance companies included in the operation of the Act, and 193 urban and 904 rural fire brigades. The effective registered strength of the brigades was 68,343 members.

The receipts for the year 1947–48 (1946–47 in parenthesis) amounted to £114,374 (£94,248). Total expenditure other than loan amounted to £112,347 (£110,378).

3. *Queensland.*—(i) *General.* The Acts of 1920–1931 made provision for the retention of existing fire districts, and for the constitution of new districts. For each district there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows:—The Treasury two-sevenths, insurance companies three-sevenths, and local authorities two-sevenths. All volunteer fire brigades in a district must be registered.

(ii) *Fire Brigades Boards.* At 30th June, 1948 there were fire brigades in 60 towns. The total number of stations was 91, and full-time staff numbered 404, including 14 administrative, 61 officers and 329 firemen. Workshop staff numbered 22. Part-time staff numbered 401, including 59 administrative, 56 officers and 340 firemen. Volunteers numbered 334. The total revenue for the year 1947–48 (figures for 1946–47 in parenthesis) was £285,296 (£227,326), received mainly from the following sources: Government £71,518 (£60,371), local authorities £71,146 (£60,344), insurance companies £106,818 (£89,309), and loans (Government and other), £17,329 (£5,472). The total expenditure for the year was £270,740 (£235,170), the chief items being salaries and wages £179,032 (£158,426) and interest and redemption of loans, £23,253 (£22,259).

4. *South Australia.*—The Fire Brigades Act 1936–1944 provides for a board of five members, and the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury, five-ninths by insurance companies, and two-ninths by the municipalities concerned. The contribution of the Treasury, however, is limited to £10,000 and if two-ninths of the expenses and maintenance exceeds this amount, five-sevenths of the excess is contributed by the insurance companies and two-sevenths by the municipalities. At 30th June, 1948 there were altogether 33 fire brigade stations,

and the authorized strength of the permanent staff was 285, including 191 officers and men and 77 country auxiliary firemen. The total revenue for the years 1946-47 and 1947-48 was £104,850 and £114,471 respectively.

5. **Western Australia.**—Under the 1942 Act certain Municipal and Road Board Districts are constituted fire districts under the control of the Western Australian Fire Brigades Board. There were 27 at 30th June, 1948. The income of the Board is derived in the proportion of two-ninths from the Government, two-ninths from Local Government Authorities, and five-ninths from insurance companies. The brigades throughout the State controlled by the Western Australian Fire Brigades Board number 43, with a staff of 1,164, including 207 permanent officers and firemen and 942 volunteer brigade officers and firemen. The revenue for the year ended 30th September, 1947 was £118,818 and the expenditure £111,112. Corresponding figures for the year ended September, 1948 are £118,468 and £120,500.

6. **Tasmania.**—The Fire Brigades Act 1945 provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of the 22 existing Fire Brigades Boards, while leaving the responsibility for individual control and management with the Boards. The Commission consists of five members nominated or elected by the Fire Brigades Boards and one member nominated by the Minister. Contributions towards the cost of operations remain on the old basis of one-third each from the Treasury, the municipalities and the insurance companies concerned. The cost for the year 1946-47 amounted to £24,703 and for 1947-48 to £30,795. There were at 30th June, 1948 26 stations amongst the 22 brigades, and their aggregate staffs numbered 345, including 45 permanent officers and 277 partially-paid firemen including officers.

CHAPTER XVI.

PRIVATE FINANCE.

NOTE.—This chapter, for convenience, has been sub-divided into six sections as follows :—

Currency; Banking, including Savings Banks; Companies; Insurance;
Friendly Societies; and Probates and Letters of Administration.

A. CURRENCY.

§ 1. General.

The Australian monetary system is based on the British system of which the unit is the pound (£) divided into 20 shillings (s.) each of 12 pence (d.). When the Australian currency was introduced in 1909 the Australian sovereign was identical in weight and fineness with the English sovereign. As the currency was then based on a gold standard the Australian pound was equivalent to the sovereign (i.e. 123.27447 grains of gold $11\frac{1}{12}$ ths fine or 113.002 grains of fine gold) and, until the depression in 1930, was generally regarded as identical with the pound sterling. There was a gradual depreciation of the Australian pound in terms of sterling from the beginning of 1930 until 3rd December, 1931, when it was stabilized at the rate of £125 Australian = £100 sterling. This relationship has been maintained until the present time. Following the depreciation, no action was taken to define the value of the Australian pound in terms of gold until 5th August, 1947, when the Australian Government advised the International Monetary Fund, in terms of the agreement, that the par value of the Australian pound was 2.86507 grammes (44.2148 grains) of fine gold. From 19th September, 1949 this was reduced to 1.99062 grammes (30.720 grains) of fine gold.

When the Commonwealth was established in 1901, the currency in Australia consisted of United Kingdom gold, silver and bronze coins, bank notes issued by the trading banks, and Queensland Treasury notes. Queensland Treasury notes were in circulation in Queensland only, having superseded bank notes in that State after the 1893 crisis. Under the Commonwealth Constitution the control of currency, coinage and legal tender and the issue of paper money were vested in the Commonwealth. The Commonwealth assumed these powers by enacting the Coinage Act 1909 and the Australian Notes Act 1910.

§ 2. Coinage.

1. **Coins in Circulation.**—Brief historical notes relating to the Australian Coinage are given in Official Year Book No. 37, pages 557 and 558. Coins at present in circulation are :—

Silver—Crown (5s.), florin (2s.), shilling (1s.), sixpence (6d.) and threepence (3d.).
Bronze—Penny and half-penny.

The silver coins issued prior to July, 1947 have a millesimal fineness of 925 (thirty-seven fortieths silver and three fortieths alloy) and those issued after 1st July, 1947 have a millesimal fineness of 500 (one half silver and one half alloy). Details of the standard weight and fineness of Australian coins are given in earlier issues of the Official Year Book (*see* No. 37, page 558).

From 1910 to 1916 Australian coins were minted in England by the Royal Mint, London. From 1916 they were minted at the Melbourne Branch of the Royal Mint. During and since the 1939–45 War the Melbourne Mint has been unable to meet the

demand for Australian coins and some coins have been minted at the Perth Mint and at mints in the United States of America and India. Details of Australian coins obtained from mints outside Australia from 1910 onward are given in the following table:—

AUSTRALIAN COINS OBTAINED FROM MINTS OUTSIDE AUSTRALIA.
(£.)

Total	3,649,820	512,010	35,340	133	4,249,143	3,651	19	3,670
Net Issues to 30th June, 1949	275,600	18,624,280	4,933,890	2,964,660	3,079,367	29,825,957	1,256,862	442,356	1,699,218

(a) Total Silver Coin includes £49,106 for which denominations are not available. (b) Includes half-pence. (c) Included with pence. (d) Total Silver Coin includes £2,640 for which denominations are not available. (e) Total Silver Coin includes £94 for which denominations are not available.

Coin withdrawn during 1947-48 and 1948-49 includes a considerable quantity of silver coin withdrawn for recoinage.

3. **Legal Tender.**—Imperial gold coins of the specified weight and fineness are legal tender in Australia for any amount. Australian silver coins are legal tender for any amount not exceeding forty shillings and Australian bronze coins are legal tender for any amount not exceeding one shilling.

4. **Profits on Coinage of Silver and Bronze.**—Australian silver and bronze coins are token coins and, as the face value of the coins is greater than the value of the bullion they contain, a profit is made from their issue. This profit forms part of the Commonwealth Consolidated Revenue. In the following table details are given of the value of coins issued, the cost of bullion, the cost of minting and sundry expenses connected with the issue, and the profits made on the issue of coins during the years 1938-39 and 1944-45 to 1948-49.

1948-49 ..	1,630,760	604,272	184,031	851,457	211,622	639,835

(a) Face value of coin less value of bullion recovered. (b) Included with cost of minting and sundry charges. (c) During 1946-47 a considerable quantity of new silver coin was minted but not issued until 1947-48. The cost of minting this coin is included and consequently a loss resulted.

NOTE.—Minus sign (—) denotes loss.

5. **Australian Mints.**—(i) *General.* Soon after the discovery of gold in Australia a branch of the Royal Mint was established in Sydney. The formal opening took place on 14th May, 1855. The Melbourne branch was opened on 12th June, 1872, and the Perth branch on 20th June, 1899. The States of New South Wales, Victoria and Western Australia provided an annual endowment in return for which the mint receipts were paid into the respective State Treasuries. Owing to losses incurred in its operations, the Sydney branch was closed at the end of 1926.

Since their establishment, the Australian branches of the Royal Mint have been primarily concerned with the refining of gold, minting of Imperial gold coins and the production of bars and ingots of gold bullion for export. The minting of Imperial gold coins was discontinued in September, 1931. In 1916 the Melbourne branch took over from the Royal Mint, London, the minting of Australian silver and bronze coins, and during the 1939-45 War the Perth branch commenced minting Australian coins. The Melbourne branch has also minted token coins for the Territory of New Guinea and for New Zealand.

(ii) *Gold Receipts and Issues.* (a) *Receipts.* The receipts of gold during 1947, 1948 and 1949 and the aggregate at each mint to the end of 1949 were as follows :—

AUSTRALIAN MINTS : RECEIPTS OF GOLD.

Mint.	Deposits during year (Oz.)—			Total to end of 1949.		
				Quantity (Oz.)		Value(£).(b)
	1947.	1948.	1949.	Gross.	Fine.	
Sydney(a)	42,082,928	36,907,045	156,771,141
Melbourne..	265,625	231,228	284,422	47,511,740	42,322,931	179,776,270
Perth ..	1,032,388	920,418	899,269	52,057,351	41,278,133	175,338,249
Total	1,298,013	1,151,646	1,183,691	141,652,019	120,508,109	511,885,660

(a) To end of 1926, when the mint was closed.

(b) At £3 17s. 10½d. per standard ounce.

(b) *Issues.* The Australian mints issue gold bullion for the use of local manufacturers (jewellers, dentists, etc), and for export. Since September, 1931, when the United Kingdom departed from the gold standard, the minting of gold coins by Australian mints has ceased. Australian exports of gold are mainly in the form of 400-oz. ingots, but in earlier years a considerable amount of gold was shipped in 10-oz. bars to India. Since early in the 1939-45 War all gold has been acquired by the Commonwealth Bank and the export and use of gold has been subject to regulation by the Commonwealth Government. The issues during the years 1947 to 1949, and the total to the end of 1949, are shown in the table below :—

AUSTRALIAN MINTS : ISSUES OF GOLD.

(£.)

Mint.	Coin.			Bullion.(a)	Total.
	Sovereigns.	Half-sovereigns.	Total.		
1947—					
Melbourne	644,667	644,667

(a) Value expressed at £3 17s. 10½d. per standard ounce.

6. **Price of Gold.**—The following table shows the average prices of gold and the average value of the sovereign in London and Australia for the years 1938-39 to 1948-49. The average price of gold in Australia is based on the Commonwealth Bank's buying price for gold lodged with the mints.

PRICE OF GOLD : LONDON AND AUSTRALIA.

Period.	London.		Australia.			
	Average price per fine oz.	Average value of Sovereign.	Average price per fine oz.	Sovereign.		
				Average value.	Equivalent to a premium of—	
	£stg. s. d.	£stg. s. d.	£A. s. d.	£A. s. d.	%	
1938-39 ..	7 6 9	1 14 7	9 2 9	2 3 0	115.0	
1939-40 ..	8 4 10	1 18 8	10 8 4	2 9 1	145.4	
1940-41 ..	8 8 0	1 19 7	10 13 5	2 9 2	145.8	
1941-42 ..	8 8 0	1 19 7	10 11 4	2 8 7	142.9	
1942-43 ..	8 8 0	1 19 7	10 9 0	2 8 0	140.0	
1943-44 ..	8 8 0	1 19 7	10 9 0	2 8 0	140.0	
1944-45 ..	8 8 3	1 19 7	10 11 10	2 8 9	143.8	
1945-46 ..	8 12 3	2 0 7	10 15 3	2 10 0	150.0	
1946-47 ..	8 12 3	2 0 7	10 15 3	2 10 0	150.0	
1947-48 ..	8 12 3	2 0 7	10 15 3	2 10 0	150.0	
1948-49 ..	8 12 3	2 0 7	10 15 3	2 10 0	150.0	

From 19th September, 1949, when sterling was devalued, the price of gold in London was increased from £8 12s. 3d. per fine ounce to £12 8s. per fine ounce. The price of gold in Australia was increased from £10 15s. 3d. per fine ounce to £15 9s. 10d. per fine ounce. The value of the sovereign increased from £2 os. 7d. to £2 18s. 5d. in London and from £2 10s. to £3 12s. in Australia.

§ 3. Notes.

1. **General.**—Brief historical notes relating to the circulation and issue of notes in Australia are given in Official Year Book No. 37, pages 501 and 502. The issue of notes, intended for circulation as money, by any person, bank or State other than by the Commonwealth Bank is prohibited.

2. **The Australian Note Issue.**—(i) *General.* Notes in circulation in Australia are issued by the Commonwealth Bank through the Note Issue Department. The Bank is authorized to issue Australian notes in denominations of 5s. 10s., £1, £5, £10 and any multiple of £10. The Commonwealth Bank is not required to hold a specific reserve in gold against the note issue, but the assets of the Note Issue Department must be held or invested in gold, on deposit with any bank or in securities of the Government of the United Kingdom, the Commonwealth or a State. All profits of the Note Issue Department, with the exception of £150,000 per annum paid to the Mortgage Bank Department of the Commonwealth Bank, are paid to the Commonwealth Consolidated Revenue Fund. The payment of the amount of £150,000 per annum to the Mortgage Bank Department will cease when the capital of that Department is £4,000,000.

Australian notes are legal tender to any amount within Australia and have been issued in denominations of 10s., £1, £5, £10, £20, £50, £100 and £1,000.

(ii) *Australian Notes in Circulation.* Particulars of the average values of notes in circulation for the years 1938-39 and 1944-45 to 1948-49 are given in the following table:—

Other Liabilities(a) . .	2,177	2,282	Other Assets . .	62	92
Total Liabilities . .	203,537	219,850	Total Assets . .	203,537	219,850

(a) Notes of a denomination not exceeding one pound which have been on issue for more than twenty years, and notes of a denomination exceeding one pound which have been on issue for more than 40 years are not included in the item "Notes on Issue" but are included in the item "Other Liabilities".

Until the end of 1943 all the net profits of the Note Issue Department, except £2,000,000 paid between 1926 and 1933 to the capital account of the Rural Credits Department, were paid to the Commonwealth Treasury. The Commonwealth Bank Act amendment of 1943 which established a Mortgage Bank Department provided for the transfer of £1,000,000 from the Special Reserve and for an annual payment of £150,000 from the Note Issue profits towards the capital of the new department, the latter payments to cease when the capital amounts to £4,000,000. In 1947-48 the net profits of the Note Issue Department amounted to £4,237,000, of which £4,087,000 was paid to the Commonwealth Treasury and £150,000 to the capital account of the Mortgage Bank Department. In 1948-49 the net profits amounted to £4,610,000 of which £4,460,000 was paid to the Commonwealth Treasury and £150,000 to the capital account of the Mortgage Bank Department.

§ 4. Legal Tender Extant.

Accurate information regarding the amount of legal tender in circulation is not available, but the following table provides an estimate of the amount of legal tender extant about the middle of the years 1939 and 1945 to 1949.

ESTIMATED LEGAL TENDER EXTANT : AUSTRALIA.
(£'000.)

Particulars.	1939. (a)	1945. (a)	1946. (a)	1947.	1948.	1949.
Australian Notes(b)—						
Held by Banks ..	14,829	15,934	17,291	19,937	22,766	23,744
Held by Public ..	32,701	169,810	181,673	183,643	173,839	189,111
Coin(c)—						
Gold(d)—Held by Banks(e)	79	59	78	81	82	86
Held by Public
Silver—Held by Banks(e)	2,508	4,340	6,077	5,168	6,720	6,803
Held by Public ..	6,830	20,496	20,235	21,058	22,236	22,712
Bronze—Held by Banks(e)	132	225	189	169	162	143
Held by Public	521	1,123	1,214	1,260	1,371	1,556
Total	57,600	211,987	226,757	230,416	227,176	244,155

(a) Prior to 1947 withdrawals of coin were negligible and no allowance has been made for coin withdrawn in the estimates for the years 1939, 1945 and 1946. (b) Last Monday in June to 1946. Last Wednesday in June thereafter. (c) See paragraph below. No allowance has been made for coin lost or destroyed, which, during the war years, may have been considerable. (d) Value—one sovereign equals £1. (e) At 30th June.

The figures given above for silver coin represent the total issues of Australian silver coin less the excess of exports of Australian coins over the reimports of Australian coins. The amount of English coin in circulation in Australia is negligible, and, as it is not possible to ascertain accurately its volume, no allowance has been made for it. The figures given for bronze coins refer to the total issues of Australian coin, the small amount of United Kingdom coin in circulation being disregarded.

B. BANKING.

§ 1. Cheque-Paying Banks.

1. Banking Legislation.—(i) *Commonwealth Legislation.* (a) *General.* Under Section 51 of the Commonwealth Constitution the Commonwealth Parliament has power to legislate with respect to “Banking, other than State banking, also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money”. The principal Commonwealth Acts at present in force relating to Banking are—

- (a) The Commonwealth Bank Act 1945 which replaced the Commonwealth Bank Act 1911–1943, and provides for the constitution and management of the Commonwealth Bank and Commonwealth Savings Bank and the management of the Australian note issue;
- (b) The Banking Act 1945, which provides for the regulation of banking and for the protection of the currency and the public credit of the Commonwealth; and
- (c) The Banking Act 1947, which provides for the expansion of the banking business of the Commonwealth Bank; the taking over, by the Commonwealth Bank, of the banking business in Australia of the private banks, and the acquisition of property used in that business; and the prohibition of private banks carrying on banking business in Australia.

(b) *The Banking Act 1945.* The Banking Act 1945 was assented to on 3rd August, 1945, and came into operation on 21st August, 1945. It applies to all banks except State banks operating in Australia or Territories of the Commonwealth. The objects of the Act are:—(a) To provide a legal framework, uniform throughout Australia, for regulating the banking system; (b) to safeguard depositors of the banks from loss; (c) to provide for the co-ordination of banking policy under the direction of the Commonwealth Bank; (d) to control the volume of credit in circulation and bank interest rates; (e) to mobilize and to provide machinery for the control of the foreign exchange and gold resources of the Australian economy. A summary of the main provisions of the Act is given in Official Year Book No. 37, page 565.

(c) *The Banking Act 1947.* This Act, which was assented to on 27th November, 1947, provided for the acquisition by the Commonwealth Bank of the Australian business and assets of the private banks operating in Australia, and for the prohibition of private banks from carrying on banking business in Australia. The Act did not apply to State banks or savings banks. For a summary of the main provisions of the Act see Official Year Book No. 37, pages 566 and 567.

The validity of this Act was challenged in the High Court by the private banks and the States of Victoria, South Australia and Western Australia, and, in a majority judgment delivered on 11th August, 1948, the Court held that certain vital sections were invalid. An appeal to the Privy Council against part of this judgment was dismissed.

(ii) *State Legislation.* State banking legislation relates to the incorporation of banks and the constitution and management of State banks. The Acts under which the various banks are incorporated differ. While some of the older banks were incorporated by special Act or Charter, e.g., the Bank of New South Wales by Act of Council 1817, the Bank of Australasia by Royal Charter, the Bank of Adelaide by Act of the South Australian Parliament, and the Bank of New Zealand by Act of the General Assembly of New Zealand, most of the banks are incorporated under a Companies Act of the States or the United Kingdom. This is also the case with those banks which were reconstructed after the crisis of 1893. State banks constituted under State Acts transacting general banking business are the Rural Bank of New South Wales, the State Bank of South Australia and the Rural and Industries Bank of Western Australia.

2. *Royal Commission on Monetary and Banking Systems.*—A Royal Commission was appointed by the Commonwealth Government in November, 1935 to inquire into the monetary and banking systems in operation in Australia and to report whether any, and if so what, alterations were desirable in the interests of the people of Australia as a whole, and the manner in which any such alterations should be effected. The Commission presented its report on 15th July, 1937, and a summary of the recommendations appears in Official Year Book No. 31, p. 1010.

3. *Presentation of Banking Statistics.*—Because of the different purposes they serve in the Australian financial system Australian cheque-paying banks have for statistical purposes been divided into three groups and a separate series is presented for each of these groups. These groups are:—

(a) *The Commonwealth Bank.* This is the Central Bank. It also transacts general banking business through a General Banking Division and provides special banking facilities through the Rural Credits, Mortgage Bank and Industrial Finance Departments. Statistics of the Central Banking Business (including the Note Issue Department) and the General Banking Division and Rural Credits, Mortgage Bank and Industrial Finance Departments are presented in separate series.

(b) *Nine Trading Banks.* With the General Banking Division of the Commonwealth Bank these banks provide the major part of the general banking facilities in Australia. The banks included in this group are—The Bank of New South Wales, The Commercial Banking Company of Sydney Ltd., The National Bank of Australasia Ltd., The Commercial Bank of Australia Ltd., The Queensland National Bank Ltd. (in voluntary liquidation), The Bank of Adelaide, The Bank of Australasia, The Union Bank of Australia Ltd., and The English, Scottish and Australian Bank Ltd.

- (c) *Other Banks.* This group consists of (i) three State Government Banks—The Rural Bank of New South Wales, The State Bank of South Australia and the Rural and Industries Bank of Western Australia which, in their general banking business, specialize mainly in financing rural industries, (ii) two joint stock banks—The Ballarat Banking Co. Ltd. and The Brisbane Permanent Building and Banking Co. Ltd. which have specialized business in two districts only, and (iii) branches of three overseas banks—The Bank of New Zealand, Comptoir National D'Escompte de Paris and the Bank of China which transact limited business in Australia and are mainly concerned with financing trade, etc., between Australia and overseas countries.

In addition to the series mentioned above, a series for all cheque-paying banks is presented. This series covers the General Banking Division and Rural Credits, Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank, the Nine Trading Banks and the other cheque-paying banks included in the third group.

Unless otherwise stated, the statistics presented are averages of weekly returns. Averages of liabilities and assets are the averages of the liabilities and assets of the banks on the several weekly balance days during the period concerned. Averages of bank clearings and debits to customers' accounts are the averages of transactions for weeks ended on the balance days during the period.

Until December, 1946 these balance days were the Mondays of each week. From January, 1947 Wednesday became the weekly balance day.

Under the Banking Act 1945 the returns furnished by cheque-paying banks were slightly modified and the figures quoted in the following pages may not in all cases be strictly comparable with those quoted in earlier issues of the Official Year Book. The main changes relate to the classification of assets and liabilities. Under the Commonwealth Bank Act 1945 the Commonwealth Bank was reorganized and figures quoted for this Bank are not comparable with those published in issues of the Official Year Book prior to No. 37.

4. *Banks Transacting Business in Australia.*—(i) *Number of Branches.* At 30th June, 1949 the 18 banks operating in Australia transacted all classes of banking business at 2,871 branches and 978 agencies. The Commonwealth Bank of Australia and the Nine Trading Banks have branches throughout the Commonwealth. The Rural Bank of New South Wales, State Bank of South Australia and Rural and Industries Bank of Western Australia, being State Government banks specializing mainly in financing rural industries, have branches only in those States. Two banks, the Ballarat Banking Company Ltd. and the Brisbane Permanent Building and Banking Co. Ltd., transact business only in Ballarat and Brisbane respectively. The remaining three banks are branches of overseas banks.

(a) Includes dividends declared but not paid at date of balance-sheet. (b) Includes uncalled capital. (c) Dividends paid and payable out of profits earned during 1948-49. (d) The business of the Queensland National Bank Ltd. was taken over by the National Bank of Australasia Ltd. in January, 1948.

(e) Surplus of assets due to valuation of liabilities and assets in Australian currency. (f) Includes £2,256,751 surplus of assets due to valuation of liabilities and assets in Australian currency.

(g) Special Reserve—Premium on gold sold. (h) Total stocks and debentures issued including liability in respect of deposits taken over by the Commonwealth Bank in December, 1931.

(i) Includes £3,754,665 Special Reserve Account established under Section 12 (2) of Rural Bank of New South Wales Act 1932.

NOTE.—In the table all items other than paid-up capital and reserve funds of the Bank of Australasia and the Union Bank of Australia Ltd. are in Australian currency.

5. *Commonwealth Bank.*—(i) *General.* An account of the progress and development of the Commonwealth Bank is given in earlier issues of the Official Year Book (see No. 37, pages 570 to 573). The general functions of the Bank are set out in section 8 of the Commonwealth Bank Act 1945 which states—

“8. It shall be the duty of the Commonwealth Bank, within the limits of its powers, to pursue a monetary and banking policy directed to the greatest advantage of the people of Australia, and to exercise its powers under this Act and the Banking Act 1945 in such a manner as, in the opinion of the Bank, will best contribute to:—

(a) the stability of the currency of Australia; (b) the maintenance of full employment in Australia; and (c) the economic prosperity and welfare of the people of Australia.”

In addition to its functions as a Central Bank, the Bank controls the Australian note issue through a Note Issue Department and provides general banking facilities through a General Banking Division and special services through the Rural Credits Department, Mortgage Bank Department and Industrial Finance Department. The Commonwealth Savings Bank, a separate institution providing for small depositors, is controlled by the Governor of the Commonwealth Bank and is operated in conjunction with the Commonwealth Bank.

(ii) *Management.* The Bank is managed by a Governor who is assisted by an Advisory Council consisting of the Secretary to the Department of the Treasury, the Deputy Governor of the Bank, an additional representative of the Department of the Treasury and two officers of the Bank. The Advisory Council advises the Governor with respect to the monetary and banking policy of the Bank and such other matters as the Governor refers to it.

(iii) *Central Banking Business.* Under the powers it possessed under the Commonwealth Bank Act 1911–1943 and under its war-time powers under the National Security Regulations, the Commonwealth Bank had gradually assumed the functions of a Central Bank. Part III. of the Commonwealth Bank Act 1945 formally constituted the Commonwealth Bank as a Central Bank and granted the Bank the necessary powers to carry on the business of a Central Bank. The capital for the Central Banking Business is £4,000,000 and such other sums as are transferred from the Reserve Fund. The profits of the Central Banking Business are distributed as follows:—(a) One quarter to be placed to the credit of the Commonwealth Bank Reserve Fund; (b) one-quarter to be paid to the Mortgage Bank Department Capital Account; (c) one-half to be paid to the National Debt Sinking Fund. When the capital of the Mortgage Bank Department has reached £4,000,000 the share of profits payable to that department will be credited to the Commonwealth Bank Reserve Fund.

(iv) *Note Issue Department.* This department was established in 1920 when the control of the Australian note issue was transferred from the Commonwealth Treasury to the Commonwealth Bank. The Bank may, through this department, issue, re-issue and cancel Australian notes. All profits of this department, with the exception of £150,000 per annum paid to the Mortgage Bank Department, are paid to Commonwealth Consolidated Revenue.

(v) *General Banking Division.* Under the Commonwealth Bank Act 1911–1943, no provision was made for the separation of the general banking business of the bank from its central banking business. Under the Commonwealth Bank Act 1945 the General Banking Division was set up to carry on the general banking business of the Bank. The

accounts and transactions of this division are kept separate and distinct from the other accounts of the Bank. The capital of the General Banking Division is £4,000,000, and such other sums as are transferred from the General Banking Division Reserve Fund. The profits of the General Banking Division are distributed as follows :—(a) one half to be placed to the credit of the General Banking Division Reserve Fund, and (b) one half to be paid to the National Debt Sinking Fund.

(vi) *Rural Credits Department.* The Rural Credits Department was established in 1925 for the purpose of making short-term credit available for the orderly marketing of primary produce. The Bank may, through this department, make advances, upon the security of primary produce placed under the legal control of the Bank or other security associated with the production or marketing of primary produce, to co-operative associations or marketing boards formed under the laws of the Commonwealth or of a State or Territory of the Commonwealth or other bodies specified by proclamation. The period of the advance shall not be more than one year. The capital of the Rural Credits Department is £2,000,000. Profits are distributed as follows :—(a) one half to be placed to the credit of the Rural Credits Department Reserve Fund, and (b) one half to be placed to the credit of the Rural Credits Department Development Fund for the promotion of Primary Production.

(vii) *Mortgage Bank Department.* The Mortgage Bank Department was established in 1943 for the purpose of making long-term loans to primary producers. Through this department the Bank may make a loan to any person engaged in farming, agricultural, horticultural, pastoral or grazing operations or other form of primary production, upon the security of a mortgage to the Bank of an estate or interest in land in the Commonwealth owned by the borrower. The term of the loan shall not be less than five years nor more than forty-one years. The capital of the department is limited to £4,000,000 and profits are to be credited to the Mortgage Bank Department Reserve Fund.

(viii) *Industrial Finance Department.* The functions of the Industrial Finance Department established in January, 1946 are :—(a) to provide finance for the establishment and development of industrial undertakings ; (b) to assist in the establishment and development of industrial undertakings ; and (c) to provide advice on the operations of industrial undertakings with a view to promoting the efficient organization and conduct thereof. To exercise these functions the Bank may, through the Industrial Finance Department, lend money and purchase and sell shares or securities in an industrial undertaking. The capital of this department is £4,000,000. The Treasurer, the Bank and the Savings Bank may advance money to the Industrial Finance Department. The amount that may be advanced by the Bank is limited to £1,000,000. The profits of the department are to be placed to the credit of the Industrial Finance Department Reserve Fund.

(ix) *Housing Loans.* Provision is made for the Bank, through the General Banking Division, to make loans to individuals or building societies for the erection or purchase of homes or for the discharge of mortgages on homes. These loans must be made at the lowest possible rate of interest. Loans to individuals are to be on *crédit foncier* terms, to be secured by first mortgage on an estate or interest in land owned by the borrower and to be repaid in periods of not less than five years nor more than 35 years. Loans to building societies are to be made on such security and on such terms and conditions as the Bank determines.

(x) *Liabilities and Assets*—All Departments. Liabilities and assets of each department of the Commonwealth Bank at 30th June, 1949 are shown in the following table. The Commonwealth Savings Bank, which is operated as a separate institution, is not included (see § 2, para. 7 (iv) following):—

COMMONWEALTH BANK : LIABILITIES AND ASSETS, 30th JUNE, 1949.
(£'000.)

Item.	Central Banking Busi- ness.	General Banking Divi- sion.	Note Issue Depart- ment.	Rural Credits Depart- ment.	Mort- gage Bank Depart- ment.	Indus- trial Finance Depart- ment.	Total. (a)

9. Classification of Advances within Australia Commonwealth Bank and Nine Trading Banks.—A dissection of advances made by the Commonwealth Bank (General Banking Division, and the Rural Credits, Mortgage Bank and Industrial Finance Departments) and the Nine Trading Banks at the end of December, 1949 is given in the following table. Business advances, which have been classified according to the main industry of the borrower, are those made mainly for business purposes and include all loans to corporate bodies other than public authorities. Advances made to public authorities are those made to Commonwealth, State and Local Governments, Government Agencies and Semi-Governmental Authorities irrespective of the purpose of the advance or the industry in which the authority is engaged. Personal advances, which have been classified according to purpose, include advances to persons in their private capacity for such purposes as the purchase of a house or of household equipment, repayment of personal debts, etc.

(a) All Banks did not take simultaneous action. (b) Bank of New South Wales reduced the rates for 6, 12 and 24 months terms by one-quarter of 1 per cent. from 23rd August, 1932. (c) Commonwealth Bank only. Bank of New South Wales from 2nd March and Bank of Adelaide from 3rd March, 1936. (d) On first £10,000; rate on amount in excess of £10,000 is 1 per cent.

11. **Clearing House Returns.**—(i) *Annual Clearings.* Particulars of the aggregate bank clearings for each capital city, compiled from information supplied by the Commonwealth Bank, Sydney, are given in the following table. Since October, 1920, transactions connected with the issue and redemption of Treasury Bills have resulted in largely inflated clearings. These transactions are of an abnormal character, and have been excluded from the table.

(a) Excludes Treasury Bill transactions.

(ii) *Index of Annual Clearings.* The following index of bank clearings in each capital city for the years 1939 and 1941 to 1949 has been computed from the figures in the previous paragraph. The base used is the average of the years 1936 to 1938. Clearings connected with the issue and redemption of Treasury Bills have been excluded, but no adjustment has been made on account of alterations in the banking system.

INDEX OF BANK CLEARINGS.

Base : Average of Years 1936 to 1938 = 1,000.

(a) Ten months ended June, 1946. (b) From January, 1948 debits to Customers' Accounts relating to the transfer of accounts from the Queensland National Bank Ltd. (in voluntary liquidation) to the National Bank of Australasia Ltd., have been excluded.

13. **Rates of Exchange.**—(i) *Oversea Exchange Rates.* In the following table the average telegraphic transfer rates of exchange for Sydney on a number of oversea countries are given. For the years 1938–39, 1944–45 and 1945–46 the rates quoted are the averages of quotations at the end of each month. For the years 1946–47 to 1948–49 the rates are averages of daily quotations. Generally the averages are based on rates quoted by the Commonwealth Bank of Australia, but where these were not available rates quoted by other Australian Banks have been used.

§ 2. Savings Banks.

1. *General*.—The inauguration of Savings Banks in Australia dates from 1819, when a private Savings Bank was opened in Sydney. In 1832 the legislature created “the Savings Bank of New South Wales” under the control of trustees, and shortly

after its establishment the funds of the private Savings Bank were transferred to the new institution. In the other States provision for placing deposits with Savings Banks dates from 1841 in Victoria; 1854 in Queensland; 1840 in South Australia; 1863 in Western Australia (a Savings Bank was opened in 1856 but was closed a year later); 1835 in Launceston; and 1845 in Hobart. These early banks functioned as Trustee Savings Banks, but, with the exception of the Hobart and Launceston institutions, were later absorbed by, or amalgamated with, Government Savings Banks.

Post Office Savings Banks were established in all States from 1864 onwards. These were separate Government institutions except in South Australia, where the Post Office acted as agent for the Savings Bank. Since the federation of the Australian States in 1900, post offices have been controlled by the Commonwealth Government, but they continued to act as savings bank agencies for the State institutions until the establishment of the Commonwealth Bank in 1912. They now act as agents for the Commonwealth Savings Bank.

Savings banks at present operating are the Commonwealth Savings Bank (all States and Territories); State Savings Bank of Victoria; Savings Bank of South Australia; and the two Trustee Banks—Hobart and Launceston.

2. **Extension of Facilities.**—The prime object of the foundation of savings banks in Australia was the encouragement of thrift, deposits of one shilling and upwards being accepted; nevertheless the facilities offered, while preserving the original object, have led to developments in another direction. Although depositors may not operate on their accounts by means of cheques, they have practically all the other advantages of a current account and in addition receive interest on their minimum monthly balances. No charge is made by the banks for keeping the accounts.

3. **Statistical Returns.**—Commencing with July, 1931, monthly returns have been furnished by savings bank authorities. The information given in the following paragraphs relates to the deposits at 30th June in each year. For convenience of reference the information has been grouped under the following headings:—

(i) All Savings Banks; (ii) Commonwealth Savings Bank; and (iii) State Savings Banks (including Trustee Banks in Tasmania).

4. **Number of Accounts.**—The following table shows the number of savings bank accounts in existence at 30th June, 1948 and 1949. It should be noted that these figures relate to the number of accounts and not necessarily to the number of depositors.

ALL SAVINGS BANKS : NUMBER OF ACCOUNTS.(a)

Bank.	30th June, 1948.		30th June, 1949.	
	Operative.	Inoperative. (b)	Operative.	Inoperative. (b)
Commonwealth Savings Bank ..	3,753,954	1,706,425	3,871,224	1,759,461

(a) Includes deposits transferred from Northern Territory.

(b) Included with South Australia.

(b) *Deposits per head and Purchasing Power.* Particulars of the deposits per head of population, actual and adjusted to purchasing power by the application of retail price index-numbers, at 30th June in each year from 1937 to 1949, are given in the following table. In calculating the index-numbers in this table the average of deposits per head of population at 30th June, 1937, 1938 and 1939 has been used as a base and made equal to 1,000.

ALL SAVINGS BANKS: DEPOSITS PER HEAD OF POPULATION.

At 30th June—				Actual.		Adjusted to Purchasing Power.(a)	
				Deposits per head of population.	Index-Number.	Deposits per head of population.	Index-Number
				£	1937-1939 = 1000	£	1937-1939 = 1000
1939	35.25	1018	34.32	991
1940	33.67	972	31.51	910
1941	35.48	1025	31.68	915
1942	38.20	1103	31.55	911
1943	49.48	1429	38.66	1117
1944	64.51	1863	51.20	1479
1945	76.70	2215	60.89	1758
1946	88.89	2567	69.32	2002
1947	87.08	2515	66.24	1913
1948	88.37	2552	61.75	1783
1949	90.27	2607	57.46	1659

(a) On the basis of the All Items ("C") Series of Retail Price Index-numbers (6 capitals) for June quarter in each year. (Base: average of June quarters, 1937, 1938 and 1939 = 1,000.)

In interpreting the figures above it should be remembered that savings bank accounts are used to some extent by institutions and business people, as well as by individuals for the investment of personal savings. The relative extent to which savings bank accounts are used for business purposes, etc., may, and probably does fluctuate considerably from time to time.

6. *War Savings and Savings Certificates.*—Sales of savings certificates and stamps under the War Savings and Savings Certificate schemes, particulars of which were given in earlier issues of the Official Year Book (see No. 37, page 586), were discontinued after 31st January, 1949, except for some sales made to wind up savings groups, etc. This method of saving was replaced by special savings schemes to operate through the savings banks. Employers were asked to co-operate by forming employee savings groups and by making regular deductions from wages and salaries for payment into group savings bank accounts, and thence, at the end of each quarter to individual accounts. The total value of certificates outstanding at 30th June in each of the last five years was:—1945, £52,534,000; 1946, £54,677,000; 1947, £59,526,000; 1948, £64,483,000 and 1949, £62,198,000.

7. *Commonwealth Savings Bank.*—(i) *General.* The Savings Bank Department of the Commonwealth Bank opened for business in Victoria on 15th July, 1912; in Queensland on 16th September, 1912; in the Northern Territory on 21st October, 1912; and in New South Wales, South Australia and Western Australia on 13th January, 1913. The Tasmanian State Savings Bank was absorbed by the Commonwealth Bank in January, 1913, the Queensland State Savings Bank was taken over in 1920 and the New South Wales and Western Australian State Savings Banks in 1931. The Savings Bank Department was separated from the General Bank on 9th June, 1928, and established as a

separate institution known as the "Commonwealth Savings Bank". It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The Commonwealth Bank Act 1927, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of three members to manage the Savings Bank. This Commission was never appointed and the Commonwealth Bank Act 1945 placed the control of the Commonwealth Savings Bank under the Governor of the Commonwealth Bank.

(ii) *Particulars for Years 1947-48 and 1948-49.* Particulars for the States and Territories for the years 1947-48 and 1948-49 are shown in the table below:—

COMMONWEALTH SAVINGS BANK : PARTICULARS.
(£'000.)

(a) Paid to Rural Bank of New South Wales.

(b) Paid to State Consolidated Revenue Funds.

8. *State Savings Banks.*—(i) *Particulars for Years 1947-48 and 1948-49.* Particulars of the transactions of all State savings banks for the years 1947-48 and 1948-49 are given hereunder. Throughout the following tables the figures for Tasmania refer to the Trustee Savings Banks in Hobart and Launceston. Although the accounts of these institutions are made up for half-yearly periods ending 28th February and 31st August, the managements have furnished particulars of deposits as at 30th June.

STATE SAVINGS BANKS : PARTICULARS.
(£'000.)

State.	Amount on Deposit at 30th June, 1947.	1947-48.			1948-49.		
		Excess of Deposits over Withdrawals during year.	Interest added during year.	Amount on Deposit at end of year.	Excess of Deposits over Withdrawals during year.	Interest added during year.	Amount on Deposit at end of year.

(a) Year ended 31st August, 1949. See par. 8 (i).

In 1947-48 total receipts were £6,501,000 and expenditure, £6,022,000. Net profits amounted to £479,000.

9. *Classification of Depositors' Balances.*—The classification of deposits published by savings banks does not permit a fully detailed analysis with respect to Australia as a whole, but information supplied to the Royal Commission on Monetary and Banking Systems for all savings banks except the Hobart Trustee Savings Bank shows that at 30th June, 1936 the amount on deposit in accounts with balances of less than £100 represented 21 per cent. of the total deposits; balances of over £100 but under £250, 21 per cent.; over £250 but under £500, 23 per cent.; over £500 but under £1,000, 25 per cent.; while those of over £1,000 accounted for 10 per cent. School, penny bank and small inoperative accounts were excluded in determining these percentages.

A similar classification as at 30th June, 1936, 1939 and 1945 to 1949, but relating only to the combined State Savings Banks of Victoria and South Australia, is shown below.

STATE SAVINGS BANKS : CLASSIFICATION OF DEPOSITS.

(Per cent.)

At 30th June—	£100 and Under.	£101-£300.	£301-£500.	Total under £501.	£501-£1,000.	Over £1,000.

				1949	2	1

(a) Rates on ordinary accounts. On Friendly and other Society Accounts the rates at 30th June, 1949 were 2 per cent. on first £2,000 and 1 per cent. on the balance. (b) Up to 1941 the interest-bearing limit in all States except Queensland was £1,300. In Queensland it was £2,000. The limit since 1942 has been £1,000 in all States.

C. COMPANIES.

NOTE.—Statistics available in regard to registered companies relate to (a) Trustees, Executors and Agency Companies; (b) Registered Building and Investment Societies; and (c) Registered Co-operative Societies.

§ 1. Trustees, Executors and Agency Companies.

The following table shows, for the years 1939 and 1944 to 1948, particulars of the assets and liabilities of certain trustee companies transacting business in Australia and New Zealand. Figures for the year 1939 were obtained from returns supplied to the Commonwealth Bureau of Census and Statistics, while those for the years 1944 to 1948 have been extracted from a summary of the last published balance-sheets as shown in the *Australasian Insurance and Banking Record*. Individual items are therefore not entirely comparable. Details of assets of trust funds administered are shown for the year 1939, but for the years 1944 to 1948 totals for nine only of the 23 offices are available.

(a) Not available.

§ 3. Co-operative Societies.

1. **General.**—Returns relating to co-operative societies are divided into three classes—(i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements; and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as Producers' Co-operative Societies and the second as Consumers' Co-operative Societies. The particulars given for New South Wales relate to societies registered under the Co-operation Act 1923-1945. A summary of the business of co-operative societies for the year 1948 for all States except Western Australia is given in the following table. For Western Australia details of the business during 1940-41 (the latest year available) are given.

Dividends on Share Capital ..	£ ..	3,442	2,288	3,292	4,400	..

(a) Particulars relate to societies registered under the Co-operation Act 1923-1945. Particulars shown under Producers' Societies refer to Rural Societies, and under Consumers' to Trading Societies.
 (b) Not available. (c) Increase is due to change in method of calculating bonuses of co-operative wineries. Purchases have been calculated by applying average price paid by non-co-operative wineries to tonnage of fruit delivered. Surplus of sales (less other expenditure) over this has been treated as bonuses and rebates.

2. **Liabilities and Assets.**—The next table shows the liabilities and assets for the same years for which information is available :—

(a) Particulars relate to societies registered under the Co-operation Act 1923-1945. Particulars shown under Producers' Societies refer to Rural Societies and under Consumers' to Trading Societies.

(b) Not available.

D. INSURANCE.

§ 1. Insurance—General.

1. **Legislation.**—Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate in regard to “insurance other than State insurance; also State insurance extending beyond the limits of the State concerned”. Legislation by the Commonwealth Parliament includes the Life Assurance Companies Act 1905 limiting the amount of assurance payable on the death of children, the Marine Insurance Act 1900 defining the limits of marine insurance and regulating the terms of contracts, etc., the Insurance Act 1932–1937, requiring the lodgment of deposits by insurance companies, and the Life Insurance Act 1945, generally regulating life insurance business in Australia. The Life Assurance Companies Act 1905 was repealed by the Life Insurance Act 1945 which incorporated the provisions of that Act. These laws have limited application, and, except for life insurance business which is regulated by the Life Insurance Act 1945, insurance business is conducted under State laws.

2. **Insurance Act 1932–1937**—Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to deposit money or approved securities with the Commonwealth Treasurer to the extent specified in the schedule.

Money deposited is invested by the Treasurer in prescribed securities according to the selection of the depositor, and all interest accruing on deposits or securities is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies.

After this Act became law, State laws governing insurance deposits ceased to operate. Deposits held by States on 1st February, 1932, could, however, remain with the States subject to the conditions embodied in the laws of the States. Whilst deposits so remained with the State, the depositors, to the extent of the value of their deposits, were exempt from liability to make deposits under the Commonwealth Act, and the conditions of State laws continued to apply to the deposits until the Commonwealth Treasurer required their return to depositors who immediately had to make deposits of the prescribed amount with the Commonwealth Government.

The following are not regarded as insurance businesses under the Act :—

Staff superannuation schemes; schemes of religious organizations solely for insurance of their property; and Friendly Society, Union and Association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned, and under the Life Insurance Act 1945 ceased to apply to life insurance business.

The following statement shows particulars of deposits under the Insurance Act 1932–1937 and Life Insurance Act 1945 at 30th June, 1949 :—

DEPOSITS UNDER INSURANCE ACTS, 30th JUNE, 1949.

(£.)

Class of Insurance.	Deposited with Government of—		Total.
	Commonwealth.	States.	
Life	1,105,561	..	1,105,561

Total	2,833,977	1,459,970	4,293,947

The deposits comprise cash £496,750, government, municipal and other securities £3,241,547, fixed deposits £4,000, bank guarantees and undertakings £237,000, titles and mortgages £314,650.

3. **Life Insurance Act 1945.**—In his speech on the introduction of the Bill for the Life Insurance Act 1945 the Treasurer stated that the objects of the legislation were as follows:—(a) To replace all State legislation on the subject of life insurance and to provide a uniform basis for applying the requirements of those Acts to the whole of Australia; (b) to incorporate existing Commonwealth Acts with minor amendments; (c) to appoint an Insurance Commissioner who shall exercise active supervision of the activities of life insurance companies, with a view to securing the greatest possible protection for policy owners; (d) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency.

In addition, it was proposed to provide for the establishment of a Commonwealth Government Insurance Office, if and when the establishment of such an office was thought to be in the public interest.

The Act was assented to on 16th August, 1945, and came into operation on 20th June, 1946. A summary of the provisions of the Act is given in Official Year Book No. 37 (pages 595 to 597).

§ 2. Life Assurance.

1. **General.**—Statistical returns have been collected from life assurance institutions since 1907. Until 1946 these returns were collected under the Census and Statistics Act. From 1947 returns lodged under the Life Insurance Act 1945 have been used to compile life assurance statistics. This change in method of collection has resulted in some slight changes in definition and, as a result, the statistics for 1947 and 1948 are not in all cases strictly comparable with those for earlier years. In earlier years statistics of revenue and expenditure and of assets and liabilities, although generally related only to the life assurance business of the offices making the returns, also included, in some cases, a small amount of other classes of business. Under the Life Insurance Act 1945 companies transacting life assurance business were required to set up separate statutory funds for their life assurance business. As a result of this, it has been possible to separate life assurance business from other classes of business. Except where otherwise indicated, the figures in the succeeding paragraphs refer to Australian business only.

2. **Offices Transacting Business.**—The number of offices transacting life assurance business in Australia during 1948 was 23, including two overseas companies. Of the twenty-one Australian offices, six are purely mutual, including one which transacts general business in respect of which share capital is used, thirteen are public companies, and two are State Government institutions. Of the total offices, thirteen transacted both ordinary and industrial business, one industrial business only. Ordinary and industrial business has, where possible, been kept separate.

3. **Australian Business—Policies in Existence.**—(i) *Ordinary.* In the following table details of ordinary policies on the registers in each State and the Australian Capital Territory are given for the year 1948:—

ORDINARY LIFE ASSURANCE : AUSTRALIAN BUSINESS—POLICIES IN EXISTENCE, 1948.

1948 ..	6,409	587	I	2,058	41	1,859	10,955

(a) Includes other expenses of management, licence fees and taxes, etc.

8. *Liabilities and Assets.*—(i) *General.* The liabilities of the Australian offices consist mainly of their assurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian offices. A number of the larger Australian offices have extensive business overseas and separate details of liabilities and assets in respect of Australian business are not available for years after 1941. For 1941 and earlier years see Official Year Book No. 37 and previous issues.

(ii) *Total Liabilities and Assets.* In the two tables which follow the details of liabilities and assets relate to all business (Australian and overseas) of Australian companies, the life assurance business of the two State Government offices, all business of the Provident Life Assurance Co. Ltd. (incorporated in New Zealand) and the Australian business only of the Prudential Assurance Co. Ltd. (incorporated in England). For various reasons several offices do not attempt the dissection of liabilities and assets between the industrial and ordinary branches, and, therefore, the figures in the following tables relate to the ordinary and industrial branches combined. Details of the total liabilities of life assurance offices for the year 1948 are given in the following table:—

ORDINARY AND INDUSTRIAL LIFE ASSURANCE: TOTAL LIABILITIES, 1948.
(£'000.)

Item.	Life Assurance Business.	Other Classes of Business.	Total Liabilities.

(a) Life assurance and other classes of business, available separately; included with other assets.
(e) Includes goodwill and other intangible assets.

(b) Assets held in Australia. (c) Not
(d) Included with other investments.

§ 3. Fire, Marine and General Insurance.

1. *Australasian Companies.*—The statistical information in this paragraph has been extracted from the *Australasian Insurance and Banking Record*. The following table shows, for the years 1938-39 and 1943-44 to 1947-48, particulars of the revenue and expenditure of a group of insurance companies having their head offices either in Australia, New Zealand or Fiji.

FIRE, MARINE AND GENERAL INSURANCE COMPANIES : SUMMARY OF REVENUE AND EXPENDITURE.

Particulars.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
No. of companies	40	42	42	43	43	43
	£'000.	£'000.	£'000.	£'000.	£'000.	£'000.
Premiums, less reinsurances	9,708	12,576	12,337	13,246	15,472	19,363
Losses	5,417	6,283	6,153	7,031	8,056	10,437
Expenses, commission and taxes	2,994	4,500	4,526	4,633	4,928	5,720
Trade surplus	1,297	1,793	1,658	1,582	2,488	3,206
Interest, rent, etc.	1,011	914	996	1,108	1,141	1,181
Total surplus	2,308	2,707	2,654	2,690	3,629	4,387
Dividends and bonuses paid	709	799	1,287	1,036	1,102	1,248

2. *Aggregate Australian Business.*—(i) *General.* While the foregoing statements relate only to those companies whose head offices are located in Australia, New Zealand or Fiji, the following particulars, which are somewhat restricted in the range of information, are in respect of all companies operating in Australia. The statistics in this paragraph conform substantially to the following definitions and should be interpreted in accordance therewith.

(a) Premiums represent the full amount receivable in respect of policies issued and renewed in the year, less returns, rebates and bonuses paid or credited to policy-holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from "earned premium income" appropriate to the year. When business is increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than "earned premium income" appropriate to the year. The converse applies when business is declining.

(b) Claims or losses include provision for outstanding claims and represent claims or losses incurred in the year. Salvage and other amounts recoverable have been deducted.

(c) Contributions to Fire Brigades, Commission and Agents' Charges, and Expenses of Management represent mainly charges paid during the year.

(d) Taxation represents mainly payments made during the year, and includes income tax, pay-roll tax, licence fees, stamp duty (where paid by the company), etc. Income tax paid during the year is based on the income of earlier years.

The tables contain selected items of statistics and the information shown is not suitable for the construction of a "profit and loss" statement or "revenue" account.

In cases where the business is underwritten in one State and the risk is situated in another the business is included in the State in which the policy was issued.

During 1948-49 (1947-48 in brackets) revenue from premiums amounted to £38,882,000 (£31,270,000) and from the net interest on investments, etc., to £1,469,000 (£1,281,000), totalling £40,351,000 (£32,551,000). Expenditure on losses amounted to £18,898,000 (£16,353,000), contributions to Fire Brigades £820,000 (£755,000), commission and agents' charges £4,048,000 (£3,319,000), expenses of management £6,597,000 (£5,643,000) and taxation £1,601,000 (£1,471,000), a total of £31,964,000 (£27,541,000).

(ii) *States.* The following table shows, for each State, the aggregate premium income less reinsurances and returns, and claims paid less reinsurances, for all classes of insurance other than life for the years 1938-39 and 1944-45 to 1948-49.

FIRE, MARINE AND GENERAL INSURANCE : PREMIUMS AND LOSSES.
(£'000.)

State.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.

Marine(b)	1,018	1,811	1,637	2,367	3,026	3,635
Personal Accident	554	(c)	(c)	(c)	(c)	1,012
All Other	1,472	2,867	3,344	3,973	5,440	5,342
Total	16,850	19,463	20,357	24,406	31,270	38,882

GROSS CLAIMS OR LOSSES, LESS AMOUNTS RECOVERABLE.

Fire	2,223	2,385	1,730	2,101	2,414	2,951
Workers' Compensation(a) ..	2,972	3,400	3,695	4,799	5,751	5,920
Motor Vehicle—						
Compulsory Third Party ..	2,324	450	693	1,060	1,493	2,014
Other		887	1,196	1,954	2,619	3,528
Marine(b)	243	804	407	638	1,145	1,248
Personal Accident	264	(c)	(c)	(c)	(c)	349
All Other	503	880	1,074	1,210	2,931	2,888
Total	8,529	8,806	8,795	11,762	16,353	18,898

(a) From 1944-45 excludes Workmen's Compensation Insurance in coal-mining industry in New South Wales. (b) Excludes business of Commonwealth Marine War Risks Insurance Board. (c) Included with All Other.

The volume of business measured by the amount of premium income shows that fire insurance represented about 29.0 per cent. of the total business during 1947-48 and 27.6 per cent. during 1948-49, while next in importance were workers' compensation 25.8 per cent. during 1947-48 and 25.9 per cent. during 1948-49, and motor vehicles (including compulsory third party insurance) 18.1 per cent. in 1947-48 and 20.8 per cent. in 1948-49. Marine insurance constituted 9.7 per cent. in 1947-48 and 9.3 per cent. in 1948-49.

3. *Commonwealth Marine War Risks Insurance Board.*—The statistics given in the two preceding paragraphs exclude the transactions of the Commonwealth Marine War Risks Insurance Board. For information relating to the operations of the Board see Official Year Book No. 37, page 604. Transactions of the Board for the years 1940-41 to 1948-49 are shown in the following table.

COMMONWEALTH MARINE WAR RISKS INSURANCE BOARD : SUMMARY OF TRANSACTIONS.

(£.)

Year.	Expenditure.			
	Net Premiums Received.	Claims Paid.	Other Expenses.	Total.
1940-41	154,853	..	15	15
1941-42	443,820	80,103	632	80,735

1948-49	75	5,207	255	5,462

E. FRIENDLY SOCIETIES.

1. **General.**—Friendly societies are an important factor in the social life of the community, as probably more than one-third of the total population of Australia comes either directly or indirectly under their influence. Their total membership is over 630,000, but, as certain benefits, such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward to the Registrar annual returns as to their membership and their finances, and reports are published in most of the States dealing with the returns received.

2. **Number of Societies, Lodges and Members.**—The number of different societies and lodges, the total number of benefit members at the end of the year 1947-48 and their average number during the year are shown in the following table :—

FRIENDLY SOCIETIES : SOCIETIES, LODGES AND MEMBERS, 1947-48.

State.	Registered Friendly Societies.	Branches.	Benefit Members at End of Year.	Average Benefit Members during the Year.
New South Wales (a)	32	2,313	228,961	230,403
Victoria (b)	112	1,403	205,433	205,694
Queensland	25	558	70,459	71,175
South Australia (c)	17	(d) 867	78,246	79,937
Western Australia (c)	13	324	30,527	30,912
Tasmania (e)	20	174	22,657	(f) 22,924
Total	5,699	636,283	640,145

(a) Includes branches in the Australian Capital Territory ; excludes twenty-two miscellaneous societies consisting of Medical Institutes, Dispensaries and Burial Societies. (b) Excludes Dispensaries, Juvenile branches and members contributing to medical benefits only. (c) Excludes Juvenile branches. (d) Societies containing male and female branches counted as two branches. (e) Year 1948. (f) Estimated.

3. **Sickness and Death Returns.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shows the total number of members who received sick pay during the year, the number of weeks in the aggregate for which they received pay, and the average per member sick, and, further, the number of benefit members who died during the year, together with the proportion of deaths per thousand average members :—

FRIENDLY SOCIETIES : SICKNESS AND DEATH RETURNS, 1947-48.

State.	Members who received Sick Pay.	Total Weeks Sick Pay Granted.	Average Weeks per Member Sick.	Benefit Members (a)	
				Deaths.	Proportion of deaths per 1,000 (Average).
New South Wales ..	(b)	(b)	(b)	2,776	12.05

(a) Included in administration.

(b) Year 1948.

5. Funds.—The funds of friendly societies in each State at the end of the year 1947-48 were:—New South Wales, £6,337,000; Victoria, £7,870,000; Queensland, £2,471,000; South Australia, £3,716,000; Western Australia, £901,000; Tasmania, £607,000; total, £21,902,000.

F. PROBATES AND LETTERS OF ADMINISTRATION.

The following particulars give some idea of the number and value of estates of deceased persons in each State for the latest year for which information is available. Owing to differences in legislation in the various States the figures are not entirely comparable.

(a) Total estates of deceased persons assessed for death duty. (b) Estates dealt with by Taxation Department.
(c) Not available. (d) Not available separately.

CHAPTER XVII.

PUBLIC FINANCE.

NOTE.—The subject of “Public Finance” is dealt with in this Chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand a combination of these two divisions under the heading of Commonwealth and State Finance. Under the Financial Agreement the Commonwealth assumed the liability to bondholders for the States’ Debts existing at the date of the agreement and now arranges for all borrowings for and on behalf of the Commonwealth or any State and for all conversions, renewals, redemptions and consolidations of the Public Debts of the Commonwealth and the States. In earlier issues of the Official Year Book information relating to the Public Debt of the Commonwealth and the States was given in each of the divisions referred to above. In this issue, however, it is dealt with in a separate division which incorporates the sections previously included in the other divisions.

In view of their importance a separate division relating to taxes on income is included.

A. COMMONWEALTH FINANCE.

§ 1. General.

1. Financial Provisions of the Constitution.—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (*see* pages 20–23 of this issue). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer to the Commonwealth from the States of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Section 87 deals with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Official Year Book and on pages 785–8 of this issue a *résumé* is given of the constitutional obligations upon the Commonwealth regarding payments to the States.

The majority of the tables relating to Commonwealth Finance have been compiled from the annual Budget Papers as presented to Parliament by the Treasurer of the Commonwealth.

2. Accounts of Commonwealth Government.—The Commonwealth Government, like the State Governments, bases its accounts upon three funds, the Consolidated Revenue Fund, the Trust Fund and the Loan Fund, the last-mentioned fund coming into existence in the financial year 1911–12.

§ 2. Consolidated Revenue Fund.

Division I.—Nature of Fund.

1. Provisions of the Constitution.—The provisions made for the formation of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on the fund, are contained in Sections 81 to 83 of the Constitution (*see* page 20 of this issue).

2. Annual Results of Transactions.—The following statement shows, for the period 1929-30 to 1948-49, the receipts, expenditure and excess receipts or deficiency for each year, together with the accumulated result and the payments made from the excess receipts.

The receipts and expenditure on account of the balance of interest on States' Debts payable by the States to the Commonwealth under the Financial Agreement have been excluded.

COMMONWEALTH CONSOLIDATED REVENUE : RECEIPTS, EXPENDITURE, ETC.
(£.)

1947-48 ..	465,905,122	464,484,602	1,420,430	1,420,430	..
1948-49 ..	554,377,372	554,377,372	1,420,430

(a) Met by temporary advance from loan fund.

(b) Deficiency funded from Loan Fund.

3. Payments from Excess Receipts.—Particulars of the excess receipts, accumulated balances and allocation of excess receipts since 1938-39 are shown in the following table :—

COMMONWEALTH CONSOLIDATED REVENUE : EXCESS RECEIPTS.
(£.)

Particulars.	1938-39.	1939-40.	1940-41.	1947-48.	1948-49.
Accumulated balance ..	3,494,733	627,309	2,928,375	..	1,420,430
Excess receipts ..	627,309	2,928,375	..	1,420,430	..
Total for year ..	4,122,042	3,555,684	2,928,375	1,420,430	1,420,430
Expenditure from excess receipts—					
Defence equipment ..	3,494,733	627,309	2,928,375
Reserve for payment of War Gratuity	1,420,430
Total ..	3,494,733	627,309	2,928,375	..	1,420,430
Accumulated balance ..	627,309	2,928,375	..	1,420,430	..

The Consolidated Revenue Fund for the financial years 1940-41 to 1946-47 and 1948-49 was exactly balanced, as all available revenue after charging expenditure on ordinary services was used for war and repatriation purposes.

Division II.—Revenue.

1. **General.**—The following table furnishes details of the revenue from each source and the amount per head of population under each of the main headings during the years 1938-39 and 1944-45 to 1948-49 :—

COMMONWEALTH CONSOLIDATED REVENUE : SOURCES.

(£.)

Source.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

(iv) *Other Taxation.* (a) *General.* Taxes other than Customs and Excise are, in general, assessed and collected by the Commissioner of Taxation. The organization comprises an office in each State assessing the returns of taxpayers whose interests are restricted to that State only, and a Central Office assessing taxpayers whose interests are in more than one State. Taxes, however, may be paid to any office, so that the sums actually received by any office do not correspond to the assessments made by that office and frequently differ by very large amounts. For example, therefore, the actual receipts of income tax by the Queensland State office may include tax in respect of Central Office or New South Wales assessments, and, therefore, may not be a proper measure of income tax paid on account of income derived in Queensland.

The actual receipts by the various offices are the figures of necessity used by the Treasury for accounting purposes, and may be called the "Treasury" figures. In order to show a more significant picture of the taxation in each State, figures furnished by the Commissioner of Taxation, which refer strictly to the assessments made by the State office concerned, are used in the following tables. The totals of these figures do not quite agree with the total Treasury figures shown on page 760, owing to certain technicalities of accounting. The Taxation Office figures present a fair comparison between States, e.g., in taxation paid per head, but do not give the absolute measure of taxation, because the Central Office collections, which include taxation on account of all States, have not been allocated to the States. In the absence of precise information, it may be assumed, as a rough approximation, that Central Office collections may be divided among States in proportion to State office collections. It is probable, however, that a somewhat larger share is derived from the more populous States, New South Wales and Victoria.

(b) *Land Tax.* Commonwealth Land Tax was first imposed on the unimproved value of land in 1910-11. The following table shows the rates of Land Tax imposed for each assessment year from 1940-41 to 1949-50:—

LAND TAX : RATE OF TAX PER £1 OF TAXABLE VALUE.

(T = Taxable Value.)

(Pence.)

Assessment Year.	Residents.			Absentees.(a)					
	If the Taxable Value is from £1 to £75,000—	If the Taxable Value is over £75,000—		If the Taxable Value is from £1 to £80,000—		If the Taxable Value is over £80,000—			
		On £75,000—	On excess over £75,000—	On first £5,000—	On excess over £5,000—	On £5,000—	On next £75,000—	On excess over £80,000—	
1940-41 to 1949-50 (b)	$\left(1 + \frac{T}{18,750}\right)$	5.0	9.0	1.0	$\left(2 + \frac{T-5,000}{18,750}\right)$	1.0	6.0	10.0	

(a) Absentees are not allowed an exemption of £5,000 granted to residents.

(b) In addition, if the taxable value exceeds £20,000, there is payable for 1941-42 and subsequent years a super tax equal to the lesser amount of the following:—(i) twenty per cent. of the amount of land tax; or (ii) one per cent. of the amount by which the taxable value of the land exceeds £20,000.

Under the National Security (Values for Land Tax) Regulations the revaluations of land for the purposes of the Land Tax Assessment Act 1910-1940 were postponed until after the war. Thereby the values of land, or of interests in land, as assessed for the financial year 1939-40, were adopted for the financial year 1940-41 and subsequent years for the duration of the war. Under section 10 of the Defence (Transitional Provisions) Act 1946-1949 the provisions of the National Security (Values for Land Tax) Regulations were incorporated in the Land Tax Assessment Act 1910-1949 and revaluations of land for purposes of the Act were postponed until after the assessment year commencing on 1st July, 1950.

Land Tax receipts in each State and Central Office for the years 1938-39 and 1944-45 to 1948-49 were as follows. The receipts referred to in this table differ slightly from the collections shown on page 760 because some refunds credited before 30th June were not paid until after that date.

LAND TAX RECEIPTS.

(c) *Estate Duty.* The Commonwealth Estate Duty was first levied in 1914. Particulars of exemptions and the rates imposed prior to 1940 are given in earlier issues of the Year Book (*see* No. 37, page 614).

Estate Duty, under the Estate Duty Assessment Act 1940, is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula :—(a) where the whole of the estate passes to the widow, children or grand-children of the deceased, the sum of £2,000 decreasing by £1 for every £10 by which the value exceeds £2,000 up to £10,000, and thereafter decreasing by £1 for every £2 by which the value exceeds £10,000; (b) where no part of the estate passes to the widow, children or grand-children, the sum of £1,000 decreasing by £1 for every £10 by which the value exceeds £1,000 up to £6,000, and thereafter decreasing by £1 for every £8 by which the value exceeds £6,000; and (c) where part only of the estate passes to the widow, children or grand-children, the statutory exemption is to be calculated proportionately under (a) and (b).

The rates of duty, which increase as the value of the estate increases are :—£1 to £10,000, 3 per cent.; £10,001 to £20,000, 3 per cent. to 6 per cent.; £20,001 to £120,000, 6 per cent. to 26 per cent.; £120,001 to £500,000, 26 per cent. to 27.9 per cent.; over £500,000 27.9 per cent.

Particulars of the collections in each State and Central Office for the years 1938-39 and 1944-45 to 1948-49 are shown in the following table. These figures differ slightly from the figures on page 760 as some refunds were credited before 30th June and not paid until after that date.

Average duty per estate .. £	207	341	409	385	404	397

(d) *Gift Duty.* The Gift Duty Assessment Act 1941-1947 and the Gift Duty Act 1941-1947 impose a gift duty on all gifts made after the 29th October, 1941. A gift has been defined as any disposition of property, which is made otherwise than by will, without adequate consideration in money or money's worth.

There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty.

The following rates of duty have been fixed by the Gift Duty Act 1941-1947 :—

Value of all Gifts made within Eighteen Months.	Rate of Duty.
Not exceeding £2,000 (a) ..	Nil
£2,001 (a) to £10,000 ..	3%
£10,001 to £20,000 ..	3% to 6%
£20,001 to £120,000 ..	6% to 26%
£120,001 to £500,000 ..	26% to 27.9%
£500,001 and over ..	27.9%

(a) Prior to 3rd June, 1947, no duty was payable if the value of all gifts as defined above did not exceed £500. If the value of all gifts exceeded £500 but did not exceed £10,000 the rate of duty was 3 per cent

An amendment which operated from 3rd June, 1947 provided that gift duty will not exceed one half of the amount by which the value of the gift exceeds £2,000.

The receipts from gift duty in each State for the years 1944-45 to 1948-49 are shown in the following table. The figures shown in the table differ from those shown on page 760 because certain refunds credited before 30th June were not paid until after that date.

(e) *Income Taxes.* Details of taxes on income are given in Section "E" of this Chapter.

(f) *Pay-roll Tax.* The Pay-roll Tax Assessment Act 1941-42 and the Pay-roll Tax Act 1941 imposed a pay-roll tax of 2½ per cent. on all wages in excess of £20 per week paid by an employer after 30th June, 1941. These measures formed part of the Commonwealth scheme of child endowment, the revenue from the tax being designed to provide the main part of the money required.

Pay-roll tax is collected in a similar manner to sales tax. Employers are required to register and to furnish a monthly return of all wages paid.

The following table shows the receipts from pay-roll tax in each State for the years 1944-45 to 1948-49. The figures shown vary slightly from the collections shown on page 760 because some refunds which were credited before 30th June were not paid until after that date.

(g) *Gold Tax.* The Gold Tax Collection Act 1939-1940 and the Gold Tax Act 1939 imposed a tax on all gold delivered to the Commonwealth Bank of Australia or to an agent of that Bank, on and after 15th September, 1939, of 50 per cent. of the amount by which the price payable by the Bank for each fine ounce of gold delivered exceeded £9. This tax was suspended from 20th September, 1947, by the Gold Tax Suspension Act 1947. The amounts of tax collected during the five years 1944-45 to 1948-49 were as follows :—1944-45, £342,457; 1945-46, £383,552; 1946-47, £556,435; 1947-48, £10,713; and 1948-49, Dr. £4,605.

(h) *Entertainments Tax.* The Entertainments Tax Assessment Act 1942-1946 and Entertainments Tax Act 1942-1949 came into force on 1st October, 1942, following the agreement of the State Governments to the request of the Commonwealth to suspend their entertainments tax legislation for the duration of the war and one year after. This enabled the Commonwealth Government to re-enter this field of taxation. Until 1945-46 the Commonwealth recompensed the States by annual payments of £765,787, an amount equal to that collected by the States during the year 1941-42. Thereafter these payments were discontinued and the agreement that the States should not levy a tax on entertainments was terminated.

The rates of entertainments tax from 1st October, 1949 are shown in the following table. Details of rates operating prior to 1st October, 1949 are given in earlier issues of the Official Year Book (*see* No. 37, page 617).

RATES OF ENTERTAINMENTS TAX OPERATING FROM 1st OCTOBER, 1949.

Amount paid for Admission (excluding amount of Tax).			Reduced Rates.		Full Rates.

			1s. 5d. plus 1½d. for each 6d. (or part thereof) by which the payment for admission exceeds 6s. 6d. (a)		1s. 10d. plus 2½d. for each 6d. (or part thereof) by which the payment for admission exceeds 6s. 6d. (a)	

(a) Fractions of a penny in the amount of tax are treated as follows :—½d. and ¼d. are disregarded—½d. is taken as one penny.

The reduced rates of tax apply to entertainments which consist of one or more of the following items, viz. :—a stage play, a ballet, a performance of music, a lecture, a recitation, a music hall or other variety entertainment, or a circus or travelling show, and to entertainments which consist solely of a game or sport in which human beings are the sole participants and the entertainment is conducted by a society which is not established or carried on for profit. The full rates apply to all other forms of entertainment. Entertainments tax is not charged on admissions to entertainments the proceeds of which are devoted to public, patriotic, philanthropic, religious or charitable purposes or where the entertainment is of an educational or scientific character.

Entertainments tax received during the five years 1944-45 to 1948-49 is shown in the following table. The figures shown in the table differ from those shown on page 760 because certain refunds credited before 30th June were not paid until after that date.

There were 7,556,000 admissions at the reduced rate, and 157,226,000 at the full rate.

(i) *Sales Tax.* The sales tax was first imposed in August, 1930. The operation of the tax is controlled chiefly by a system of registration of taxpayers whereby all manufacturers and wholesale merchants, who are the taxpayers under the Act in respect of goods sold in Australia, must be registered with the Department. The tax on imports subject to sales tax is collected by the Customs Department at ports of entry.

Since the inception of the tax certain exemptions have been allowed. These exemptions, which have been extended from time to time, relate mainly to goods of an essential nature or for use in primary production. The most recent exemptions were those granted from 9th September, 1948, and 8th September, 1949. The existing rates

of Sales Tax are $8\frac{1}{2}$ per cent. (general rate) and 25 per cent. effective from 8th September, 1949. For particulars of rates applicable since the inception of Sales Tax in August, 1930 see Official Year Book No. 37, page 617.

Particulars of the net amount of sales tax payable, and the sales of taxable, non-taxable and exempt goods in each State for 1948-49 are given in the following table. The figures for "Tax Collected" are in respect of the periods 1st July to 30th June of each year, adjusted on account of rebates of tax allowed as deductions in returns of taxpayers, while those relating to sales are in respect of the periods 1st June to 31st May.

SALES TAX AND AMOUNT OF SALES, 1948-49. (£'000.)

State, etc.	Gross Taxable Sales.	Non-Taxable Sales.	Sales of Exempt Goods by Registered Persons.	Net Amount of Sales on which Sales Tax was payable.	Tax Collected.

Similar details for Australia as a whole for the years 1938-39 and 1944-45 to 1948-49 are given in the following table :—

SALES TAX AND AMOUNT OF SALES. (£'000.)

Year.	Gross Taxable Sales.	Non-Taxable Sales.	Sales of Exempt Goods by Registered Persons.	Net Amount of Sales on which Sales Tax was payable.	Tax Collected.		
					Taxation Department.	Customs Department.	Total.
1938-39 ..	197,809	171,810	280,282	183,296	8,559	758	9,317
1944-45 ..	235,117	351,197	389,088	218,202	28,803	884	29,687
1945-46 ..	268,773	341,759	383,151	248,679	32,559	1,152	33,711
1946-47 ..	295,822	416,469	472,854	277,003	34,642	1,739	36,381
1947-48 ..	315,013	469,805	623,101	292,387	32,457	2,429	34,886
1948-49 ..	373,799	526,941	727,393	348,572	36,722	2,373	39,095

In the foregoing tables exempt sales relate to goods exempted from sales tax under the Sales Tax (Exemptions and Classifications) Act 1935-1949, while non-taxable sales relate to goods on which tax is not payable at the time of sale. In this latter case the sale has been made to a registered taxpayer who has quoted his certificate. These sales, however, become taxable before passing into consumption, unless used for a purpose exempted under the Act.

The figures given in the foregoing tables do not represent the total sales of all commodities, as vendors trading in exempt goods only are not required to be registered and consequently the volume of their sales is not included in the statistics above.

(j) *Flour Tax.* Particulars of the rates of flour tax which operated from 4th December, 1933 to 21st December, 1947 are given in Official Year Book No. 37, pages 618 and 619. Because of the rise in wheat prices the rate was declared to be nil as from 22nd December, 1947.

Net receipts after allowing for refunds and tax outstanding are shown in the following table for the years 1938-39 and 1944-45 to 1948-49. The figures vary slightly from the collections shown on page 760 because some refunds were credited before 30th June, but not paid until after that date.

NOTE.—Minus sign (—) indicates an excess of refunds.

(k) *Wool Levy.* The Wool Tax Act 1936 and Wool Tax Assessment Act 1936 provided for a levy on all wool grown in Australia and shorn on or after 1st July, 1936. The levy is collected through wool-brokers and dealers who furnish quarterly returns on which the levy is assessed. On wool, not previously taxed in the hands of a broker or dealer, the levy is payable prior to export. The rates fixed by the Wool Tax Act 1936 were: 6d. per bale; 3d. per fadge or butt; and 1d. per bag. By the Wool Tax Act 1945 these rates were increased from 1st June, 1945 to 2s. per bale; 1s. per fadge or butt; and 4d. per bag. Proceeds are devoted to publicity and research in connexion with the wool industry. This levy has been suspended for any period during which the Wool (Contributory Charge) Act 1945 is in operation. The Wool Contributory Charge was levied from 1st July, 1946 and only arrears of wool levy have been collected since that date. The amounts collected from wool levy during the years 1938-39 and 1944-45 to 1948-49 were as follows:—

WOOL LEVY RECEIPTS.

(l) *Wool Contributory Charge.* The Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 imposed a charge on all wool produced in Australia and sold, manufactured or exported after a date fixed by proclamation.

Wool sold by the Australian Wool Realization Commission is not liable to the charge. The rate of the charge is to be such a percentage of the sale value of the wool as is necessary to provide the following amounts:—

- (a) The amounts required to meet the share of the industry in the operating expenses of the Joint Organization for the disposal of wool stocks;
- (b) the amounts required for payment of interest on the amount spent by the Commonwealth in purchase of wool under the disposals plan; and
- (c) the amount of the wool levy.

The Acts came into operation on 1st July, 1946, and the rate fixed was 5 per cent. on the sale value of the wool. From 1st August, 1947 the rate was reduced to 0.75 per cent. Collections in each State during the years 1946-47 to 1948-49 are shown in the following table:—

WOOL CONTRIBUTORY CHARGE RECEIPTS.

(£.)

State.					1946-47.	1947-48.	1948-49.
New South Wales	1,554,997	502,281	315,280

Western Australia	389,879	134,084	99,873
Tasmania	89,727	25,173	19,141
Total	4,497,107	1,423,862	1,029,110

(m) *Wheat Export Charge and Wheat Tax.* The Wheat Export Charge Acts 1946 imposed an export charge on wheat (including the content of wheat products) harvested after 30th September, 1945 and exported from the Commonwealth after 30th November, 1945. These acts did not apply to wheat harvested between 1st October, 1945 and 1st October, 1947 and exported by the Australian Wheat Board, but provision was made in the Wheat Tax Act 1946 to collect an amount equivalent to the charge that would have been collected on this wheat, by imposing a tax on wheat acquired by the Board. There were no collections under the Wheat Export Charge Acts 1946, but collections under the Wheat Tax Act 1946, which came into operation on 9th August, 1946 and imposed a tax on all wheat of the 1945-46 and 1946-47 seasons acquired by the Australian Wheat Board, amounted to £5,500,000 in 1946-47 and £5,729,780 in 1947-48. These amounts were paid to the Wheat Prices Stabilization Fund and, under the Wheat Tax (Refund and Repeal) Act 1948, were refunded to growers. The amount of the refund was £11,548,637 (including interest, £318,857).

The Wheat Export Charge Act 1948, which operated from 25th November, 1948, repealed the Wheat Export Charge Acts 1946 and provided for an export charge on all wheat and wheat products of the 1947-48 and subsequent seasons exported after 25th November, 1948. Subject to a lower rate being prescribed, the rate of charge per bushel of wheat exported by the Australian Wheat Board was fixed at 50 per cent. of the amount by which the average price per bushel of all wheat exported by the Board exceeded the guaranteed price, with a maximum charge of 2s. 2d. per bushel. If the exporter is not the Australian Wheat Board the charge is the same except that there is no maximum charge of 2s. 2d. per bushel.

The guaranteed price for the 1947-48 season was 6s. 3d. per bushel for all fair average quality bulk wheat f.o.r. at the ports of export. It was raised to 6s. 8d. per bushel for the 1948-49 season and to 7s. 1d. for the 1949-50 season. Unless Parliament otherwise provides the act shall not apply to wheat harvested after 30th September, 1953.

Under the Wheat Industry Stabilization Act 1946-48 an amount equivalent to the charges collected under the Wheat Export Charge Act 1948 is paid to the Wheat Prices Stabilization Fund. Out of this fund payments shall be made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price.

Collections of Wheat Export Charge amounted to £18,086,150 in 1948-49.

(n) *Stevedoring Industry Charge.* The Stevedoring Industry Charge Act 1947 and the Stevedoring Industry Charge Assessment Act 1947 imposed a charge of 4½d. per man-hour on the employer of a waterside worker after 22nd December, 1947.

The amounts received are paid to the Stevedoring Industry Board for the payment of attendance money to waterside workers and for other expenses of the Board.

From 11th October, 1949 the charge was reduced to 2½d. per man hour.

Collections in each State during the years 1947-48 and 1948-49 are shown in the following table:—

STEVEDORING INDUSTRY CHARGE RECEIPTS.

Further particulars of the Postmaster-General's Department's receipts to 1947-48 are given in Chapter V. "Transport and Communication" (part I. Posts, Telegraphs, Telephones and Wireless).

(ii) *Commonwealth Railways.* The Commonwealth Government is responsible for four railways—the Trans-Australian, the Central Australia, the North Australia and the Australian Capital Territory. The following table shows the amounts paid to the credit of the Consolidated Revenue Fund on account of each of these railways for the years 1938-39 and 1944-45 to 1948-49 :—

COMMONWEALTH RAILWAY REVENUE.
(£.)

Railway.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.

Total ..	525,910	2,865,835	1,664,400	1,154,517	1,190,160	1,605,596

Further particulars to 1947-48 are given in Chapter V. "Transport and Communication" (part B. Railways).

4. *Other Sources of Revenue.*—Of other sources of revenue, amounting in 1948-49 to £27,913,521, the following are noteworthy; Interest, £1,532,371; Civil Aviation, £1,997,614; Net Profit on Australian Note Issue, £4,459,903; and Surplus balances of Trust accounts, £17,000,000.

Division III.—Expenditure.

1. *Nature of Commonwealth Expenditure.*—The disbursements by the Commonwealth Government of the revenue collected by it fell naturally, under the "book-keeping" system, into three classes, namely :—

- (a) Expenditure on transferred services; (b) expenditure on new services; and (c) payments of surplus revenue to the States.

Of these three, only the first two were actual expenditure, the last being merely a transfer, the actual expenditure being incurred by the States. In accordance with the provisions of the Constitution, the expenditure on transferred services was, under the "book-keeping" system, debited to the several States in respect of which such expenditure was incurred, while the expenditure on new services was distributed *per capita*. Surplus Commonwealth revenue was paid to the States monthly. Until the end of the year 1903-4, new works, etc. for transferred departments were treated as transferred expenditure, and were charged to the States on whose behalf the expenditure had been incurred. In subsequent years all such expenditure was regarded as expenditure on new services, and distributed amongst the States *per capita*. Under the arrangement which superseded the "book-keeping" system, a specific subsidy of 25s. per head of population was made annually by the Commonwealth to the States, and there was no further debiting of expenditure to the several States. The States Grants Act 1927 provided for the abolition of the *per capita* payments as from 30th June, 1927. From 1st July, 1928 the temporary provisions of the agreement between the Commonwealth and the several States under the Financial Agreement Act 1928 were operative, and on 1st July, 1929 the Commonwealth Government took over the debts of the States under this agreement which was ratified by all Governments concerned. For further particulars of Commonwealth payments to States see pages 785-790.

2. *Details of Expenditure from Consolidated Revenue.*—(i) *General.* The following table gives details of the expenditure from Consolidated Revenue during the years 1938-39 and 1944-45 to 1948-49.

* For an exposition of the "book-keeping" system see Official Year Book No. 6, p. 780.

COMMONWEALTH EXPENDITURE FROM CONSOLIDATED REVENUE.

(a) For details, see p. 7, para. 714-6.

(b) Departments of Navy, Army, Air and Supply and Shipping.

(c) Excludes Repatriation Capital Works and Services.

(d) For details, see § 6, page 793.

(e) Includes External Territories.

(f) Includes with Int. r. (i) Included under Defence Services and War (1939-45) and Repatriation Services.

(g) Included with Prime Minister.

(h) For details, see table, page 780.

(i) Excludes Defence Services prior to 1946-47 and War (1939-45) Services.

(j) Excludes Repatriation Capital Works and Services.

(k) Excludes balance of interest payable on States' Debts (recoverable from States).

(l) Income and Entertainment Tax Reimbursements.

(m) Grants were replaced by Tax Reimbursement Grants from 1946-47. See page 786-7.

(n) In addition, the following amounts were provided for assistance to primary producers under War services' expenditure—1944-45, £14,280,284; 1945-46, £19,755,385; 1946-47, £7,719,605; 1947-48, £10,808,117; and 1948-49, £8,248,323.

(o) Assistance to primary producers.

Particulars for each department include interest, sinking fund, superannuation charges, etc., but do not include the expenditure on capital works and services which is given in (iii) page 785 nor that on Defence, War (1939-45) and Repatriation Services which is given in § 7, pages 794-6. Details of expenditure of each department are given in paragraph (ii) below.

(ii) *Total Cost of Departments.* (a) *Introductory.* Under the heading "Total Cost of Departments" are included (i) particulars of expenditure on the estimates of departments in respect of salaries and general expenses, and (ii) particulars of expenditure from special appropriations in respect of salaries of the Governor-General, Ministers, Judges, etc., Government contributions for superannuation, and interest and sinking fund charges, etc., allocated to departments. Expenditure from appropriations for Defence, War (1939-45) and Repatriation Services is not included. For these details see § 7, pages 794-6.

Information on the functions of the several departments and the acts administered by the Ministers of Departments was published in Official Year Book No. 37, pages 76-86, but is not repeated in this issue.

(b) *Governor-General.* Section 30 of the Constitution enacts that, until the Commonwealth Parliament otherwise provides, there shall be payable out of the Consolidated Revenue Fund for the salary of the Governor-General an annual sum of ten thousand pounds, and a proviso is made that the salary of the Governor-General shall not be altered during his continuance in office. The expenditure in connexion with the Governor-General and establishment for the years 1938-39 and 1944-45 to 1948-49 was as follows :—

EXPENDITURE : GOVERNOR-GENERAL AND ESTABLISHMENT.

(£.)

Details.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.
Salary	10,000	10,000	10,000	10,000	10,000	10,000
Government Houses, maintenance, etc. .. .	12,305	18,584	16,530	23,956	24,748	32,219
Governor-General's office (a) .. .	5,381	16,125	3,340	8,365	5,640	5,122
Interest and Sinking Fund .. .	5,079	4,412	4,667	4,082	4,446	4,956
Total	32,765	49,121	34,537	46,603	44,843	52,297

(a) Represents official services outside the Governor-General's personal interests, and carried out mainly at the instance of the Government.

(c) *Parliament.* Under this head have been grouped all the items of expenditure connected with the Commonwealth parliamentary government of Australia for the years 1938-39 and 1944-45 to 1948-49. Although the administration of the Electoral Act and the conduct of elections come within the functions of the Department of the Interior, the expenditure in connexion therewith is fundamentally incurred on account of the parliamentary government system and for that reason is included herein.

EXPENDITURE : COMMONWEALTH PARLIAMENT.

(£.)

In Section 66 of the Constitution provision is made for the payment from Consolidated Revenue of an annual sum for the salaries of Ministers, and Section 48 specifies the amount of the allowance to each Senator and each Member of the House of Representatives. These details, together with subsequent increases, will be found on pages 14 and 18 of this volume, while details of the cost of parliamentary government of the Commonwealth and each State will be found on page 107.

(d) *Prime Minister's Department.* External territories were administered by this department until June, 1941, when the Department of External Territories was created. Particulars of expenditure relating to the administration of external territories for the years 1944-45 to 1948-49 are shown under the heading of that department. The expenditure of the Prime Minister's Department for the years 1938-39 and 1944-45 to 1948-49 is shown in the following table:—

EXPENDITURE : PRIME MINISTER'S DEPARTMENT.

(£.)

(a) Provided under War (1939-45) and Repatriation Services.

(h) *Department of the Interior.* With the formation of the new departments of Works (later expanded to include Housing) in February, 1945, and Immigration in July, 1945, the administration of Commonwealth Public Works and Immigration was transferred to the new departments and costs relating to these activities for the years 1944-45 to 1948-49 are shown elsewhere. The Northern and Australian Capital Territories, which are administered by the Department of the Interior, are for convenience included under Territories, while expenditure in connexion with the Electoral Office, which is administered by the Department of the Interior, is included under Parliament. Commonwealth Railways, whose administration passed to the Department of Shipping and Fuel from the Department of the Interior in March, 1950, are also shown separately—see Railways below.

Particulars of the expenditure for the years 1938-39 and 1944-45 to 1948-49 on other services under the control of this Department are as follows :—

Total	214,832	272,865	279,800	331,965	5,222,124	4,604,662

(a) Provided under Defence and War (1939-45) Services.

(b) Includes Reserves of Stores and Materials, £764,098.

Early in 1950 the Departments of Supply and Development and Shipping and Fuel were abolished, and the three Departments of Fuel, Shipping and Transport, Supply, and National Development were established. The first took over the functions of the former Departments of Shipping and Fuel and of Transport (also abolished), the second the Supply sections of the former Department of Supply and Development, and the third certain administrative functions of the developmental side of that Department and of the former Department of Post-war Reconstruction (also abolished).

(p) *Department of External Territories.* This Department was set up in June, 1941 to administer the Commonwealth External Territories of Papua, New Guinea, Norfolk Island and Nauru. Expenditure of the Department for the years 1944-45 to 1948-49 is shown hereunder. Particulars of expenditure on Territories are given in para. (x) following :—

EXPENDITURE : DEPARTMENT OF EXTERNAL TERRITORIES.

(£.)

Details.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.
Administration — Salaries and general expenses	23,374	32,165	42,338	53,952	73,776

Rent, repair and maintenance of buildings	6,578	6,287	3,747
Total	32,420	72,551	183,219	1,411,007	3,588,938

(r) *Department of Labour and National Service.* This Department was set up during the 1939-45 War for the purpose of mobilizing the nation's man-power and to deal with matters affecting industrial relations, welfare and training, and war housing. The Department's post-war functions relate to industrial matters, vocational training (other than University type) of discharged members of the Forces, the operation of the Commonwealth Employment Service, etc.

Prior to 1946-47, expenditure on this Department was included under Defence, War (1939-45) and Repatriation Services. Expenditure for the years 1946-47 to 1948-49 is shown in the following table :—

EXPENDITURE : DEPARTMENT OF LABOUR AND NATIONAL SERVICE.

(£.)

Details.	1946-47.	1947-48.	1948-49.
Administrative	1,031,651	1,178,557	1,242,624
Superannuation	37	507	684
Rent, repair and maintenance of buildings	95,742	97,676	84,882
Total	1,127,430	1,276,740	1,328,190

(s) *Department of Transport.* This Department was set up in 1941-42 to control, regulate and direct all land transport services for the carriage of goods and passengers, within the Commonwealth. Its post-war functions (until March, 1950) included the administration of the Standardization of Railways Agreement, Commonwealth and Federal Aid Roads, the Australian Transport Advisory Council, etc. The Department was abolished in March, 1950, and its functions, together with the administration of the Commonwealth Railways, were transferred to the Department of Fuel, Shipping and

Transport. Prior to 1946-47 expenditure by this Department was provided under Defence, War (1939-45) and Repatriation Services. Expenditure for the years 1946-47 to 1948-49 is shown in the following table :—

EXPENDITURE : DEPARTMENT OF TRANSPORT.

Total	57,422	69,785	163,729

(t) *Department of Information.* This Department was set up during the 1939-45 War, its functions relating, *inter alia*, to the direction and control of the publication of information on the war, and to publicity censorship. Its post-war function is the dissemination of national publicity. In March, 1950 it was abolished as a separate Department, and transferred to the Department of the Interior as the Australian News and Information Bureau. Expenditure of the Department prior to 1946-47 was provided under Defence, War (1939-45) and Repatriation Services. Expenditure for the years 1946-47 to 1948-49 is shown in the following table :—

EXPENDITURE : DEPARTMENT OF INFORMATION.

(u) *Department of Post-war Reconstruction.* The Department of Post-war Reconstruction was set up during the 1939-45 War to prepare for the conversion from war to peace-time activities. It administered the Commonwealth Reconstruction Training Scheme and the Office of Education. In March, 1950 the Department was abolished, and its functions were distributed to other Departments, including the newly-formed Department of National Development. Expenditure prior to 1946-47 was included under Defence, War (1939-45) and Repatriation Services. Expenditure for the years 1946-47 to 1948-49 is shown in the following table :—

EXPENDITURE : DEPARTMENT OF POST-WAR RECONSTRUCTION.

(a) Includes loans, redemption and conversion expenses, 1946-47 £54,648, 1947-48, £20,274 and 1948-49, £903.

Additional details of the financial operations of the Commonwealth Railways to 1947-48 are given in Chapter V. "Transport and Communication" (part B. Railways).

(2) *Territories.* The following table shows the expenditure on account of territorial services for the years 1938-39 and 1944-45 to 1948-49. The internal territories are administered by the Department of the Interior, and the Department of External Territories controls the external territories. The expenditure has been grouped in one table for convenience. Information in greater detail will be found in the *Finance Bulletin* No. 40, issued by this Bureau.

EXPENDITURE : TERRITORIES.

(a) Excludes Railways, see para. (iv).

(iii) *Capital Works and Services.* The expenditure on capital works and services during the years 1938-39 and 1944-45 to 1948-49 was as follows :—1938-39, £6,565,268 (excluding £3,494,733 provided from excess receipts for Defence equipment); 1944-45, £5,705,351; 1945-46, £6,659,952; 1946-47, £17,180,202; 1947-48, £25,501,587; and 1948-49, £42,639,224. Particulars exclude expenditure in connexion with Defence Services prior to 1946-47 and War (1939-45) and Repatriation Services.

(iv) *Defence, War and Repatriation Services.* Full details concerning the expenditure from Consolidated Revenue upon War (1914-18) and Repatriation Services, and Defence, War (1939-45) and Repatriation Services will be found in §§ 6 and 7, pages 793-6.

Division IV.—Payments to or for the States.

1. *General.*—An outline of the provisions of the Constitution requiring the Commonwealth to make payments to the States, and of the systems which followed, is given in earlier issues of the Official Year Book (see No. 37, pages 633 to 638). In the following paragraphs reference is made to the agreements at present in operation.

2. *Financial Agreement.*—Details of the Financial Agreement between the Commonwealth and the States are given in Official Year Book No. 37, pages 685 to 690. Under this agreement the Commonwealth agreed to contribute £7,584,912 per annum towards interest payable on the State Debts for a period of 58 years from 1st July, 1927. This amount is to be distributed amongst the States as follows :—New South Wales, £2,917,411; Victoria, £2,127,159; Queensland, £1,096,235; South Australia, £703,816; Western Australia, £473,432; Tasmania, £266,859; Total, £7,584,912.

These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926-27 at the rate of 25s. per head of population, the rate at which the Commonwealth had contributed annually to the States since 1st July, 1910 as compensation for the States relinquishing, after Federation, the right to levy Customs and Excise Duties.

In addition, the Commonwealth agreed to pay to the National Debt Sinking Fund for redemption of State Debts the following amounts:—(a) an annual contribution of 2s. 6d. per cent. of the net public debt of the States at 30th June, 1927 for a period of 58 years from 1st July, 1927 (in respect of New South Wales net public debt from 1st July, 1928); (b) an annual contribution of 5s. per cent. on new borrowings (except those for redemption, conversion or funding a State deficit) after 1st July, 1927 for a period of 53 years from the date of raising; (c) an annual contribution of 5s. per cent. on loans raised to meet revenue deficits occurring between 1st July, 1927 and 30th June, 1935 for a period of 39 years from 1st July, 1944.

3. **Special Grants.**—The Constitution provides in Section 96 for the granting of special financial assistance to the States. Western Australia has received financial assistance each year since 1910-11. In 1912 a grant was made to Tasmania, the amount payable in the first year, 1912-13, being £95,000, which was to be progressively reduced by £10,000 in each successive year. The Tasmania Grant Act 1913 provided for an addition to this grant, bringing the amount payable to £85,000 per annum to the year 1921-22, after which annual grants of varying magnitude were made. South Australia received £360,000 in 1929-30 and further grants in each successive year.

In 1933 the Commonwealth Government appointed the Commonwealth Grants Commission of three members to inquire into and report upon claims made by any State for a grant of financial assistance and any matters relevant thereto.

Applications have been received from South Australia, Western Australia and Tasmania during each year from 1933 and the recommendations of the Commission in respect of the years 1938-39 and 1945-46 to 1949-50 were as follows:—

COMMONWEALTH GRANTS COMMISSION: GRANTS RECOMMENDED.

(£.)

State.	1938-39.	1945-46. (a)	1946-47. (b)	1947-48. (b)	1948-49. (b)	1949-50. (c)
South Australia ..	1,040,000	1,400,000	2,000,000	2,318,000	2,850,000	4,174,000
Western Australia ..	570,000	950,000	1,873,000	2,977,000	3,600,000	5,618,000
Tasmania ..	410,000	646,000	875,000	747,000	1,000,000	1,262,000
Total ..	2,020,000	2,996,000	4,748,000	6,042,000	7,450,000	11,054,000

(a) Excludes Special Grants recommended under Section 6 (2) of the States Grants (Income Tax Reimbursement) Act 1942: 1945-46, South Australia, £1,101,365, Western Australia, £912,559 and Tasmania, £118,096, total £2,132,020.

(b) Includes additional grants recommended: 1946-47, South Australia, £400,000, Western Australia, £628,000 and Tasmania, £50,000, total, £1,078,000; 1947-48, Western Australia, £1,000,000; 1948-49, South Australia, £600,000, Tasmania, £100,000, total £700,000.

(c) Includes the excess of the assessed grant over the special grant received for 1947-48: South Australia, £324,000, Western Australia £768,000, Tasmania £262,000, total £1,354,000.

4. **States Grants (Tax Reimbursement) Acts.**—Details of the States Grants (Income Tax Reimbursement) Act 1942 and the States Grants (Entertainments Tax Reimbursement) Act 1942 are given in earlier issues of the Official Year Book (see No. 37, pages 635 to 637). These acts provided for grants to the States as compensation for vacating the fields of Income Tax and Entertainments Tax. Grants under these acts ceased after 1945-46 and were replaced by grants under the States Grants (Tax Reimbursement) Act

1946-1948. This Act provided for the following reimbursement grants to be paid to the States, the figures shown relating to 1946-47 and 1947-48 respectively :—New South Wales, £16,477,000, £18,536,625; Victoria, £8,860,000, £9,967,500; Queensland, £6,601,000, £7,426,125; South Australia, £3,458,000, £3,890,250; Western Australia, £3,384,000, £3,807,000; Tasmania, £1,220,000, £1,372,500; Total, £40,000,000, £45,000,000.

For 1948-49 and subsequent years an amount is to be determined by increasing the aggregate grants paid in 1947-48 (£45,000,000) by the same proportion as the aggregate population of the six States at the beginning of the financial year increases over the aggregate population of the six States at 1st July, 1947. This amount is to be further increased by a percentage equal to the percentage increase in average wages per person employed in the financial year preceding the year in which the reimbursement grants are to be paid over the average wages per person employed in 1945-46. The amount so determined will be the aggregate of the reimbursement grants and is to be distributed to the States in the following proportions :—

- (i) 1948-49 to 1956-57—(a) The following percentages of the grant shall be distributed in the proportion indicated by the distribution of the aggregate reimbursement grant in 1946-47 and 1947-48 viz. :—1948-49, 90 per cent; 1949-50, 80 per cent; and thus decreasing by 10 per cent. each year to 10 per cent. in 1956-57, and (b) the remainder in the proportion indicated by the "adjusted" population for each State.
- (ii) 1957-58 and subsequent years—the proportion indicated by the "adjusted" population* for each State.

It is provided that, if the application of the foregoing formula for distribution of the aggregate grants causes the amount of the reimbursement grant for any State to fall below the grant for 1946-47, the grant payable will be the same as that for 1946-47 and the balance of the aggregate grant is to be distributed between the remaining States in the proportions above.

An amount equal to arrears of State income taxes collected by the States in any year is to be deducted from the reimbursement grants for that year. The aggregate amount so deducted less any refunds of State income taxes made by the Commonwealth is to be repaid in the event of uniform taxation ceasing to operate. This amount bore interest at 3 per cent. up to 30th June, 1946, but thereafter, under the new arrangement, will bear no interest.

The payment of the tax re-imbursement grant in any year to any State is subject to the condition that that State does not impose a tax on incomes in that year.

5. *Grants for Road Construction.*—(i) *Main Roads Development Act 1923-25.* Grants amounting in the aggregate to £1,750,000 were made to the States in 1922-23, 1924-25 and 1925-26 for the purpose of reconditioning certain main roads. Of this amount £1,500,000 was granted on the condition that the States spent an equivalent amount.

(ii) *Federal Aid Roads.* The Federal Aid Roads Act 1926 made provision for the construction and re-construction of roads in the several States out of moneys provided by the Commonwealth and States respectively. The original agreement provided for a grant by the Commonwealth of £2,000,000 per annum for ten years from 1st July, 1926. The allocation to the States was in the same proportions as the allocation of grants under the Main Roads Development Act 1923-1925 and was based on three-fifths according to population and two-fifths according to area.

Expenditure was made in the proportion of 15s. by the States to £1 by the Commonwealth. In 1931 the original agreement was varied in certain respects, the most important of which operated from 1st July, 1931, when, in lieu of the £2,000,000 per

* In the "adjusted" population allowances are made for differences in the proportion of school children in the population and the density of the population in each state.

annum, the Commonwealth agreed to contribute an amount equivalent to 2½d. per gallon customs duty, and 1½d. per gallon excise duty on petrol entered for home consumption during each year, and the States were not required to make any contribution as formerly agreed upon.

The 1926 agreement, which was originally intended to remain in operation for ten years, was continued until 30th June, 1937, when a new agreement was entered into. The latter provided for the continuation of the Federal Aid Roads Agreement for a further period of ten years from 1st July, 1937, increased the amount payable to the States to 3d. a gallon customs duty and 2d. a gallon excise duty on petroleum and shale products (except benzol, on which the excise was only 1½d.), and stipulated that the proceeds of the extra ½d. per gallon should be expended on the construction, reconstruction, maintenance or repair of roads, or other works connected with transport. The allocation of the amount payable was in the proportion of 5 per cent. to Tasmania and the remaining 95 per cent. to the other States on the basis of three-fifths according to the population at 30th June, 1936, and two-fifths according to area. At the request of the Commonwealth Government the States were, up to a limit of one-twelfth of this additional amount, to attend to the maintenance or repair of roads of approach to or adjoining Commonwealth properties. A further variation was the reduction from 3 to 2½ per cent. of the sinking fund contribution of the States on loan moneys provided by them between 1926 and 1931.

(iii) *Commonwealth Aid Roads and Works.* The Federal Aid Roads and Works Agreement expired on 30th June, 1947, and was replaced by the Commonwealth Aid Roads and Works Act 1947, which provided for the following grants to be made to the States for the three years commencing on 1st July, 1947:—

- (a) An amount equal to 3d. a gallon customs duty and 2d. a gallon excise duty on petroleum and shale products (except benzol, on which the proportion of excise duty is 1½d. a gallon) entered for home consumption. Petroleum and shale products used in civil aircraft are to be excluded.
- (b) £1,000,000 in each year.

These grants are to be distributed to the States in the following proportion:—

- (1) 5 per cent. to Tasmania,
- (2) 95 per cent. to be distributed between the remaining States as to three-fifths according to population at 30th June, 1947, and two-fifths according to area.

The amount of the grant received by the States under (a) above is to be expended on the construction, reconstruction, maintenance and repair of roads and (not exceeding one-sixth) on other works connected with transport. The grant under (b) above is to be expended on construction and maintenance of roads in sparsely populated areas, timber country and rural areas or on purchase of road-making plant for use in those areas.

The Act also provides £500,000 per annum to be expended by the Commonwealth on strategic roads and roads of access to Commonwealth property and £100,000 for the promotion of road safety practices.

Amendments to the Act in 1948 and 1949 increased the grant under (b) above to £2,000,000 in 1948-49 and £3,000,000 in 1949-50.

In 1948-49 an additional £100,000 was paid to the Commonwealth Aid Roads and Works Trust Account from the Department of Transport's vote for expenditure on the promotion of road safety practices.

6. *Amounts Paid.*—(i) 1901 to 1949. The following table shows particulars of the amounts paid to each of the States since Federation, divided into three periods, with separate details for Special and Roads Grants. Special Commonwealth grants for the relief of primary producers are not included in this table. Details of these grants will be found in Chapter XX. "Agricultural Production".

(a) Includes surplus balances transferred to Consolidated Revenue Fund—Import Procurement Suspense Trust Account, £4,000,000; Marine War Risks Insurance Fund, £4,500,000; War Damage Fund, £5,500,000; Other Funds, £3,000,000; Total, £17,000,000. These items have been treated as reductions of receipts. (b) Includes surplus balances transferred to Loan Fund, £18,733,000 treated as reductions of receipts.

§ 4. Commonwealth Loan Funds.

Brief historical notes relating to the Commonwealth Loan Fund are given in earlier issues of the Official Year Book (*see* No. 37, page 640). In the following table details are given of the net expenditure from the Commonwealth Loan Fund for the years 1938-39 and 1945-46 to 1948-49 and the aggregate expenditure to 30th June, 1949. The figures given represent "net" loan expenditure, i.e., after adjustments have been made on account of amounts expended in earlier years

(a) Includes properties transferred from the States.

§ 6. Cost of War (1914-18) and Repatriation.

The general policy of the Commonwealth Government has been to pay from Consolidated Revenue all charges for interest, sinking fund, pensions and other recurring charges consequent upon the 1914-18 War, and part of the expense of repatriation. On the other hand, the whole direct cost of the War and the larger proportion of the cost of repatriation were paid from loans. Detailed particulars relating to Repatriation, War and Service Pensions appear in Chapter XXVII.—“Repatriation” of this issue. The total cost from both sources to 30th June, 1949, is set out in the following table :—

COMMONWEALTH 1914-18 WAR EXPENDITURE.
(£'000.)

Period.	From Consolidated Revenue Fund.			War Loan Expenditure. (b)
	War and Repatriation Services, including War Pensions.	Interest and Sinking Fund. (a)	Total.	
1914-15 to 1918-19 ..	15,541	30,694	46,235	219,213
1919-20 „ 1923-24 ..	50,370	94,597	144,877	77,374

1948-49	12,772	8,875	21,647	..
Discounts and Flotation Expenses on Loans, including Redemption and Conversion Loans	(c)	5,990
Indebtedness to the Government of the United Kingdom for payments made, services rendered, and goods supplied during the War	(d) 43,398
War Gratuities paid in cash ..	452	..	452	27,063
Total to 30th June, 1949	301,330	(e) 424,633	725,963	372,990

(a) Excludes interest on amounts raised for the States for Soldier Land Settlement. (b) Excludes expenditure on War Service Homes from 1923-24. (See page 791.) (c) Included above. (d) The total indebtedness to the Government of the United Kingdom involved in the Funding Arrangements Act 1921 was £92,480,000, the balance, £49,082,000, for cash supplied, being included above. At 30th June, 1949, the amount outstanding had been reduced to £79,724,000. Repayment of this debt and payment of interest were suspended in 1931, by arrangement with the United Kingdom Government. (e) Interest, £352,604,000; Sinking Fund, £72,029,000.

NOTE.—For particulars of expenditure relating to the 1939-45 War, see § 7, pages 794-5.

§ 7. Cost of Defence, War (1939-45) and Repatriation Services.

Details of the expenditure on Defence, War and Repatriation Services by the Departments of Defence, Navy, Army, Air, Munitions and Aircraft Production, Supply and Shipping, and Home Security are shown in the following table. Expenditure on other war and repatriation services by other departments, including Labour and National Service, Post-war Reconstruction, etc., is included under the heading of Other War and Repatriation Services.

The figures represent the combined expenditures from revenue, trust and loan funds for the years 1939-40 to 1948-49.

(a) Provided under Department of the Interior, payment to credit of Import Procurement Suspense Services.

(b) Includes £4,001,000 Working Capital for Trust Account.

(c) Provided under Ordinary

(d) Includes Publicity Campaignship.

(e) Munitions, Stores, etc., supplied to Governments of the United Kingdom and other Administrations.

(f) Includes expenditure from excess receipts of previous years appropriated for Defence Equipment Trust Account and from National Defence Contributions Trust Account.

§ 8. Commonwealth Public Service Superannuation Fund.

Details of this Fund are given in earlier issues of the Official Year Book (*see* No. 37, page 656).

The number of contributors to the fund at 30th June, 1947, was 46,191 (40,120 males and 6,071 females) and the average pension for which contributions were being made was—males, 6.839 units or £222 5s. 4d. per annum; females, 4.368 units or £141 19s. 2d. per annum.

The income for the year 1946-47 was £1,664,421 of which officers' contributions represented £1,124,258 and interest on investments, etc. (including accrued interest), £532,174. The expenditure for the year was £621,212, of which £296,574 represented pension payments and £253,818, refunds of contributions. At 30th June, 1947, the total funds invested amounted to £15,166,933 (at cost). The average rate of interest on investments at 30th June, 1947 was £3 15s. 5d. per cent.

Pensions in force on 30th June, 1947, including contributory and non-contributory but excluding commuted pensions, numbered 10,046, with a net annual liability of £1,254,711, of which £936,113 represented the share payable from the Consolidated Revenue Fund.

B. STATE FINANCE.

§ 1. General.

1. **Functions of State Governments.**—In comparing the financial returns of the States, allowances must be made for the various functions discharged by the respective Governments, and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another relegated to municipal or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the Central Government. Care, therefore, is needed in making comparisons, and the particulars contained in this Chapter should be read with those contained in Chapter XV, "Local Government". In many respects, moreover, the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such as railways, tramways, water supply, etc., which in other countries are often left to private enterprise.

2. **Accounts of State Governments.**—The various financial transactions of the States are in each case mainly concerned with one or other of three Funds:—the "Consolidated Revenue Fund", the "Trust Fund", and the "Loan Fund". All revenue (except certain items paid into special funds) collected by the State is paid into its Consolidated Revenue Fund, from which payments are made under the authority of an Annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a Special Act.

Figures in § 2 following relating to New South Wales represent the transactions of the Consolidated Revenue Fund and the Business Undertakings included in the Annual Budget Papers. These latter are as follows:—Railways, Tramways and Omnibuses, and Sydney Harbour Trust Section of the Maritime Services Board. Deductions have been made from the Budget figures, however, in order to obviate duplications caused by inter-fund payments and to maintain uniformity from year to year in the presentation of statistics. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

In Tasmania the separation of the Transport Commission's financial transactions from the Consolidated Revenue Fund from 1st July, 1939 has occasioned considerable decreases in the figures since 1939-40 as compared with those for the previous years.

The Trust Fund comprises all moneys held in trust by the Government, and includes such items as sinking funds, insurance companies' deposits, etc.

The Loan Fund is debited with all loan moneys raised by the State, and credited with the expenditure therefrom on public works or other purposes.

3. *Inter-relation of Commonwealth and State Finances.*—A statement in some detail, covering the inter-relation of Commonwealth and State finances during the period from the inception of Federation to the passing of the Financial Agreement Act 1928, was published in Official Year Book, No. 22, pages 379-80. Changes in the financial relations between the Commonwealth and States since the passing of the Financial Agreement Act have been described in issues of the Official Year Book from year to year (*see also* pages 785-790 and 816-8).

§ 2. State Consolidated Revenue Funds.

Division I.—Revenue.

1. *General.*—The principal sources of State revenue are :—

(a) Taxation; (b) the Business Undertakings controlled by the State Governments; (c) Sale of and Rental from Crown lands; (d) Payments by Commonwealth Government under the Financial Agreement, Special Grants and Tax Reimbursement Acts, etc.; (e) Interest on advances; and (f) Miscellaneous sources, comprising Fines, Fees, etc.

Of these sources, that yielding the largest revenue for the States as a whole is the group of Business Undertakings, the principal contributors being the Government Railways and Tramways. Next in magnitude are Commonwealth payments under the Tax Reimbursement Acts, followed in order by Taxation, the Commonwealth payments under the Financial Agreement and Special Grants, and Lands receipts. Since the introduction in 1942-43 of the Uniform Tax Scheme, Commonwealth payments under the Income and Entertainments Tax Reimbursement Acts and, from 1946-47, under the Tax Reimbursement Act, have replaced revenue previously received from Income and Entertainments taxes.

2. *Revenue Received.*—The following table shows particulars of the total amounts and the amounts per head of consolidated revenue received by the several States during the years 1938-39 and 1944-45 to 1948-49.

STATE CONSOLIDATED REVENUE.

Total ..	31 7 2	22 3 4	29 1 4	32 16 10	39 7 6	21 8 0	28 16 11

(a) See § 1 par. 2, page 797.

(b) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page.

(c) Includes payments under Financial Agreement, Special Grants and Prices Control Reimbursement Grants.

(d) Based on mean population of the financial year.

In comparing the revenue of the States, it should be borne in mind that business undertakings which in one State may be controlled by the Government are, in another State, controlled by a board or trust. For example, in New South Wales and Western Australia the tramway systems are controlled by the Government, while in the other States ownership is largely vested in trusts. Harbour and river services and water supply and sewerage are also controlled in some cases by the State and in others by trusts. All the Tasmanian transport facilities are controlled by a commission.

(ii) *Revenue from Taxation.* (a) *General.* The following table shows, for the year 1948-49, particulars of all State taxation collections irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those given in the tables relating to the Consolidated Revenue Funds and represent a comprehensive statement of all taxation collections by the Government in each State. In this and the succeeding statements of taxation the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under "Entertainments Tax" instead of under "Stamp Duties"

Prior to Federation, duties of Customs and Excise constituted the principal source of revenue from taxation. Thereafter, until the introduction of the Uniform Income Tax Scheme the most productive State taxes were the various Income Taxes, which, in 1941-42, included Unemployment Relief, State Development and Hospital Taxes.

The total amounts and the amounts per head raised from all sources of taxation by the several State Governments, including amounts not paid into the Consolidated Revenue Fund and tax reimbursements received from the Commonwealth, during the years 1938-39 and 1944-45 to 1948-49, are shown in the following table :—

financial year.

(b) Based on mean population of each

(b) *Probate and Succession Duties.* Probate duties have been levied for many years in all the States, but the provisions of the Acts governing the payment of duty differ widely both in regard to the ordinary rates and those which apply to special beneficiaries. A table showing the values of the estates in which probates and letters of administration were granted is given in Chapter XVI. "Private Finance".

The duties collected for the years 1938-39 and 1944-45 to 1948-49 are as follows :—

STATE PROBATE AND SUCCESSION DUTIES : NET COLLECTIONS.

(d) *Land Tax.* All the States impose a land tax, Queensland, the last State to fall into line, collecting its first levy in 1915-16. In New South Wales the State land tax is levied on the unincorporated portion of the Western Division of the State only.

The following table shows the amounts collected by means of such taxes during the years 1938-39 and 1944-45 to 1948-49 :—

STATE LAND TAX : NET COLLECTIONS.

(£.)

State.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.

(e) *Income Taxes.* State taxes levied on incomes prior to the introduction of the Uniform Tax Scheme in 1942-43 were as follows :—

New South Wales—Income Tax, Super Tax and Further Tax on Undistributed Income of Companies ;

Victoria—Income Tax, Special Income Tax, and Unemployment Relief Tax ;

Queensland—Income Tax, Super Tax, Additional Tax and Income (State Development) Tax ;

South Australia—Income Tax ;

Western Australia—Income Tax, Hospital Tax and Gold Mining Profits Tax ;

Tasmania—Income Tax.

Some details of these taxes are given in earlier issues of the Year Book.

When the Uniform Tax Scheme was introduced in 1942-43 these taxes, together with the Commonwealth War Tax, were discontinued, and the Commonwealth Income Tax rates were increased to raise the revenue previously raised by these taxes. The States are reimbursed by the Commonwealth for the revenue lost to them by the discontinuance of these taxes. Details of these reimbursement grants are given on page 789.

In the following table total State collections of the taxes mentioned above are shown for the year 1938-39. For the years 1944-45 to 1948-49 the total of Commonwealth Reimbursements and arrears of State taxes collected are shown.

(a) Includes revenue received under the States Grants (Income Tax Reimbursement) Act 1942.

(b) Includes revenue received under States Grants (Tax Reimbursement) Act 1946.

(f) *Motor Taxation.* Motor taxation comprises tax and registration fees on motor vehicles, and licences of motor dealers, motor drivers and motor cycle riders, and public vehicles except when controlled by local government authorities. The following table shows the collections for the years 1938-39 and 1944-45 to 1948-49 :—

Except in the case of South Australia, the proceeds of motor tax and motor registration fees are paid into special funds and the amounts do not appear in the Consolidated Revenue Funds.

(iii) *Business Undertakings.* (a) 1948-49. A very large proportion of State gross revenues is made up of receipts from business undertakings under the control of the Governments. The principal of these are railways and tramways, harbour works, water supply and sewerage and electricity supply, and, in addition, State batteries for the treatment of auriferous ores are included for Western Australia, and various minor revenue-producing services are rendered by the Governments of all States. For the year 1948-49 the revenue from these sources was £101,462,947 or 45.3 per cent. of the revenue from all sources. Details of revenue are as follows :—

STATE REVENUE FROM BUSINESS UNDERTAKINGS, 1948-49.

(iv) *Lands.* The revenue from the sale and rental of Crown lands has, with few exceptions, been treated from the earliest times as forming part of the Consolidated Revenue Funds, and has been applied to meet ordinary expenses. The following table shows the revenue from sales and rentals of Crown lands for the year 1948-49 :—

STATE LAND REVENUE, 1948-49.

(£.)

(v) *Commonwealth Payments.* Commonwealth Payments to the States represent a considerable proportion of the States' Revenue. In 1948-49 the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was £69,069,113 (30.8 per cent.). This was made up of the contribution towards interest on States' debts under the Financial Agreement, £7,584,912, special grants to the States of South Australia, Western Australia and Tasmania, £7,450,000, Prices Control Reimbursement, £546,409, and Tax Reimbursement Grants £53,487,792. The latter item has been included under State taxation above as it is paid to the States as a reimbursement for vacating the field of income taxation.

In addition to these, the States receive a number of other payments which are paid to Trust Funds. The main items in this class are the contribution towards the sinking fund on States' debts (£1,851,883 in 1948-49) paid to the National Debt Sinking Fund and grants for Commonwealth Aid Roads and Works (£7,101,286 in 1948-49) paid to State Trust Funds.

More detailed information concerning Commonwealth payments to the States is given under part A of this Chapter, (§ 2, Division IV., page 785).

(vi) *Interest and Miscellaneous.* In addition to the foregoing, there are in each State several miscellaneous sources of revenue, including such items as interest, fines, fees, etc. In 1948-49 interest, mainly from loans to local governing bodies and on public account balances, supplied £5,481,288 whilst "Miscellaneous" revenue which includes fines of the courts and fees for services amounted to £14,271,955.

Division II.—Expenditure.

1. *General.*—The principal heads of State expenditure from Consolidated Revenue Funds are :—

(a) Interest, sinking fund and exchange charges in connexion with public debt; (b) Working expenses of railways, tramways and other business and industrial undertakings; (c) Education; (d) Health and charitable expenditure; (e) Justice; (f) Police; (g) Penal establishments; and (h) all other expenditure, under which heading is included Public Works, Lands and Surveys, Agriculture and Forestry, Legislative and General Administration. Pensions and Miscellaneous.

In earlier years the working expenses of Railways and Tramways were the most important item of State Governmental expenditure, but, for a period prior to 1911-12, Public Debt charges were the heaviest item. Since then, however, Railways and Tramways expenditure has again taken the major place. In the year 1948-49 the working expenses of the Railways and Tramways and Omnibuses were 38.8 per cent. of the total expenditure from the State Consolidated Revenue Funds; next in importance were Public Debt Charges, 18.5 per cent.; Education, 12.3 per cent.; Charitable, Public Health and Hospitals, 9.8 per cent.; and Law, Order and Public Safety, 5.0 per cent.

2. **Total Expenditure.**—The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the years 1938-39 and 1944-45 to 1948-49 are shown in the following table :—

(a) Special Deposits Account and Special Accounts.

§ 4. State Loan Funds.

1. **General.**—As far back as 1842 revenue collections were supplemented by borrowed moneys, the earliest loan being raised by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2½d. to 5½d. per £100 per diem, or

approximately from $4\frac{1}{2}$ per cent. to 8 per cent. per annum. Australian public borrowing, however, is mainly due to the fact that the State Governments, in addition to ordinary administrative duties, undertake functions which in other countries are usually entrusted to local authorities or left to private enterprise. Foremost amongst these are the construction and control of the railway systems. Loan moneys have also been largely used for improvements to harbours and rivers, and for the construction of roads, water supply and sewerage works. The State loan expenditure and public debt thus differ very materially from those of most European countries, and from those of the Commonwealth, where such expenditure was very largely incurred for defence or war purposes. As shown above, the State debts consist chiefly of moneys raised and expended with the object of assisting the development of the resources of the country, and are to a very large extent represented by tangible assets.

Statements relating to Loan Expenditure are given below for both "gross" and "net" expenditure. The gross expenditure represents the amounts disbursed during each year whereas the net expenditure represents the gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

2. Details of Loan Expenditure.—(i) *Gross Loan Expenditure*, 1948-49. Particulars of the gross loan expenditure on Works, Services, etc., for the year 1948-49 are given in the following table:—

STATE GROSS LOAN EXPENDITURE ON WORKS, SERVICES, ETC., 1948-49.

(a) See footnotes (a) and (b) to table in par. 2 (ii) above.

The four tables in this paragraph and paragraph 2 do not include particulars of expenditure on loan discounts and flotations, the funding of deficits, the retirement of treasury bills, and similar items of a nature other than works, services, etc. The aggregate net expenditure on those items to 30th June, 1949 is shown in paragraph 4 following. Summaries of the gross and net expenditure and repayments in respect of all loan purposes for the years 1946-47 to 1948-49 are shown in paragraph 5 following.

4. Total Net Loan Expenditure to 30th June, 1949.—The total net loan expenditure including revenue deficits, etc., of the States from the initiation of borrowing to 30th June, 1949 amounted to £1,200,618,528. The purposes for which this sum was expended are shown in the following table:—

STATE NET LOAN EXPENDITURE TO 30th JUNE, 1949.

(a) Aggregate Gross Loan Expenditure. (b) Loans to Municipal Tramways Trust. (c) Not available separately. (d) Distributed under various particular headings. (e) Expenditure from Commonwealth Loans under Commonwealth-State Housing Agreement has been excluded. (f) Includes Industrial Undertakings and Immigration. (g) Under Prickly Pear Land Act. (h) Includes advances for Rabbit-proof Fencing. (i) Included with Advances to Settlers. (j) Includes Grain elevators, New South Wales and Victoria. (k) Includes Government Agency Department of Rural and Industries Bank, £2,790,262. (l) Includes £1,532,824, State Bank. (m) Includes Rural and Industries Bank, £5,244,600. (n) Contributions to Sinking Fund.

The figures in the foregoing table show the amounts actually expended from loan fund, and differ from those given later in the statements relating to the public debt, which represent the amount of loans still outstanding. The statement above includes all expenditure, whether the loans have been repaid or are still in existence. As in the earlier tables on net loan expenditure, allowance has been made, however, for credits on account of repayments of advances to local government bodies, settlers, etc., the sale

of assets, and transfers from other funds. In the public debt statement, on the other hand, loans repaid are not included, and in the case of loans still outstanding, each is shown according to the amount repayable at maturity, and not according to the amount originally available for expenditure.

5. Total Loan Expenditure, 1946-47 to 1948-49.—The following table gives particulars, in summary form, of the total loan expenditure in each State during each of the years 1946-47 to 1948-49.

STATE LOAN EXPENDITURE, SUMMARY.

Information relating to the States Public Debts is given in part D. "Commonwealth and State Public Debts (page 816).

C. COMMONWEALTH AND STATE FINANCE.

1. Revenue and Expenditure.—(i) *Consolidated Revenue Funds.* The following tables show the aggregate revenue and expenditure of the Consolidated Revenue Funds of the Commonwealth and States for each of the years 1938-39 and 1944-45 to 1948-49. In these tables the combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other sections of this Year Book. The items excluded from the adjusted figures include the following :—payments made by the Commonwealth to the States on account of tax reimbursements, interest under the Financial Agreement, special grants, Price Control reimbursements and estimated payments of pay-roll tax by the States to the Commonwealth.

COMMONWEALTH AND STATE CONSOLIDATED REVENUE FUNDS : REVENUE.

(f) Based on aggregate mean population of the six States for each financial year.

D. COMMONWEALTH AND STATE PUBLIC DEBT.**§ 1. General.**

Under the Financial Agreement between the Commonwealth and the States in 1927 the Commonwealth and State Public Debts were amalgamated and the Commonwealth Government accepted responsibility for the State Public Debts. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf and the debt is redeemed from a sinking fund to which both the Commonwealth and the States make contributions. Under the agreement the Commonwealth arranges for all borrowings on behalf of the Commonwealth and the States, and Commonwealth securities are issued for all money borrowed. In this issue of the Official Year Book one section is devoted to statistics of Commonwealth and State Public Debt. In previous issues statistics of public debt were included in each of the following three sections—Commonwealth Finance, State Finance, and Commonwealth and State Finance.

In the statistical tables relating to Public Debt the units of currency for debt outstanding and interest payable, with the exception referred to below, are:—Debt in Australia—£ Australian; Debt in London—£ Sterling; Debt in New York—£ (converted from dollars at the rate of \$4.8665 to £1).

The totals shown represent the total “face” or “book” value of the debt without adjustment on account of the differences in currency mentioned above.

In § 3. par. 5 only, details of the debt for the Commonwealth and each State are given in Australian currency.

§ 2. The Financial Agreement between the Commonwealth and the States.

1. **General.**—Full details of the Financial Agreement between the Commonwealth and the States are given in earlier issues of the Official Year Book (*see* No. 37, pages 685 to 690). In this section a summary of the main provisions only is given.

2. **Australian Loan Council.**—The Australian Loan Council was set up to co-ordinate the public borrowings of the Commonwealth and the States. It consists of the Prime Minister of the Commonwealth as Chairman and the Premier of each State, or Ministers nominated by them in writing. Each year the Loan Council examines the loan programmes of the Commonwealth and the States and determines the total amount to be borrowed during the year. Borrowings by the Commonwealth for defence purposes are not subject to decisions of the Loan Council.

3. **Loan Raisings for the Commonwealth and States.**—Subject to the decisions of the Loan Council, the Commonwealth arranges for all borrowings for or on behalf of the Commonwealth or any State, and for all conversions, renewals, redemptions, and consolidations of the Public Debts of the Commonwealth and of the States.

If the Loan Council unanimously decides, however, a State may borrow outside Australia in the name of the State, and may issue securities for the amount so borrowed. The Commonwealth then guarantees that the State will fulfil all its obligations to bondholders in respect of the money so borrowed and the money is deemed to be borrowed by the Commonwealth for and on behalf of the State.

Subject to any maximum limits decided upon by the Loan Council for interest, brokerage, discount and other charges, the Commonwealth or any State may—

- (i) Borrow within its own territory, for any purpose, money from any authorities, bodies, funds or institutions (including Savings Banks) constituted or established under Commonwealth or State law or practice;
- (ii) Borrow from the public by means of counter sales of securities; and
- (iii) Use any available public moneys.

However, any securities issued for money so borrowed or used must be Commonwealth securities on terms approved by the Loan Council.

4. **Taking over of State Public Debts.**—The Commonwealth took over on 1st July, 1929—

(a) the balance then unpaid of the gross public debt of each State existing on 30th June, 1927; and

(b) all other debts of each State existing on 1st July, 1929 for money borrowed by that State deemed by the Agreement to be money borrowed by the Commonwealth for and on behalf of the State—

and in respect of these debts assumed, as between the Commonwealth and the States, the liabilities of the States to bond holders.

5. **Transferred Properties.**—In respect of State properties transferred to the Commonwealth under Section 85 of the Constitution, the States, as from 1st July, 1929, were discharged from any liability in respect of principal, interest or sinking fund on so much of the debts bearing interest at 5 per cent. per annum, taken over by the Commonwealth, as amounted to the agreed value of these properties, namely £10,924,323.

6. **Payment of Interest.**—For a period of 58 years from 1st July, 1927 the Commonwealth agreed to contribute the sum of £7,584.912 towards the interest payable on the State debts. The balance of the interest payable on the State debts is paid to the Commonwealth by the States.

7. **Sinking Fund.**—(i) *State Public Debt existing at 30th June, 1927.* A sinking fund at the rate of 7s. 6d. per annum for each £100 of the net public debts of the States existing on 30th June, 1927, and conversions thereof, was established under the terms of the Agreement. The Commonwealth contributes annually from revenue 2s. 6d. per cent. on the net public debts of the States existing at 30th June, 1927 and each State contributes annually 5s. per cent. on the net public debt of such State at 30th June, 1927. The payments of the Commonwealth and of all States except New South Wales will continue for a period of 58 years from 1st July, 1927, and those of New South Wales for a similar period from 1st July, 1928.

(ii) *New Borrowings.* On new borrowings after 1st July, 1927 (except those for redemptions or conversions, or funding a State deficit) a sinking fund at the rate of 10s. per cent. per annum was established and the State and the Commonwealth contribute from revenue equal shares for a period of 53 years from the date of raising. (New South Wales did not commence sinking fund contributions in respect of new loans raised in the financial year 1927–28 until 1st July, 1928.)

(iii) *Loans raised to meet a Revenue Deficit.* In respect of any loan (except any of the loans referred to in par. (iv) below) raised after 30th June, 1927 by a State to meet a revenue deficit accruing after that date, no sinking fund contribution is made by the Commonwealth, but the State makes a sinking fund contribution at the rate of not less than 4 per cent. per annum of the loan for a period sufficient to provide for the redemption of the loan, the contributions being deemed to accumulate at the rate of $4\frac{1}{2}$ per cent. per annum compound interest.

(iv) *Loans raised to meet Revenue Deficits between 30th June, 1927 and 1st July, 1935.* In respect of loans raised by a State or by the Commonwealth on behalf of a State, on the security of Commonwealth Treasury Bills, to meet a revenue deficit accruing after 30th June, 1927 and before 1st July, 1935, special contributions are payable. Details of these contributions are given in Official Year Book No. 37, pages 688 and 689.

(v) *National Debt Commission.* The sinking funds established are controlled by the National Debt Commission which may arrange with any State to act as its agent in connexion with payments due to bond holders. Except where the conditions relating to sinking funds, redemption funds, and funds of a like nature held by a State on 30th June, 1929, precluded such transfer, all such funds were transferred to the National Debt Commission.

(vi) *Operation of Sinking Fund.* Sinking fund contributions made in respect of the debts of a State, and funds of that State transferred to the National Debt Commission, are not accumulated but must be applied, whenever expedient, to the redemption and repurchase of loan securities. When such a loan security is repurchased or redeemed by the National Debt Commission, it is cancelled, and the State, in addition to sinking fund contributions otherwise payable, pays a further annual sinking fund contribution at the rate of $4\frac{1}{2}$ per cent. on the face value of the cancelled security.

(vii) *Oversea Debt.* Sinking fund contributions in respect of oversea debt shall be calculated at the mint par of exchange prevailing on 1st July, 1927.

8. **Borrowing by Semi-Governmental Authorities.**—It was realized at the inception of the Loan Council that, in the interests of co-ordinated borrowing, the Council should be advised of borrowings of large amounts by semi-governmental authorities. In May, 1936, all resolutions passed by the Loan Council in connexion with semi-governmental borrowings were consolidated into one set of rules, which superseded all previous resolutions. This set of rules is regarded as the "Gentlemen's Agreement", and provides, *inter alia*, for the submission of annual loan programmes in respect of semi-governmental authorities proposing to raise £100,000 or more in a year, for the consideration of such programmes in conjunction with the loan programme of the Government concerned, and for the fixing of the terms of individual semi-governmental loans coming within the scope of the annual programme.

§ 3. Commonwealth and State Public Debt Outstanding.

1. **Public Debt and Annual Interest Payable at 30th June, 1949.**—In the following table details are given of the Commonwealth and State Public Debt and annual interest payable at 30th June, 1949.

(a) The debt maturing and interest payable in London have been adjusted to exclude a temporary increase due to the non-completion of a conversion operation. The amount of the adjustment is:—Debt: Commonwealth—War (1914-18), £217,260; Works and Other Purposes, £82,130; Total, £299,390; States—£1,681,398; Interest payable: Commonwealth—War (1914-18), £8,147; Works and Other Purposes £3,080; Total, £11,227; States—£72,178. (b) Excludes War (1914-18) Debt due to United Kingdom Government (£79,724,220). Repayment of this debt and interest thereon (£3,919,774) were suspended in 1931.

(c) Based on population at 30th June, 1949.

2. Public Debt and Annual Interest Payable, 1939 and 1945 to 1949.—In the following table details are given of the Public Debt and Annual Interest Payable at 30th June, 1939 and 1945 to 1949:—

(a) Based on population at 30th June in each year.

In some States certain public utilities such as Tramways, Water Supply and Sewerage, Harbour Services, etc., are controlled by Boards or Trusts, which, in addition to receiving advances from the Central Government, raise loans by public borrowing on their own behalf, while in other States these services are controlled by the Central Governments. Comparison of the debts of the States is therefore difficult, but on page 832 figures showing the aggregate debts of the States, including these local and semi-governmental authorities, are given for the years 1938-39, 1939-40, 1940-41, 1946-47 and 1947-48. Local and semi-governmental debt statistics are not available for the years 1941-42 to 1945-46.

5. Public Debt and Interest Payable in Australian Currency.—In the foregoing tables relating to Commonwealth and State Public Debt the debt outstanding in London is expressed in sterling, and debt outstanding in New York is expressed in pounds converted

from dollars at the rate of \$4.8665 to £1. This method of showing the debt gives no indication of the amount that the Australian Government would have to find to repay the debt. In the following tables the public debt and the interest payable are shown in terms of Australian currency throughout. Debt in London and in New York has been converted to Australian currency at the selling rate of exchange on 30th June, 1949.

Under the Financial Agreement Act 1944, Treasury Bills issued to meet State revenue deficits accruing between 1st July, 1928 and 30th June, 1935 were retired on 31st December, 1944. In place of those not redeemed, one per cent. debentures amounting to £43,018,000 were issued. One of these debentures will mature in each year up to 1983. Particulars of these debentures are included under their respective years of maturity in the tables above.

8. *Short Term Debt.*—(i) *Amount.* Particulars of the short-term debt (Treasury Bills and Debentures) of the Commonwealth and States in London and in Australia at 30th June, 1939 and at intervals from 30th June, 1945 to 30th June, 1949 are given in the following table. This debt is included in the public debt as shown elsewhere.

COMMONWEALTH AND STATE SHORT-TERM DEBT.(a)

Date.	Maturing in London. (£ Stg.'000.)			Maturing in Australia. (£ A.'000.)		
	Common-wealth.	States.	Total.	Common-wealth.	States.	Total.

(a) Excludes Overdrafts and Internal Treasury Bills.

(ii) *Interest Rates.*—(a) *London.* The rates of interest payable on Treasury Bills and Debentures in London during the following periods were : 1938-39 to 1940-41—minimum rate, 2 per cent., maximum rate, $2\frac{1}{4}$ per cent. ; 1941-42 to 1943-44—minimum rate, 2 per cent., maximum rate, 3 per cent. ; 1944-45 to 1948-49—minimum rate, 2 per cent., maximum rate, $2\frac{1}{4}$ per cent.

(b) *Australia.* The Treasury Bill rates in Australia were as follows:— $1\frac{3}{4}$ per cent. from 1st January, 1935 ; $1\frac{1}{2}$ per cent. from 1st May, 1940 ; $1\frac{1}{4}$ per cent. from 1st May, 1943 ; 1 per cent. from 1st March, 1945 ; $\frac{3}{4}$ per cent. from 1st May, 1949.

9. *State and Municipal and Semi-Governmental Authority Public Debt.*—For the reasons indicated on page 823 direct comparisons of the debts of the several States should be made with caution. The table following shows, for 1938-39 to 1940-41 and 1946-47 and 1947-48, particulars of the debts of the States and the debts due to the Public Creditor by municipal and semi-governmental authorities in each State. This affords a more reliable comparison, but as complete records are not available over a long period, particulars showing comparisons of the growth of the debt cannot be made.

STATE AND MUNICIPAL AND SEMI-GOVERNMENTAL AUTHORITY PUBLIC DEBT.

(a) Due to public creditor and excludes amounts due to Central Government. Includes Bank overdrafts.

Details of the debt of local and semi-governmental authorities were not compiled for the years 1941-42 to 1945-46.

§ 4. Commonwealth Loan Raisings.

1. **New Loans Raised 1939-40 to 1948-49.**—Under the Financial Agreement between the Commonwealth and the States, the Commonwealth is responsible for raising all loan moneys required by both the Commonwealth and the State Governments. Details of loan transactions given in this and the next two paragraphs relate, therefore, to all loans raised for the Commonwealth and the States. During the ten years 1939-40 to 1948-49 new public loans raised in Australia totalled £1,423,247,000. Of this, £1,174,351,000 was raised for Defence, War and Rehabilitation purposes, £45,607,000 for purposes of the Commonwealth-States Housing Agreement, £7,318,000 for public works and other purposes of the Commonwealth, £152,623,000 for public works and other purposes of the States, and £43,348,000 for funding short-term debt on account of States' revenue deficits. Except for £12,000,000 borrowed from the United Kingdom Government in 1940-41 and redeemed in 1943-44, no new loans were raised in London or New York during this period.

(a) Includes loans raised for redemption of Treasury Bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (see below).
 (b) Special issue (taken up by Commonwealth Bank of Australia).
 (c) Debentures issued for purpose of retiring Commonwealth Treasury Bills originally issued to meet revenue deficits of the States between 30th June, 1927 and 1st July, 1935.

In addition to the amounts included in the table above, at 30th June, 1949 £98,520,000 had been subscribed for War Savings and Savings Certificates (Five and Seven Years' Series), £1,792,000 for National Savings Bonds, £155,000 by War and National Savings Stamps and £15,977,000 for advance loan subscriptions.

After allowing for repurchases the net subscriptions to War Savings and Savings Certificates at 30th June, 1949 was £62,198,000.

"Over the Counter Sales," which are small amounts borrowed by the States by virtue of certain statutory rights, are also excluded from the above table. During the ten years these amounted to £19,548,000.

2. **Conversion and Redemption Loans, 1939-40 to 1948-49.**—(1) *Australia.* Particulars of conversion loans raised in Australia during the ten years 1939-40 to 1948-49 are given in the following table:—

(a) No account has been taken of cost of issuing the conversion loans at a discount. Exchange calculated at £A.125.375 = £ stg. 100. (b) Loan raised in London. (c) Loan raised in Australia.

NOTE.—Minus sign (—) indicates an increase in the annual liability for interest and exchange.

(iii) *New York.* During 1946-47 the Queensland 6 per cent. loan in New York became due for redemption and the option of redeeming other loans bearing interest at 5 per cent. and 4½ per cent. occurred. In order to take advantage of lower rates of interest, the Commonwealth gave notice that it intended to redeem the latter loans and four loans totalling \$128,000,000 were raised to provide the money for redemption. Particulars of these loans are given in the following table. These operations are the first conversion operations undertaken in New York.

(a) Includes loans raised for redemption of Treasury Bills. (b) "Over the Counter Sales" and net increase in debt on account of Citizens' National Emergency Loans, War Savings and Savings Certificates and Stamps, National Savings Bonds and Stamps, and Advance Loan subscriptions. Debt in London includes Citizens' National Emergency Loans and debt to United Kingdom Government.

NOTE.—Minus sign (—) denotes a decrease in debt.

§ 5. National Debt Sinking Fund.

1. Commonwealth Public Debt.—Particulars relating to the creation of sinking funds are included in issues of the Official Year Book prior to No. 23.

The old sinking funds were merged in the National Debt Sinking Fund on 11th August, 1923. Particulars of receipts and expenditure of the Commonwealth Account for the years 1938-39 and 1944-45 to 1948-49 were as follows:—

2. State Public Debt.—Prior to the passing of the Financial Agreement Act 1928, the practice by the States of providing sinking funds had been consistently followed in Western Australia only. This Act contains provisions for the establishment of a sinking fund on States' debts (see p. 817). Some particulars of the transactions of the National Debt Sinking Fund (States' Account) for 1948-49 are shown below, and further details are given in the *Finance Bulletin* issued by this Bureau.

(a) Investments of the States' Sinking Funds at 1st July, 1929, transferred to the National Debt Sinking Fund.

E. TAXES ON INCOME.

NOTE.—The following section was written prior to the introduction of the 1950-51 Commonwealth Budget, when certain changes in income taxes were made. For a description of the taxes inclusive of these changes see Appendix to this volume.

1. **General.**—A description of the development of income taxes in Australia appeared in Official Year Book, No. 35, p. 926. Since July, 1943, the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

2. **Present Taxes.**—At the time of writing two taxes on incomes of individuals are imposed by the Commonwealth—Income Tax and Social Services Contribution. Both taxes are based on the same definition of assessable income and both are assessed and collected concurrently. Several taxes are imposed on the income of companies for which assessable income is defined in the same way as for individuals.

3. **Assessable Income.**—Income taxes in Australia are levied, primarily, on all income derived from Australian sources by any person, rather than on income derived from all sources by Australian residents. Thus a non-resident is taxed on income derived in Australia while a resident is, in general, not taxed on income other than dividends derived from overseas (provided the income is taxed in the country in which it is derived).

Certain types of Australian income are exempt from tax in Australia, the most important being income from gold-mining and a small amount of tax-free interest on Commonwealth Government securities. No amount is included in assessable income on account of a house occupied by its owner. Profits derived from the sale of property are not assessable income if such property was not purchased with a view to resale at a profit.

Assessable income is divided into two main groups—personal exertion and property. Personal exertion income includes all wage, salary, business and professional incomes, while property income includes all rents, dividends and interest. Property income is taxed for individual income tax at higher rates than personal exertion income in all cases where the total taxable income exceeds £350. No distinction in rates is made for companies.

Expenses incurred in earning income, certain subscriptions to business associations, and trade union dues, are allowable deductions. Losses incurred in previous years may be carried forward as a deduction.

Because of uncongenial climatic conditions, isolation and high cost of living, taxpayers living in certain areas are allowed an additional deduction. Two zones have been prescribed and the allowances are Zone A, £120 and Zone B, £20.

Income Tax and Social Services Contribution are levied on the taxable income (known as "contributable income" for Social Services Contribution) remaining after making these deductions.

4. **Taxes on Individuals.**—Two income taxes, Social Services Contribution—which was introduced from 1st January, 1946—and Income Tax, are levied on individuals. Social Services Contribution is payable by all persons without dependants whose contributable income exceeds £104 per annum. Persons with dependants are exempt from Social Services Contribution if their annual income does not exceed the minimum as set out in paragraph 6 following. For the income year 1949-50 Income Tax is payable on income in excess of £500 from personal exertion sources alone, and on income in excess of £350 where income from property is included. Rebates of income tax are allowed to taxpayers on account of dependants, and certain medical expenses, taxes and life insurance premiums, etc. paid.

5. **Rebates of Tax.**—No deductions from taxable income are made for dependants but rebates of tax are allowed against income tax assessed. The rebates of tax for dependants are calculated by multiplying the amount specified in the following table for each

dependant by the personal exertion rate of tax applicable to the income plus eighteen pence. The rebate for any dependant cannot exceed the maximum rebate shown in the following table.

DEPENDANTS : CONCESSIONAL ALLOWANCES AND MAXIMUM REBATES.(a)

(£.)

Dependant (Resident).	Income Years 1948-49 and 1949-50.	
	Rebate of Tax on (b)—	Maximum Rebate.
Spouse or female relative (c) having care of taxpayer's children under 16 years of age	150	45
Daughter-housekeeper (c)	150	45
Housekeeper (c) having care of taxpayer's children under 16 years of age	150	45
Parent	150	45
First child under 16 years of age	100	45
Other children under 16 years of age	50	15
Invalid child, step-child, brother or sister over 16 years of age	100	45
Child 16 to 19 years receiving full-time education	100	45

(a) If the dependant is not wholly maintained by the taxpayer or is maintained for part only of the year a partial rebate is allowed. (b) If the taxpayer is entitled to a rebate for a dependant, an additional rebate of tax on £50 reduced by £1 for every £2 by which the income exceeds £250 is allowed. (c) Of a widower or widow.

Rebates at the same rate are allowed on the actual expenditure of the taxpayer on life assurance, superannuation and friendly society contributions (amount limited to £100 in 1948-49 and £150 in 1949-50); medical, hospital, pharmaceutical, optical, diathermic treatment and dental expenses; remuneration of an attendant on a blind or invalid person; expenditure on artificial limbs, artificial eyes or hearing aids; funeral expenses (amount limited to £30); rates and land taxes on non-income producing property (including an owner-occupied house); and gifts to charitable, benevolent or patriotic funds. The amount allowed for dental expenses is limited to £10 for the taxpayer or any one of his dependants and for the whole group medical, hospital, dental, etc., expenses to £50 for the taxpayer or any one of his dependants.

No rebates are allowed against Social Services Contribution, but a concessional rate of contribution is provided where the contributable income does not exceed the sum of the concessional allowances by more than £350 in 1948-49 or £500 in 1949-50.

A rebate of tax is also allowed on the amounts paid as calls to gold-mining, forestry, and oil prospecting companies at one-third of the normal rebate rate.

Interest on Commonwealth Loans issued prior to 1st January, 1940 is subject to the condition that it shall not be taxed at rates higher than those for 1930-31. Interest on Commonwealth Loans issued after 1st January, 1940 and interest on certain State semi-governmental loans issued free of State income tax receive a rebate of 2s. in the £1.

6. Lodgment of Returns and Assessment of Tax.—All persons with incomes in excess of £104 are required to lodge returns by the 31st July each year (31st August for business incomes). Tax and contribution payable are assessed and assessment notices showing the amount payable are issued during the year following the year of income (in most cases from September to June following the lodgment of the return). The approximate amount payable, however, has already been collected during the income year—from employees by deductions from wages and from non-employees by provisional tax and contribution. The amount shown on the assessment notice is therefore adjusted against the amount already collected and any difference either collected or refunded.

7. **Deductions from Wages and Salaries.**—Employers are required to deduct tax and contribution from each payment of wages and salary to an employee at the appropriate rate in accordance with a deduction scale. This scale shows the amount to be deducted according to the number of dependants the employee has, and makes an average allowance for other concessional rebates.

Under the group scheme of deduction, which covers most employers of over ten persons, the amount deducted is remitted to the Taxation Department, and after 30th June each year each employee is given a group certificate by his employer showing the amount of deductions made during the year. The employee then uses the group certificate for that year to meet, in full or in part, the assessment on that year's income when it is received.

Under the stamp scheme, used by small employers, a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of the deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

8. **Provisional Tax.**—For non-employees collection of tax and contribution for the current year is made at the same time as collection and assessment for the previous year is adjusted. The notice of assessment shows an amount of provisional tax and contribution for the current year. This provisional amount is an approximation to the tax and contribution which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged) but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax and contribution paid in the previous year as a credit against the tax and contribution assessed on the basis of the return for that year.

Employees with more than £50 income from sources other than wages and salaries are also required to pay provisional tax in respect of that income.

9. **Effective Exemptions from Tax.**—In 1949-50 taxpayers without dependants were exempt from Social Services Contribution if their income did not exceed £104 and were exempt from Income Tax if their income did not exceed £350 where income from property was included, and £500 where the income was from personal exertion sources only. The effect of the rebates for dependants was to exempt taxpayers (with personal exertion income only) up to the incomes shown below in the years 1948-49 and 1949-50 :—

RESIDENT TAXPAYERS : EFFECTIVE EXEMPTIONS FROM TAX.

			Over £10,000	162T - 359,225

For 1948-49 income the basic rate of Social Services Contribution was 3d. in the £1 plus three-fiftieths of a penny for every £1 by which the contributable income exceeded £100. The maximum basic rate was 1s. 6d. in the £1 which was reached at an income of £350 and applied to all incomes over that amount. If the contributable income did not exceed the sum of the concessional allowances by more than £350 a concessional rate was provided. The concessional rate was the basic rate multiplied by the ratio of the excess of the contributable income over the sum of the concessional allowances to the lesser of the contributable income or £350.

For the income year 1949-50 the basic rate of Social Services Contribution was 3d. in the £1 plus three-eighths of a penny for every £1 by which the contributable income exceeded £100. The maximum basic rate remained at 1s. 6d. in the £1 and was reached at an income of £500. If the contributable income did not exceed the sum of the concessional allowances by more than £500 a concessional rate was applied.

If the contributable income exceeded the sum of the concessional allowances by less than £100 the concessional rate was threepence multiplied by the ratio of the excess of the contributable income over the concessional allowances to £100. If the contributable income exceeded the sum of the concessional allowances by more than £100 but less than £500 the concessional rate was the basic rate for a contributable income equal to the excess of the contributable income over the sum of the concessional allowances.

Social Services Contribution is payable if the contributable income is greater than £104. The amount of contribution is not to exceed one-half of the amount by which the contributable income exceeds £104 if the contributor has no dependants, or £156 if the contributor is entitled to a concessional rebate in respect of a dependant.

The rate of Income Tax and Social Services Contribution for farmers and pastoralists is determined by the average taxable income of the five years up to the current year, but the rate is applied to the taxable income of the current year.

The minimum amount of Social Services Contribution payable is 10s. and the amounts payable and rebates are calculated to the nearest shilling.

11. Taxes on Sample Individual Incomes.—The following table shows the Income Tax and Social Services Contribution payable by taxpayers with various incomes and numbers of dependants on income derived in 1948-49 and in 1949-50 :—

12. *Company Income Taxes.*—(i) *General.* For taxation purposes, companies are divided into two main groups—public companies and private companies. A private company is defined as a company in which all the issued shares are held by not more than twenty persons or which is under the control of not more than seven persons, and which is not a company in which the public are substantially interested or a subsidiary of a public company. Ordinary income tax is imposed on both groups of companies, but other taxes on companies are imposed according as to whether a company is public or private. Pay-as-you-earn taxation and Social Services Contribution have not been applied to companies.

(ii) *Public Companies.* (a) *Ordinary Income Tax.* The income of companies is assessed for Commonwealth Income Tax on the same principles as for individuals. Dividends received are assessable income both for companies and individuals, but resident companies receive a rebate at the average rate on the amount of dividends included in the taxable income. This rebate is not allowed to non-resident companies. The rate of ordinary income tax is 5s. in the £1 on the first £5,000 of taxable income and 6s. in the £1 on the remainder. For mutual life assurance companies this rate is reduced to 4s. in the £1 on the first £5,000 of taxable income and 5s. in the £1 on the remainder. The rate on Commonwealth Loan Interest subject to 1930-31 rates is 1s. 4d. in the £1.

(b) *War-time (Company) Tax.* The War-time (Company) Tax, first imposed in 1940-41 on income derived in 1939-40, was discontinued after 1946-47. Information relating to this tax is given in earlier issues of the Official Year Book (*see* No. 37, page 696).

(c) *Super Tax.* A Super Tax of 1s. in the £1 on the excess of the taxable income over £5,000 is imposed. All companies receive a rebate of 1s. in the £1 on the amount of dividends (from companies which have already paid super tax) included in super tax income.

Commonwealth Loan Interest subject only to 1930-31 rates of tax is excluded from super tax income since the full 1930-31 rate of 1s. 4d. in the £1 is already paid as ordinary income tax.

(d) *Undistributed Income Tax.* Since 1940-41 a tax has been imposed at the rate of 2s. in the £1 on the undistributed income of a public company. The undistributed income is the taxable income less :—

- (a) Commonwealth Income Tax, Super Tax, and War-time (Company) Tax (now discontinued), and tax paid outside Australia on the taxable income ;
- (b) dividends paid out of the taxable income before the expiration of six months (nine months if the company is a non-resident) after the close of the year of income ;
- (c) the net loss incurred in carrying on the company's business outside Australia ; and
- (d) the portion of Commonwealth Loan Interest subject to 1930-31 rates remaining in the undistributed income.

Mutual life assurance companies and non-resident companies not carrying on business in Australia are exempt from the tax.

(iii) *Private Companies.* Private companies are not liable for Super Tax or the normal Undistributed Income Tax. However, an additional tax on the undistributed income is imposed, this tax being based on the close relationship between a private company and a partnership.

The undistributed income is calculated in approximately the same way as for a public company, but, instead of a flat rate of 2s. in the £1 being imposed, the additional Income Tax and Social Services Contribution which would have been payable by the shareholders, if all the income had been distributed, is calculated, and this amount is charged to the company as additional tax on undistributed income. In this way the shareholders of a private company are required to pay approximately the same tax as if they were a partnership or sole traders.

13. *Yield of Income Taxes.*—(i) *Collections from all Income Taxes.* The following table shows the collections of taxes of all types imposed on income for the years 1938-39, and 1944-45 to 1948-49 :—

INCOME TAX COLLECTIONS. (£'000.)

Year.	Individuals.			Companies.			Total.		
	Common-wealth.	State.	Total.	Common-wealth.	State.	Total.	Common-wealth.	State.	Total.
1938-39 ..	7,582	18,314	25,896	4,300	11,498	15,798	11,882	29,812	41,694

(a) Includes Social Services Contribution.

(b) As a result of the introduction of the pay-as-you-earn system, the amount of tax assessed in 1944-45 on income derived in 1943-44 was reduced to approximately one-quarter of the amount which otherwise would have been payable.

(c) Grade £601-750.

(d) Grade

(e) Grade £15,001-£25,000.

(f) Grade £25,001-£50,000.

CHAPTER XVIII. MINERAL INDUSTRY.

§ 1. The Mineral Wealth of Australia.

1. *Place of Mining in Australian Development.*—The value of production from the mineral industry is now considerably less than that returned by the agricultural, the pastoral or the dairying industry; nevertheless it was the discovery of gold in payable quantities that first attracted population to Australia in large numbers and thus accelerated its national development.

2. *Extent of Mineral Wealth.*—The extent of the total mineral wealth of Australia cannot yet be regarded as completely ascertained, as large areas of country still await systematic prospecting. More detailed reference to this matter will be found in preceding issues of the Official Year Book. (*See No. 22, p. 755.*)

During the years 1934 to 1940 a survey of certain areas in Australia north of the 22nd parallel of South Latitude was undertaken by the Governments of the Commonwealth, Queensland and Western Australia. This survey is referred to in § 16 below.

3. *Quantity and Value of Production in 1947.*—The quantities (where available) and the values of certain of the principal minerals produced in each State, and in Australia as a whole, during 1947, are shown in the tables immediately following. It must be clearly understood that the figures quoted in these tables refer to the quantities and values of the various minerals in the form in which they were reported to the State Mines Departments, and represent amounts which the Mines Departments consider may fairly be taken as accruing to the mineral industry as such. They are not to be regarded as representative of Australia's potentiality as a producer of metals, this matter being dealt with separately in § 17 below. New South Wales is, of course, in normal times, a large producer of iron and steel from ironstone mined in South Australia. As the table shows, the latter State receives credit for this ironstone in its mineral returns. The iron and steel produced therefrom cannot be assigned to the mineral industry of New South Wales, but the value of the transformation from ore to metal is credited to the manufacturing industry of that State. Similarly, lead, silver-lead, cadmium, cobalt and zinc are credited in the form reported to the State of origin—chiefly New South Wales—although the actual metal extraction is carried out principally in South Australia and Tasmania.

The quantities of cadmium and cobalt recovered in Tasmania from zinc ores mined in New South Wales during 1947 are shown in § 8, par. 2 (page 870).

(a) For Items excluded see letterpress below.

(b) See letterpress preceding this table.

(c) Incomplete. (d) Diatomite. (e) Includes chinastone. (f) Includes ball-clay.

(g) Damourite. (h) Cut and crude. (i) Includes jarosite. (j) Not available.

(k) Concentrates. (l) Includes pyritic ore, £18,767 and alunite, £41,212.

The figures in the foregoing table exclude certain commodities, such as stone for building and industrial uses, sand, gravel, brick and pottery clays, lime, cement and slates, which might be included under the generic term "mineral". Particulars of the production of some of these items are given in par. 6, Quarries, below. Items excluded, such as cement, carbide and sulphuric acid, are included in manufacturing production, and, in any case, only the raw material could properly be included in mineral production. The items excluded from the total for New South Wales in 1947 consisted of—lime, £90,867; building stone, £167,032; Portland cement, £1,588,693; coke, £2,675,423; road material, and gravel, £854,902; shell grit, £9,577; sulphur and sulphuric acid, £206,135; and brick and pottery clays, £285,815. Carbide, cement and limestone, £360,845 have been excluded from the Tasmanian figures.

4. **Value of Production, 1938, 1943 to 1947.**—The values of the minerals produced in each State during the years 1938 and 1943 to 1947 are given in the table hereunder:—

MINERAL PRODUCTION : VALUES.
(£.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Australia.
1938 ..	19,786,157	1,884,015	3,966,119	2,932,473	10,844,469	1,889,804	214,724	32,517,761
1943 ..	16,984,110	1,593,994	4,214,525	3,070,716	6,383,755	2,378,533	130,795	34,756,428
1944 ..	17,057,691	1,602,105	4,477,087	2,926,666	5,667,497	2,220,136	126,025	34,077,207
1945 ..	16,879,131	1,830,374	4,355,127	2,309,991	5,804,238	1,034,066	176,197	33,269,124
1946 ..	20,327,962	2,079,353	4,701,403	2,776,145	7,584,707	2,853,674	166,543	40,553,787
1947 ..	26,264,688	2,206,628	8,545,299	3,209,382	8,862,277	4,224,756	229,437	53,542,467

The value of mineral production in Australia reached its highest level in 1947 at £53,542,467 compared with £40,553,787 in 1946 and £32,517,761 in 1938. Although this marked increase was due to some extent to increased quantity output the main contributing factors were the increased prices paid in 1947 for coal, silver, lead and zinc.

Since 1938 the greatest increase has occurred in New South Wales, £15,478,531; followed by Queensland, £4,579,180; Tasmania, £2,334,952; Victoria, £322,613; and South Australia, £276,909. Because of the reduced output of gold in Western Australia, the value of minerals produced in that State was £1,982,192 lower in 1947 than in 1938.

5. **Total Production to end of 1947.**—In the next table will be found the estimated value of the total mineral production in each State up to the end of 1947. The items excluded from the preceding table are also omitted here, and consequently the total for New South Wales is £77,780,000 less than that published by the State Department of Mines. The principal items excluded from the table below are coke, £37,500,000; cement, £35,750,000; lime, £2,575,000; and considerable values for marble, slate, granite, chert, gravels, etc., which the State Department now includes in the returns for quarries.

MINERAL PRODUCTION : VALUES TO END OF 1947.
(£'000.)

Mineral.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Australia.
Gold ..	73,454	319,373	100,525	2,161	290,245	11,378	3,799	800,935
Silver and lead ..	188,127	285	19,066	386	2,663	13,975	67	224,569

Zinc ..	34,042	..	5,685	16	5	8,137	..	47,885
Coal ..	311,119	25,909	40,599	143	13,937	3,506	..	395,213
Other ..	13,187	1,226	4,188	11,901	2,414	4,277	428	37,621
Total ..	667,588	348,310	221,207	90,233	312,819	94,319	6,072	1,740,548

The "other" minerals in New South Wales include alunite, £229,000; antimony, £442,000; arsenic, £212,000; bismuth, £261,000; chrome, £143,000; diamonds, £151,000; magnesite, £842,000; molybdenite, £232,000; opal, £1,644,000; scheelite, £259,000; and shale oil, £3,815,000. In the Victorian returns antimony ore was responsible for £637,000. The value for coal in this State includes £8,760,000 for brown coal. Included in "other" in the Queensland production were opal, £189,000; gems, £657,000; bismuth, £147,000; cobalt, £158,000; molybdenite, £630,000; limestone flux, £903,000; and arsenic, £124,000. The chief items in South Australian "other" minerals were salt, £6,760,000; limestone flux, £904,000; gypsum, £1,866,000; phosphate, £194,000; and opal, £370,000. In Western Australia arsenic, £742,000; gypsum, £199,000; and asbestos, £242,000 were the principal items included with "other" minerals. In the Tasmanian returns osmiridium was responsible for £662,000, scheelite for £958,000 and limestone flux for £1,393,000.

6. Quarries.—Statistics giving details of the output of quarries were first published in Official Year Book No. 33, 1940. The details were collected following a resolution of the Conference of Australian Statisticians held in 1935.

The Conference defined a quarry, for the purpose of these statistics, as one in which four hands or more are employed, or in which power other than hand-power is used. The details given in the following table represent the output of quarries conforming to this definition, although in a few relatively unimportant cases details of other establishments have been included.

The authorities responsible for the collection of these statistics are the Government Statistician in New South Wales, Victoria, Queensland and Western Australia, and the Department of Mines in South Australia and Tasmania.

It should be noted that the inclusion of returns from certain small establishments tends to inflate the figures in the following tables, but there is possibly a compensating factor in that some quantities used by shires and municipalities in the repair of roads have not been returned to the collecting authority.

OUTPUT OF QUARRIES, 1947.

(c) Not available.

§ 2. Gold.*

1. **Discovery in Various States.**—The discovery of gold in payable quantities was an epoch-making event in Australian history, for, as one writer aptly phrases it, this event “precipitated Australia into nationhood”. A more or less detailed account of the finding of gold in the various States appears under this section in Official Year Books, Nos. 1 to 4.

2. **Production at Various Periods.**—(i) *Quantities.* The following table shows the quantity of gold produced in the several States and in Australia as a whole during each of the nine decennial periods from 1851 to 1940, and in single years from 1941 to 1948. Owing to the defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development large quantities of gold were taken out of Australia by successful miners who preferred to keep the amount of their wealth secret.

GOLD : QUANTITY PRODUCED.

Total, 1851-1948	16,045	73,064	21,742	447	52,204	2,369	704	166,575

The amount of gold raised in Australia in any one year attained its maximum in 1903, when Western Australia also reached its highest point. For the other States the years in which the greatest yields were obtained were as follows :—New South Wales, 1852 ; Victoria, 1856 ; Queensland, 1900 ; South Australia, 1904 ; and Tasmania, 1899.

* The values quoted in this section are in Australian currency throughout.

Owing to the exhaustion of the more easily worked deposits and increased costs due to deep mining the production of gold in Australia declined from 3,837,979 fine oz. in 1903 to 427,160 fine oz. in 1929, the lowest output since the discovery of the precious metal.

Increased activity in prospecting due to prevailing economic conditions resulted in some improvement in 1930, but the marked development between that year and 1939 received its impetus from the heavy depreciation of Australian currency in terms of gold. Oversea and local capital were attracted to the industry, and the employment of advanced geological methods and technical improvements brought many difficult or abandoned propositions into profit. The output of gold rose annually from 467,742 fine oz. in 1930 to 1,645,697 fine oz. in 1939. Following the outbreak of war in 1939, production fell very slightly in 1940, and rapidly thereafter, due to the diversion of manpower, until in 1944 it was only 656,867 fine oz. In 1945, the year in which hostilities in the 1939-45 War ceased, production showed practically no change, but in 1946 a marked increase of 167,267 fine oz. or 25 per cent. was recorded. In 1947, there was a further increase of 113,174 fine oz. or 13.7 per cent. to 937,654 fine oz., but in 1948 production declined by 46,849 fine oz. or 5.0 per cent. to 890,805 fine oz.

(ii) *Values.* In the next table the gold produced since 1851 is valued in Australian currency. For the years 1851 to 1918 and 1925 to 1930 the price used was £4 4s. 11¹/₁₁d. per fine oz. For the years 1919 to 1924 the price ranged between £5 12s. 6d. in 1920 and £4 8s. 6d. in 1923. The value applied for 1931 and to June, 1932 was the export parity calculated directly from London prices. Since then the average price paid by the mints in Australia has been used.

Total, 1851-1948	74,071,799	320,110,467	101,274,270	2,182,784	297,403,012	11,517,264	3,962,762	810,522,358

(a) Period July, 1911 to June, 1920.

(b) Period July, 1920 to December, 1930.

Values per fine oz. in Australian currency assigned to the production of gold during recent years are: £9 14s. 5¹/₂d. in 1939, £10 13s. 1¹/₂d. in 1940, £10 13s. 8d. in 1941, £10 9s. 0¹/₂d. in 1942, £10 9s. 0d. in 1943, £10 10s. 1¹/₂d. in 1944, £10 13s. 11¹/₂d. in 1945 and £10 15s. 3d. in 1946, at which level it remained until 19th September, 1949. On that date, following the alteration in the rate of exchange, the value of gold rose to £15 9s. 10d. per fine oz. in terms of Australian currency. Further information regarding the price of gold is given in Chapter XVI, "Private Finance".

3. *Changes in Relative Positions of States as Gold Producers.*—The figures in the table showing the value of gold raised explain the very large increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached the State each year. With the exception of 1889, when its output was exceeded by that of Queensland, Victoria maintained its position as the chief gold producer for a period of forty-seven years, until its production was surpassed by that of Western

Australia in 1898. From that year onward the proportion contributed by Western Australia has increased and in 1948 represented 75 per cent. of the entire yield of Australia. The proportion contributed by this State for the period 1851 to 1948 was 31 per cent. and by Victoria for the same period 44 per cent.

4. **Place of Australia in the World's Gold Production.**—The table below shows, in decennial periods from 1851 to 1940, the world's gold production (as ascertained from authoritative sources) and the share of Australia therein. The details of world production shown for the years 1941 to 1945 are possibly less complete than those shown for previous years because of censorship during the war. The figures recorded for these years represent recorded production only and therefore omit any production for those countries not reporting. Included in this latter group are the Soviet Union, and other producing countries of lesser importance.

GOLD : WORLD PRODUCTION.

Period.		World Production of Gold.	Gold Produced in Australia.	Percentage of Australian Production of Total.
		Fine oz.	Fine oz.	%

1944	(a) 22,100,000	656,867	2.97
1945	(a) 21,300,000	657,213	3.09
1946	21,600,000	824,480	3.82
1947	21,800,000	937,654	4.30

(a) Recorded production only. (See letterpress above.)

The quantities of gold produced in the principal producing countries in each of the years 1938 and 1943 to 1947 are shown in the table hereunder.

GOLD : PRODUCTION IN PRINCIPAL COUNTRIES. (¹000 fine oz.)

Country.	1938.	1943.	1944.	1945.	1946.	1947.
Union of South Africa	12,161	12,804	12,280	12,225	11,927	11,198
Canada	4,725	3,651	2,923	2,697	2,832	3,070
U.S.S.R. (Russia) ..	5,236	(a)	(a)	(a)	(a)	(a)
United States of America (b)	4,145	(b) 1,318	(b) 1,022	(b) 1,115	(b) 1,462	2,321
Australia	1,592	751	657	657	824	938
Philippine Islands ..	903	14	(a)	13	(a)	64
Korea	948	412	119	96	(a)	(a)
Mexico	924	632	509	524	430	465
Japan, including						
Formosa	852	487	357	65	43	69
Rhodesia	815	657	593	568	551	523

(a) Not available.

(b) Refinery production.

The next table shows for the decennium 1938 to 1947 the average yearly production in ten of the principal gold-producing countries, of which five are within the British Commonwealth.

**GOLD : AVERAGE ANNUAL PRODUCTION IN PRINCIPAL COUNTRIES,
1938 TO 1947.**
(Fine oz.)

Country.	Quantity.	Country.	Quantity.
British Countries—		Foreign Countries—	
Union of South Africa ..	12,799,999	U.S.S.R. (Russia) ..	(a) 5,433,333
Canada	4,045,578	United States of America	2,901,891
Australia	1,135,970	Mexico	677,485
Gold Coast	678,502	Belgian Congo	438,400
Rhodesia, North and South	689,658	Colombia	542,120

(a) Average three years 1938 to 1940.

5. **Employment in Gold-mining.**—The number of persons engaged in gold-mining in each State at various intervals since 1901 is shown in the following table. The figures include prospectors, etc., so far as they are ascertainable, and include those who may not have worked during the whole of the year.

GOLD-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Total.
1901 ..	12,064	27,387	9,438	(a) 1,000	19,771	1,112	(a) 200	70,972
1903(b) ..	11,247	25,208	9,229	(a) 1,000	20,716	973	(a) 200	68,573
1913 ..	3,570	11,931	3,123	800	13,445	481	175	33,525
1923 ..	1,141	2,982	603	32	5,555	119	30	10,462
1933 ..	6,913	6,126	4,161	231	9,900	229	95	27,655
1938 ..	3,764	6,315	3,378	158	15,374	141	267	29,397
1943 ..	771	719	1,297	29	5,079	19	40	7,954
1944 ..	512	550	1,243	28	4,614	23	45	7,015
1945 ..	509	643	1,256	16	4,818	15	46	7,303
1946 ..	772	1,282	1,651	38	6,961	13	106	10,823
1947 ..	795	1,135	1,834	50	7,649	14	176	11,653

(a) Estimated. (b) Year of maximum production for Australia.

Owing to the exhaustion of the more easily worked deposits and increased costs due to deep mining, the number employed in gold-mining had dwindled to the comparatively small figure of 6,108 in 1929. Stimulated by the enhanced price of gold, employment in the industry rose more than five-fold to 33,113 in 1935, but thereafter the numbers employed declined each year to 7,015 in 1944. Following the cessation of hostilities and a relaxation of manpower control, the numbers rose to 7,303 in 1945, to 10,823 in 1946 and to 11,653 in 1947.

6. **Tax on Gold.**—(i) *General.* The Commonwealth Government imposed a tax on gold produced in Australia or in any Territory under its jurisdiction and delivered to the Commonwealth Bank on or after 15th September, 1939. The rate of tax was fixed at 50 per cent. of the price payable by the Bank in excess of £A9 per fine oz.

The tax on gold yielded £1,214,621 during 1939-40; £1,452,260 during 1940-41; £1,030,425 in 1941-42; £524,694 in 1942-43; £317,720 in 1943-44; £342,457 in 1944-45; £383,552 in 1945-46 and £556,435 in 1946-47. This tax was suspended as from 20th September, 1947 by the Gold Tax Suspension Act 1947.

(ii) *Development of Gold Mining Industry.* Assistance amounting to £150,000 was given to the gold-mining industry, through the medium of the States, during 1940-41. In addition, an amount approximating £150,000 was paid during 1942 and subsequent years for the maintenance of those mines where, under manpower control, miners were transferred to other activities more directly associated with the war effort.

The suspension of the tax on gold referred to above was designed to assist the gold-mining industry in meeting higher costs and to encourage a greater output.

7. **Bounty on Production.**—A reference to the bounty provided by the Commonwealth on gold production in Australia appears in Official Year Book No. 32, p. 579.

§ 3. Silver, Lead and Zinc.

1. **Production.**—(i) *General.* The values of the production of silver, silver-lead ore and lead from the various States during each of the years 1938 and 1943 to 1947 are shown in the following table:—

SILVER AND LEAD : VALUE OF PRODUCTION.

(£.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938 ..	3,520,465	647	926,614	70	29,477	267,773	..	4,745,046
1943 ..	3,752,672	2,278	230,837	62	16,475	333,958	..	4,335,382
1944 ..	4,068,935	1,280	14,733	309	15,807	313,618	..	4,414,682
1945 ..	4,625,665	1,622	17,788	601	22,757	259,560	..	4,927,993
1946 ..	6,999,543	2,687	836,879	224	43,860	527,937	..	8,411,130
1947 ..	10,580,658	1,910	2,866,980	1,676	48,751	829,929	..	14,329,904

(ii) *New South Wales.* (a) *General.* The figures for New South Wales for 1947 include silver to the value of £26,242 and silver-lead ore and concentrates valued at £10,554,416. Since the Sulphide Corporation Ltd. ceased smelting operations in 1922 the silver (metal) has been obtained chiefly in the refining of gold and copper ores, and there has been no production of lead (pig). It may be noted here that the bulk of the carbonate and siliceous ore from the Broken Hill field is sent for treatment to Port Pirie in South Australia, while the remainder of the ore is concentrated on the field and then dispatched to Port Pirie for refining. The output of silver-lead ores and concentrates in 1947 decreased by 3,518 tons compared with the previous year, but owing to increased prices the value rose by more than £3,500,000.

It must be understood that the totals for New South Wales in the table above represent the net value of the product (excluding zinc) of the silver-lead mines of the State. In explanation of the values thus given, it may be noted that, as previously mentioned, the metallic contents of the larger portion of the output from the silver-lead mines in the State are extracted outside New South Wales, and the Mines Department considers, therefore, that the State should not take full credit for the finished product. The real importance of the State as a producer of silver, lead and zinc is thus to some extent understated.

(b) *Broken Hill.* Broken Hill, in New South Wales, is the chief centre of silver production in Australia. The value of the output of the principal mines in the Broken Hill field totalled £207.3 million to the end of 1946. In 1947 the value of output was £12,389,400 and in 1948, £17,927,995. A description of the silver-bearing area in this district is given in earlier issues of the Official Year Book. (See No. 4, p. 506.)

(c) *Other Areas.* Silver is found in various other localities in New South Wales, the most important being at Captain's Flat where Lake George Mines produced concentrates estimated to contain 173,895 oz. of silver, 7.944 tons of lead and 13,399 tons of zinc in 1945; 253,870 oz. of silver, 10,355 tons of lead, and 17,891 tons of zinc in 1946; 202,102 oz. of silver, 8,453 tons of lead, and 14,497 tons of zinc in 1947; and 135,813 oz. of silver, 5,973 tons of lead, and 10,540 tons of zinc in 1948. Production on a small scale recommenced during 1946 at Yerranderie, and amounted in that year to 111 tons of ore, containing 11,100 oz. of silver and 27 tons of lead; in 1947, 150 tons of ore, containing 1,506 oz. of silver and 35 tons of lead; and in 1948, 173 tons of ore, containing 16,075 oz. of silver and 43 tons of lead. In addition, 6,902 oz. of silver were obtained in 1948 in conjunction with the gold-copper ores at Cobar.

(iii) *Victoria.* The silver produced in 1947 amounted to 10,133 oz., valued at £1,910 and was obtained in the refining of gold at the Melbourne Mint.

(iv) *Queensland.* The production of silver decreased from 3,055,435 oz. in 1942 to 112,710 oz. in 1945, whilst lead production dropped from 33,512 tons in 1942 to nil in 1945. This decrease was due to suspension of silver-lead and zinc operations by Mount Isa Mines Ltd. during the time it was engaged in producing copper. Mining for copper

ceased at Mount Isa in 1946 and the production of silver, lead and zinc was resumed. The production of silver rose from 980,538 fine oz. in 1946 to 2,100,966 fine oz. in 1947 whilst the output of lead rose from 12,754 tons to 29,590 tons and zinc from 11,361 tons to 25,216 tons.

(v) *South Australia.* In 1947, production of silver amounted to 752 oz. valued at £172 compared with 607 fine oz. valued at £151 in 1946.

(vi) *Western Australia.* The quantity of silver obtained as a by-product and exported in 1947 was 199,302 fine oz. valued at £47,814 compared with 171,452 fine oz. valued at £42,792 in 1946.

(vii) *Tasmania.* The silver produced in 1947 amounted to 918,791 fine oz., valued at £169,068, and the lead to 7,719 tons, valued at £660,861, produced in the Western Division of the State. About 146,776 oz. of the total silver output were contained in silver-lead, 27,892 oz. in the blister copper produced by the Mount Lyell Co., and 744,123 oz. in zinc lead ore.

(viii) *Northern Territory.* A rich deposit of silver-lead and copper ore was located in 1930 at the Jervois Range about 200 miles east of Alice Springs. Development is hindered, however, by transport difficulties and lack of permanent water. Rich sulphides have been found at Barrow Creek. Production during the past ten years has been very intermittent and not very great in the years when any output was recorded.

2. **Production, Sales and Stocks of Refined Silver, 1939 and 1944 to 1948.**—The following table sets out as fully as possible the total production and distribution of refined silver in Australia. It is based on the data published by the Australian Mines and Metals Association and shows the stocks of refined silver in Australia, production and sales (locally and overseas) during the years 1939 and 1944 to 1948. Comparable figures for the year 1938 are not available.

REFINED SILVER : PRODUCTION, SALES AND STOCKS, AUSTRALIA.
(‘000 fine oz.)

Particulars.	1939.	1944.	1945.	1946.	1947.	1948.
Stock from previous year ..	122	437	414	465	241	445
Production for year ..	9,552	7,176	7,464	6,183	6,658	6,212
Total Supply ..	9,674	7,613	7,878	6,648	6,899	6,657
Sold to Australian consumers	1,794	7,199	7,413	6,407	3,560	1,375
Exported or sold for export	7,518	2,894	4,998
Stock on hand at end of year	362	414	465	241	445	284
Total Disposals and Stocks	9,674	7,613	7,878	6,648	6,899	6,657
Silver Contents of Ores and Concentrates Produced ..	15,320	9,366	8,077	9,073	9,527	10,058

3. **World Production.**—The world's production of silver during the years 1938 and 1943 to 1947 is estimated to have been as follows :—

SILVER : WORLD PRODUCTION.
(‘000 fine oz.)

1938.	1943.(a)	1944.(a)	1945.(a)	1946.(a)	1947.(a)
267,765	195,010	173,060	151,173	131,119	159,000

(a) Output of reporting countries.

The world's production of silver during 1938 amounted to about 268 million fine oz., of which Australia contributed 13.9 million fine oz., or 5.2 per cent. The production for Australia includes an estimate of the silver contents of the ores, bullion and concentrates exported.

The estimated yields of the principal silver-producing countries in 1947 (or the latest year available) were as follows:—

SILVER: PRODUCTION IN PRINCIPAL COUNTRIES, 1947.

('000 fine oz.)

Country.	Production.	Country.	Production.
Mexico	49,198	British India (including Burma)	(a) 6,175
United States of America ..	36,053	Belgian Congo	4,057
Canada	12,504	Yugoslavia	(b) 2,570
Peru	10,783	Argentina	2,435
Australia	9,527	Japan	2,272
U.S.S.R. (Russia)	(a) 7,000	Union of South Africa ..	1,147
Germany	(b) 7,000	Newfoundland	956
Bolivia	6,237	Chile	747

(a) Year 1940.

(b) Year 1939.

4. **Production of Lead in Australia.**—For reasons already mentioned, difficulties arise when an attempt is made to show the production of lead by States. This is due to the fact that production is largely recorded in terms other than metal. The chief sources of production are New South Wales, Queensland and Tasmania.

The details of production, sales, and stocks given in the table following have been compiled from data supplied by the Australian Mines and Metals Association. Comparable figures for the year 1938 are not available.

REFINED LEAD: PRODUCTION, SALES AND STOCKS, AUSTRALIA.

(Tons.)

Particulars.	1939.	1944.	1945.	1946.	1947.	1948.
Stocks from previous year (a)	10,290	73,720	18,959	17,418	24,726	(b) 5,028
Production for year ..	199,437	154,547	155,852	137,459	158,548	159,497
Total Supply ..	209,727	228,267	174,811	154,877	183,274	164,525
Sold to Australian consumers	32,217	29,853	30,168	42,040	33,242	34,774
Exported or sold for export	164,684	179,455	127,195	88,111	138,378	123,890
Stock on hand at end of year a	12,826	18,959	17,418	24,726	11,654	(b) 5,861
Total Disposals and Stocks	209,727	228,267	174,811	154,877	183,274	164,525
Lead Contents of Ores and Concentrates Produced ..	280,003	189,485	164,741	184,314	196,623	216,955

(a) Physical stocks.

(b) Unsold stocks.

5. **Prices of Silver, Lead and Zinc.**—In view of the close association in Australia, particularly in New South Wales, of ores containing these metals, the average prices in sterling of each metal on the London Metal Exchange during the years shown have been incorporated in the table hereunder. During 1942, 1943 and 1944, prices remained unchanged at the 1941 levels.

PRICES OF SILVER, LEAD AND SPELTER, LONDON METAL EXCHANGE.
(£ s. d. Stg.).

Metal.	1938.	1941.	1945.	1946.	1947.	1948.
Silver per fine oz.	0 1 9.06	0 2 1.31	0 2 6.51	0 4 0.7	0 3 8.4	0 3 9.0
Lead .. per ton	15 6 6	25 0 0	27 15 11	48 1 7	85 1 7	95 10 0
Spelter „ „	14 1 7	25 15 0	28 16 7	43 1 11	70 0 0	80 0 9

(a) Maximum price as fixed by the British Ministry of Supply.

The prices of lead and zinc in Australia were fixed by Prices Regulation at £A22 per ton in February, 1940, and continued at that level up to December, 1948. In January, 1949, the local price of lead was increased to £A35 per ton and zinc to £A40 per ton. The price of silver, however, was not so fixed and the following prices per fine oz. in Australia represent the export parity calculated directly from London prices:—2s. 3.8d. in 1939; 2s. 6.1d. in 1940; 2s. 7.5d. in the years 1941 to 1944; 3s. 2.2d in 1945; 5s. 0.8d. in 1946; 4s. 7.6d. in 1947, and 4s. 8.4d. in 1948.

6. **Employment in Silver, Lead and Zinc-mining.**—The average number of persons employed in mining for these metals during each of the years 1938 and 1943 to 1947 is given below:—

SILVER, LEAD AND ZINC-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Nor. Terr.	Australia.
1938 ..	5,612	530	..	4	421	3	6,570
1943 ..	3,982	239	..	2	466	..	4,689
1944 ..	3,896	445	..	4,341
1945 ..	3,929	34	417	..	4,380
1946 ..	4,713	1,003	2	5	453	..	6,176
1947 ..	5,331	994	12	..	523	2	6,862

§ 4. Copper.

1. **Production.**—Copper is widely distributed throughout Australia. South Australia and New South Wales were once large producers but the output of these States is much less than it was in earlier years. The chief sources of production are now centred in Queensland and Tasmania.

The values of the local production as reported and credited to the mineral industry for the years 1938 and 1943 to 1947 are shown hereunder. Quantities for Australia as a whole, as returned by the several State Mines Departments, are appended at the foot of the table :—

COPPER : PRODUCTION.

State.	1938.	1943.	1944.	1945.	1946.	1947.
	£	£	£	£	£	£
New South Wales ..	87,905	379,800	309,900	305,000	344,682	290,005
Queensland ..	203,967	1,111,049	1,644,747	1,500,662	648,122	338,508
South Australia ..	15,333	10,100	12,115	11,674
Western Australia ..	1,275	33	(a) 367	364	105	6,071
Tasmania ..	580,238	691,199	633,188	463,294	716,212	1,057,825
Northern Territory ..	4,362	2,393	1,878	3,811	6,282	..
Australia ..	893,080	2,194,574	(a) 2,602,195	2,284,805	1,715,403	1,693,309
Ingot, Matte, etc. ..	Tons. 18,751	Tons. 25,894	Tons. (a) 29,365	Tons. 25,850	Tons. 19,160	Tons. 14,040
Ore and Concentrates	935					

(a) Incomplete.

In the following table, details of the production, sales and stocks of refined copper, as compiled by the Australian Mines and Metals Association, are given for the years indicated. Comparable figures for the year 1938 are not available :—

REFINED COPPER : PRODUCTION, SALES AND STOCKS, AUSTRALIA.
(Tons.)

Particulars.	1939.	1943.	1944.	1945.	1946.	1947.	1948.
Stocks from previous year ..	1,342	972	587	800	2,611	1,313	409
Production for year ..	17,867	20,457	19,898	20,498	22,659	19,303	11,389
Total	19,209	21,429	20,485	21,298	25,270	20,616	11,798
Sold to Australian consumers	18,808	20,842	19,685	18,687	22,957	20,207	11,407
Exported or sold for export	100	1,000
Stocks on hand at end of year	301	587	800	2,611	1,313	409	391
Total	19,209	21,429	20,485	21,298	25,270	20,616	11,798

2. Sources of Production.—(i) *New South Wales.* The copper content of ores and concentrates produced in New South Wales in 1947 amounted to 2,391 tons.

(ii) *Queensland.* In 1947 the yield of metallic copper in this State amounted to 2,778 tons compared with 6,481 tons in 1946 and 15,007 tons in 1945.

The decrease in recent years is due to the suspension at Mount Isa of copper production and the resumption thereof of silver-lead and zinc operations. Copper production was begun at Mount Isa as a war-time expedient. The chief producing area in 1947 was Mount Morgan, which produced 2,570 tons during the year.

(iii) *South Australia.* Deposits of copper are found over a large portion of South Australia, and its total production to date exceeds that of any other State notwithstanding that output has diminished to negligible dimensions since the exhaustion of the ore reserves on the principal copper fields. No production was recorded in 1946 or 1947.

(iv) *Western Australia.* During 1947, the quantity of copper reported was 917 tons, valued at £6,071, compared with 74 tons for £105 in 1946.

(v) *Tasmania.* The quantity of copper produced in Tasmania during 1947 was 7,954 tons, valued at £1,057,825, the Mount Lyell Mining and Railway Co. Ltd. accounting for the greater part of the production. This company treated 34,418 tons of ore and concentrates and produced blister copper, containing copper (7,668 tons), silver (28,291 oz.) and gold (5,401 oz.), the whole being valued at £1,001,054.

(vi) *Northern Territory.* Copper has been found at various places in the Territory. In 1947 there was no production, but during 1946 there were 279 tons produced compared with 96 tons in 1939.

3. **World Production of Copper.**—The world's estimated production of copper during the years 1938 and 1943 to 1947 is shown below. The figures have been obtained from authoritative sources, but some countries did not report their production during the war years and in these cases estimates have been used.

COPPER : WORLD PRODUCTION.

(Tons of 2,240 lb.)

1938.	1943.	1944.	1945.	1946.	1947.
2,020,000	2,700,000	2,500,000	2,120,000	1,790,000	2,170,000

The yields from the principal copper-producing countries reporting in 1947 were as follows:—

COPPER : PRODUCTION IN PRINCIPAL COUNTRIES, 1947.

(Tons of 2,240 lb.)

Country.	Production.	Country.	Production.
United States of America ..	756,000	Germany	(a) 30,000
Chile	420,000	Peru	22,000
Canada	202,000	Japan	21,500
Northern Rhodesia ..	192,500	Australia	14,040
Belgian Congo	148,000	Turkey	10,000
U.S.S.R. (Russia) ..	140,000	Belgium	8,000
Mexico	62,500	Spain	6,000
Yugoslavia	30,000	Bolivia	6,000

(a) Year 1939.

During 1947 the share of the United States of America in the world's copper production amounted to nearly 35 per cent. while the Australian proportion was less than 1 per cent.

4. **Prices.**—At the outbreak of war in 1939, the price of copper in Australia and the United Kingdom was fixed by Regulation. Details of the average price for the years shown are given in terms of Australian currency and sterling in the following table :—

AVERAGE PRICE PER TON OF COPPER IN AUSTRALIA AND UNITED KINGDOM.

(£ s. d.)

Country.	December, 1939.	1944.	1945.	1946.	1947.	1948.
Australia — in Aust. currency	63 17 6	105 0 0	100 0 0	95 0 0	123 5 9	140 0 0
United Kingdom in Sterling ..	62 0 0	62 0 0	62 0 0	77 4 0	130 12 4	134 0 0

5. **Employment in Copper-mining.**—The number of persons employed in copper-mining during each of the years 1938 and 1943 to 1947 was as follows :—

COPPER-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938	13	213	67	4	1,015	5	1,317
1943	260	864	36	1	821	1	1,983
1944	210	919	37	..	799	4	1,969
1945	145	814	3	2	738	5	1,707
1946	134	59	11	1	709	9	923
1947	184	48	..	2	733	15	982

In 1917 over 9,000 persons were engaged in copper-mining.

§ 5. Tin.

1. **Production.**—The values of the production of tin as reported to the Mines Departments in each of the States during the years 1938 and 1943 to 1947 are given in the following table. A separate line is appended showing the production of refined tin as recorded by the Australian Mines and Metals Association for the years indicated.

TIN : PRODUCTION.

State.	1938.	1943.	1944.	1945.	1946.	1947.
	£	£	£	£	£	£
New South Wales ..	286,768	403,320	309,860	291,788	257,153	246,423

(a) Not available.

(b) Incomplete.

VALUE OF PRINCIPAL MINERALS PRODUCED—AUSTRALIA, 1850 TO 1947.

EXPLANATION.—The upper curve represents the total value of mineral production while the vertical distances between the curves represent the value of production of each mineral.

LIVE STOCK—AUSTRALIA, 1860 TO 1949.

(See page 893.)

EXPLANATION.—This is a ratio graph, the vertical scale being logarithmic and the curves rise and fall according to the rate of increase or decrease. Actual numbers are indicated by the scale at the side of the graph.

2. Sources of Production.—(i) *New South Wales*. Production of tin in 1947 was stated at 552 tons of ore, valued at £246,423, compared with 674 tons, valued at £257,153, in 1946. A large proportion of the output in this State is obtained in normal years by dredging, principally in the New England district.

(ii) *Victoria*. The production of tin in this State is obtained chiefly by dredging in the Beechworth district and by mining in the Toora district in Gippsland. The production in 1947 amounted to 87 tons of concentrates, valued at £25,397, compared with 64 tons, valued at £14,917, in 1946.

(iii) *Queensland*. The chief producing districts in Queensland during 1947 were Herberton, 1,283 tons, valued at £359,325; Cooktown, 28 tons, £8,588; Stanthorpe, 27 tons, £8,058; Chillagoe, 11 tons, £2,940; Kangaroo Hills, 31 tons, £7,794; and Ingham, 15 tons, £4,410. The total production in 1947 amounted to 1,396 tons, valued at £390,833 compared with 977 tons, valued at £220,901 in 1946. It is interesting to compare these production figures with those recorded in the early years of this century when the output ranged between 2,000 and 5,000 tons per annum.

(iv) *Western Australia*. The quantity of tin reported in this State in 1947 amounted to 24 tons, valued at £5,565, and was obtained mainly in the Pilbara and Greenbushes fields.

(v) *Tasmania*. For 1947 the output amounted to 830 tons of tin, valued at £353,045, an increase of 129 tons on the output of the previous year.

(vi) *Northern Territory*. The production for 1947 amounted to 20 tons of concentrates valued at £4,698, compared with 15 tons of concentrates valued at £3,228 produced during 1946.

3. World Production.—The world's production of tin during each of the years 1938 and 1942 to 1947 was as follows:—

TIN : WORLD PRODUCTION.
(Tons of 2,240 lb.)

1938.	1942.	1943.	1944.	1945.	1946.	1947.
148,600	119,700	138,400	101,100	90,000	88,600	114,500

The production of tin reached its maximum in 1941 when 241,400 tons were recorded. The following are the chief producing countries of the world:—Bolivia, Malaya, Indonesia, Belgian Congo and Nigeria. Normally these countries produce about three-quarters of the total production.

The yields from the principal producing countries in 1947 were as follows:—

TIN : PRODUCTION IN PRINCIPAL COUNTRIES, 1947.
(Tons of 2,240 lb.)

Country.	Production.	Country.	Production.
Bolivia	33,259	Burma	1,818
Federation of Malaya	27,026	Siam	1,401
Indonesia	15,915	United Kingdom	898
Belgian Congo	14,897	Japan	600
Nigeria	9,139	Spain and Portugal	503
China	(a) 4,000	Union of South Africa	483
Australia	2,445	Argentina	468

(a) Estimated.

The world's tin production in 1947 was estimated at 114,500 tons of which Australia's share was about 2.1 per cent.

4. Prices.—At the outbreak of war in September, 1939, the price of tin in Australia and London was fixed by Regulation. Details of the movement in average prices for the years shown are given in terms of Australian currency and sterling in the following table :—

AVERAGE PRICE PER TON OF TIN IN AUSTRALIA AND UNITED KINGDOM.
(£ s. d.)

Country.	December, 1939.	1944.	1945.	1946.	1947.	1948.
Australia—in Aust. currency	299 0 0	376 0 0	376 0 0	376 0 0	438 15 0	520 0 0
United Kingdom —in sterling..	271 0 0	300 0 0	300 0 0	336 2 10	425 18 7	548 1 11

5. Employment in Tin-mining.—The number of persons employed in tin-mining during the years 1938 and 1943 to 1947 was as follows :—

TIN-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Victoria. (a)	Q'land.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938	1,440	5	1,263	73	1,123	15	3,919
1943	1,175	4	599	7	847 (b)	45 (c)	2,679
1944	927	26	532	5	834 (b)	46	2,370
1945	814	4	465	13	736 (b)	48	2,080
1946	778	..	462	10	695	49	1,994
1947	523	..	528	9	627	52	1,739

(a) The tin produced in Victoria was raised by a dredging company operating primarily for gold.
(b) Includes some engaged in mining for tantalite. (c) Includes two miners in South Australia.

§ 6. Zinc.

1. Production : States.—(i) *New South Wales.* The production of zinciferous concentrates is confined chiefly to the Broken Hill district of New South Wales, where zincblende forms one of the chief constituents in the enormous deposits of sulphide ores. The re-opening in 1937 of the mine at Captain's Flat by the Lake George Mines, Ltd. was an important development. Production commenced in 1939. Details of the zinc contents of ores and concentrates produced at this mine are given in the table below.

As the metallic contents of the bulk of the concentrates, etc., produced from these fields are extracted outside New South Wales, the mineral industry of that State is not credited by the Mines Department with the value of the finished product. During 1947 the zinc concentrates produced amounted to 240,420 tons, valued at £1,774,959. Portion of the zinc concentrates produced is treated at Risdon in Tasmania and the balance is exported, mainly to the United Kingdom and the United States of America. The production from these concentrates treated by the Electrolytic Zinc Company of Australia Ltd. at Risdon amounted to 52,241 tons of zinc, 153.82 tons of cadmium and 11.9 tons of cobalt oxide in 1947. This is referred to in the Tasmanian production below.

(ii) *Queensland.* The production of zinc in the Cloncurry district of Queensland during 1943 was 5,077 tons, valued at £76,158, compared with 21,035 tons, valued at £394,412 in 1942 and 4,411 tons, valued at £68,863, obtained in 1935. The metal was produced by the Mount Isa Mines Ltd. and was exported overseas as concentrates. There was no production in 1944 and 1945 but operations were resumed in 1946, the output reaching 11,361 tons in that year and increasing in 1947 to 25,216 tons valued at £1,738,600.

(iii) *South Australia.* Zinc is known to exist in various localities in South Australia, but there has been no production during recent years.

(iv) *Tasmania.* The production of zinc from Tasmanian ores was suspended from 1931 to 1935. Developmental work on the Mount Read-Rosebery district was continued during that period and production commenced in 1936. In 1937—the first full year's operations since the inception of milling at Rosebery—23,481 tons, valued at £525,824, were obtained. In 1947, 18,513 tons of zinc, valued at £1,295,883, were obtained from Tasmanian ores, as well as 35 tons of cadmium valued at £15,470 and 4 cwt. of cobalt oxide valued at £83.

In addition to the foregoing the Electrolytic Zinc Company of Australia Ltd. at Risdon operated on raw materials obtained from Broken Hill in New South Wales. Production from this source during 1947 amounted to 52,241 tons of slab zinc, valued at £1,201,543, 153.82 tons of cadmium, valued at £68,910 and 11.93 tons of cobalt oxide, valued at £5,500.

2. **Production : Australia.**—The details furnished above do not adequately convey the potentialities of Australia as a producer of zinc. A better indication is given in the following table which shows the estimated zinc contents of ores and concentrates produced in Australia according to data compiled by the Australian Mines and Metals Association. Comparable figures for 1938 are not available.

ZINC CONTENTS OF ORES AND CONCENTRATES PRODUCED.
(Tons.)

Year.	New South Wales.			Queensland.	Tasmania.	Australia.
	Broken Hill.	Lake George.	Total.	Mt. Isa.	Rosebery.	Total.
1939..	145,207	11,850	157,057	29,092	31,107	217,256
1944..	128,384	19,657	148,041	..	26,317	174,358
1945..	118,566	11,893	130,459	..	19,854	150,313
1946..	122,776	15,187	137,963	11,269	22,678	171,910
1947..	120,993	12,667	133,660	24,904	23,604	182,258
1948..	136,144	9,445	145,589	21,578	23,151	(a) 190,469

(a) Including 151 tons from other sources.

In the next table details are given of the quantity of refined zinc produced in Australia, the quantity sold and stocks held for the years 1939 and 1944 to 1948, according to data compiled by the Australian Mines and Metals Association. Comparable figures for 1938 are not available.

REFINED ZINC : PRODUCTION, SALES AND STOCKS, AUSTRALIA.
(Tons.)

Particulars.	1939.	1944.	1945.	1946.	1947.	1948.
Stocks from previous year ..	3,225	3,314	11,295	4,786	531	3,685
Production for year ..	71,220	78,716	83,773	76,316	69,421	81,312
Total ..	74,445	82,030	95,068	81,102	69,952	84,997
Sold to Australian consumers	31,088	19,828	26,639	35,984	47,442	42,018
Exported or sold for export..	43,137	50,997	63,643	44,587	18,825	37,100
Stocks on hand at end of year	220	11,295	4,786	531	3,685	5,879
Total ..	74,445	82,030	95,068	81,102	69,952	84,907

3. **World Production.**—The world's production of zinc ore in terms of metal during the years 1939 and 1942 to 1947 was as follows :—

ZINC : WORLD PRODUCTION.

(Tons of 2,240 lb.)

1939.	1942.	1943.	1944.	1945.	1946.	1947.
1,920,000	2,160,000	2,110,000	1,964,000	1,751,000	1,733,000	1,848,000

Particulars of the production of zinc ore, expressed in terms of metal, are given in the following table for the principal producing countries for 1947.

ZINC : PRODUCTION IN PRINCIPAL COUNTRIES, 1947.

(Tons of 2,240 lb.)

Country.	Production.	Country.	Production.
United States of America ..	569,293	Belgian Congo ..	44,475
Mexico	192,721	Newfoundland ..	39,481
Canada	185,592	Sweden	35,358
Australia	182,258	Spain	(b) 35,000
U.S.S.R. (Russia) ..	(b) 105,000	Japan	29,068
Germany	(a)	Rhodesia	21,600
Peru	57,262	Bolivia	14,381
Italy	53,700		

(a) Not available.

(b) Estimated.

The production of Australia quoted above represents the metallic contents of zinc ores produced during 1947 and is equal to 9.9 per cent. of world output. The quantity of zinc metal extracted in Australia in that year was 69,421 tons.

4. **Prices and Employment.**—Information regarding prices of zinc and employment in zinc-mining will be found on page 857.

§ 7. Iron.

1. **General.**—Although iron ore is widely distributed throughout Australia, the only known ore bodies of large extent and high grade which are easy of access are those situated at Yampi Sound, Western Australia and at Iron Knob, South Australia. Estimates of the reserves at these centres place the quantities available at approximately 100 million tons and 150 million tons respectively. Bearing in mind the expansion of the iron industry in Australia, and the limitations of these reserves, the Commonwealth Government prohibited the export of iron ore from 1st July, 1938. A survey of the iron ore resources of Australia undertaken by the Commonwealth Geologist was completed at the end of 1940.

2. **Production.**—(i) *New South Wales.* The production in 1935 of pig-iron from ores mined in New South Wales amounted to 4,580 tons, valued at £18,320. No iron ores were produced from 1935 until 1941 when 202,180 tons of ore were mined. In 1942,

375,297 tons were mined but only 86,185 tons in 1945. Since that year there has been no iron-ore mined in this State for conversion into pig-iron. For many years the chief source of supply has been South Australia.

Small quantities of iron oxide produced in New South Wales are used by the various gas-works for purifying gas, and also in the manufacture of paper, and for pigments. These supplies are drawn chiefly from the deposits in the Port Macquarie Division. During 1947 the iron oxide raised amounted to 9,238 tons, valued at £7,633. Ironstone flux amounting to 2,432 tons, valued at £950 was raised in the Goulburn Division during 1933. This is the only production recorded since 1922.

(ii) *Queensland.* Extensive deposits of iron ore are known to exist in Queensland. Their location and size, however, in comparison with the more favourable deposits of South Australia, preclude their exploitation. In 1947, 1,342 tons of ore were obtained by the Queensland Cement & Lime Co. from their workings at Biggenden.

(iii) *South Australia.* The production from the deposits worked by the Broken Hill Pty. Co. Ltd., at Iron Knob and at Middlebank reached its maximum in 1939, when 2,571,759 tons of ore valued at £2,957,523 were raised. The production of 2,145,529 tons, valued at £2,467,396, for 1947, represents a decrease of 426,230 tons and £490,127 on the 1939 figures.

(iv) *Western Australia.* The development of the deposits at Yampi Sound was discontinued in 1938 as a result of the embargo on exports. However, in 1942, production of iron ore was reported for the first time since 1938; it amounted to 150 tons, valued at £225. Production in 1943 amounted to 84 tons valued at £128, but up to 1947 no further production had been recorded.

Australian Iron & Steel Co. Ltd., on behalf of Broken Hill Proprietary Co. Ltd. continued the development of the iron deposits on Cockatoo Island in Yampi Sound.

The production of pig-iron was commenced at Wundowie in Western Australia in January, 1948 under the direction of the State Department of Industrial Development. The ore used is obtained from the local deposits and converted to pig-iron by the use of charcoal burnt from timber obtained in the same locality. The production, which amounted to 771 tons for the six months ended June, 1948, is sufficient for local requirements and to provide a small quantity for export to the eastern States.

The production of pyrites from which sulphuric acid is obtained for the manufacture of superphosphate has shown a marked expansion in Western Australia. Since 1942, when production amounted to 368 tons, it has risen to 86,952 tons in 1947.

(v) *Tasmania.* There has been no production of ironstone in Tasmania since 1943 when 7 tons, valued at £14 were produced. The production of pyrites, which in 1947 amounted to 42,329 tons, valued at £59,260, is not included in the mineral returns, but is credited to the manufacturing industry, as it is a by-product from the flotation of copper ore at Mount Lyell. This product is exported to the mainland, where the sulphur contents have displaced imported sulphur in the manufacture of chemical fertilizers.

Reference to the iron ore deposits in the various States appears in preceding issues of the Official Year Book (*see* No. 22, pp. 777-9).

3. **Iron and Steel Bounties.**—During 1947-48 the bounties paid under the Bounties Acts on articles manufactured from locally produced materials were as follows:—Wire-netting, £321; traction engines, £19,978. Corresponding amounts paid during 1946-47 were £633 and £22,955 respectively.

4. **Production of Iron and Steel—Principal Countries.**—(i) *General.* Particulars of the production in the principal countries during the years 1938, 1946 and 1947 according to figures published by the Imperial Institute and the Statistical Office of the United Nations are shown in the next table.

PIG-IRON AND STEEL : PRODUCTION IN PRINCIPAL COUNTRIES.
(^{'000} Tons of 2,240 lb.)

(a) Not available.

(b) Year ended 30th June.

The principal producers in Australia are the Broken Hill Pty. Co. Ltd. and the Australian Iron and Steel Ltd., the former situated at Newcastle and the latter at Port Kembla in New South Wales. In South Australia, the Broken Hill Pty. Co. Ltd. established a blast furnace at Whyalla which was blown in during May, 1941, and has since continued to operate except for the periods May, 1944 to April, 1946 and April, 1949 to September, 1949.

In Western Australia, the production of pig-iron, under the direction of the State Department of Industrial Development, commenced in January, 1948 and, as previously mentioned, the output for the six months ended June, 1948 amounted to 771 tons.

(ii) *Australia.* The production of steel and pig-iron in Australia, of which New South Wales is the main producing State, is shown in the following table for each of the years 1938–39 to 1947–48.

PIG-IRON AND STEEL : AUSTRALIAN PRODUCTION.
(Tons.)

Year ended 30th June—	Pig-iron. (a)	Steel Ingots.	Blooms and Billets.	Year ended 30th June—	Pig-iron. (a)	Steel Ingots.	Blooms and Billets.
1939 ..	1,104,605	1,169,989	1,120,142	1944 ..	1,305,357	1,527,564	1,393,919
1940 ..	1,212,006	1,292,115	1,266,156	1945 ..	1,117,709	1,356,913	1,236,528

(a) Includes pig-iron for castings.

§ 8. Other Metallic Minerals.

1. **Wolfram and Scheelite.**—Tungsten ores occur in several of the States, in the Northern Territory and on King Island in Bass Strait, the last-named being included with Tasmania. Production during 1938 and the five years 1943 to 1947 is shown in the following table :—

WOLFRAM AND SCHEELITE : PRODUCTION.

(a) Concentrates.

2. **Cadmium and Cobalt.**—Cadmium is extracted at Risdon in Tasmania as a by-product from ores mined at Broken Hill in New South Wales, and on the west coast of Tasmania.

Cobalt as an oxide is recovered from the treatment of silver, lead and zinc ores of Broken Hill and Tasmanian origin in the same way as is cadmium. The production of cobalt and cadmium is shown for the years 1938 and 1943 to 1947 in the following table :—

CADMIUM AND COBALT: PRODUCTION.

Year.	Cadmium.				Cobalt Oxide.			
	Extracted in Tasmania from Ores mined in—				Extracted in Tasmania from Ores mined in—			
	New South Wales.	Tasmania.	Total.		New South Wales.	Tasmania.	Total.	
	Cwt.	Cwt.	Cwt.	£	Cwt.	Cwt.	Cwt.	£
1938	2,943	980	3,923	79,406	377	12	389	8,084
1943	2,344	807	3,151	70,609	274	13	287	6,604
1944	4,206	794	5,000	112,046	258	8	266	6,092
1945	3,818	588	4,406	98,671	274	5	279	6,427
1946	3,737	675	4,412	98,823	305	4	309	7,106
1947	3,076	691	3,767	84,335	239	4	243	5,102

The figures shown above do not include the metallic contents of cadmium and cobalt contained in the ores and concentrates exported overseas.

3. **Platinum and Platinoid Metals.**—(i) *Platinum.* (a) *New South Wales.* The deposits worked in the State are situated in the Ffield division, near Parkes, and in the Ballina division. The production in 1945 from all divisions amounted to 2 oz. valued at £22. The total production recorded to the end of 1945 amounted to 20,555 oz., valued at £130,667. There has been no production in New South Wales since that year.

(b) *Victoria.* In Gippsland the metal has been found in association with copper and 127 oz. were produced in 1913, but there has been no production in recent years.

(c) *Queensland.* Platinum, associated with osmiridium, has been found in the beach sands between Southport and Currumbin, in creeks on the Russell gold-field near Innisfail, and in alluvial deposits on the Gympie gold-field, but no production has been recorded.

(ii) *Osmium, Iridium, etc.* (a) *New South Wales.* Small quantities of osmium, iridium and rhodium are found in various localities. Platinum, associated with iridium and osmium, has been found in the washings from the Aberfoil River about 15 miles from Oban, on the beach sands of the northern coast, in the gem sands at Bingara, Mudgee, Bathurst and other places. In some cases, as for example in the beach sands of Ballina, the osmiridium and other platinoid metals amount to as much as 40 per cent. of the platinum, or about 28 per cent. of the whole metallic content. There was no production of these metals during 1947.

(b) *Victoria.* In Victoria, iridosmine has been found near Foster, and at Waratah Range, South Gippsland.

(c) *Tasmania.* The yield of osmiridium was returned as 99 oz. in 1947, valued at £2,700, compared with the record production in 1925 of 3,365 oz., valued at £103,570. The decrease in later years was largely due to the decline in price from £31 per oz. in 1925 to £15 os. 4d. per oz. in 1938 (although the price rose to £24 19s. 1d. per oz. in 1940 and reached £27 5s. 5d. in 1947), but the depletion of the known alluvial deposits was also a factor.

4. **Other.**—Detailed information in regard to occurrence and production of other metallic minerals in each of the States appears in Official Year Book No. 22, pp. 780-3 and in preceding issues.

§ 9. Coal.

1. **Production in each State.**—An account of the discovery of coal in each State appears in preceding issues of the Official Year Book (*see* No. 3, pp. 515-6). The quantity and value of the production in each State and in Australia during 1915, 1925, 1935, 1938 and for each of the years 1944 to 1948 are shown in the following table:—

BLACK COAL : PRODUCTION.

			1948 ..	6,692,291	1,187,715

(a) Cost of production.

2. **Distribution and Production of Coal in each State.**—(i) *New South Wales.* The coal deposits of New South Wales are the most important and extensively worked in Australia. The principal fields are known as the Northern, Southern and Western, and are situated at Newcastle, Bulli and Lithgow respectively.

The coal from the various districts differs considerably in quality—that from the Northern district being especially suitable for gas-making, household purposes and steam, while the product of the Southern and Western districts is essentially a steaming coal. The Greta coal seams in the Northern division are being worked extensively between West Maitland and Cessnock, and this stretch of country, covering a distance of 15 miles, is the most important coal-mining district in Australia.

The following table shows the yields in each of the three districts during the five years 1944 to 1948 compared with 1938. Separate details are given respecting coal won underground and from open cuts—

COAL : PRODUCTION IN DISTRICTS OF NEW SOUTH WALES.

District.	1938.	1944.	1945.	1946.	1947.	1948.(b)

(a) At the pit's mouth.

(b) Subject to revision.

The production of coal in New South Wales exceeded 10 million tons in each year from 1920 to 1927, the maximum annual production in this period being in 1924, when 11,618,000 tons were produced. Consequent upon the economic depression, production fell to 6,400,000 tons in 1931, but steadily increased each year to 10,051,519 tons in 1937. Production declined by 480,000 tons in 1938 but rose to 11,195,832 tons in 1939. A decrease of 1,646,000 tons in 1940 was followed in the next two years by increased production, the highest output yet recorded, namely, 12,205,035 tons, being registered in 1942. Production decreased during the next three years by 732,436, 430,560 and 866,685 tons respectively and stood at 10,176,254 tons in 1945. Since that year there has been an annual increase in production, the increases in 1946, 1947 and 1948 being 1,010,129, 496,740 and 38,000 tons respectively. Production of coal from open cuts, by which coal is won after the overburden has been removed, has expanded rapidly in recent years and in 1948 represented 10.7 per cent. of the total coal won. Of the total quantity of coal won in New South Wales since the commencement of operations to the end of 1948, namely, 535 million tons, about 363 million tons or 68 per cent. was obtained in the Northern District, 107 million tons or 20 per cent. in the Southern District, and 65 million tons or 12 per cent. in the Western District.

(ii) *Victoria.* (a) *Black Coal.* The deposits of black coal in Victoria occur in three main areas in the southern portion of the State, namely, the Wannon, the Otway and South Gippsland, which total approximately 3,500 square miles. The workable seams are restricted to the South Gippsland area, where the thickness ranges from 2 feet 3 inches to 6 feet. The total quantity of black coal mined in Victoria to the end of

1948 amounted to 20,548,741 tons, valued at £17,396,765. The record output, namely 703,828 tons, occurred in 1929 but production since that year has dropped considerably and in 1948 was only 167,540 tons.

The output of black coal in Victoria during each of the five years ended 1948 compared with 1938 was as follows :—

BLACK COAL : PRODUCTION IN VICTORIA.

Year.				State Coal- mine.	Other Coal- mines.	Total Production.	Total Value. (a)
				Tons.	Tons.	Tons.	£
1938	253,065	54,193	307,258	188,101
1944	224,313	33,379	257,692	407,793
1945	213,710	33,587	247,297	494,690
1946	169,650	21,640	191,290	392,812
1947	153,236	20,447	173,683	299,784
1948	145,880	21,660	167,540	347,687

(a) At the pit's mouth.

(b) *Brown Coal. General.* Victoria is richly endowed, both in quantity and quality, with brown coal deposits. Some account of these deposits and of the operations of the State Electricity Commission in connexion therewith will be found in preceding Official Year Books (see No. 22, p. 785). The brown coal produced in Victoria in 1947 amounted to 6,140,140 tons, all but 196,047 tons being procured at the State open cut at Yallourn. During 1947-48 6,192,336 tons of brown coal were produced by the State Electricity Commission, of which 3,763,828 tons went to the power station, 2,230,879 tons to the briquette factory and 197,629 tons to other factories for use as fuel.

Production of Briquettes. The briquetting plant of the State Electricity Commission started operations in November, 1924, and the output, which in 1926 was 95,477 tons, had increased to 180,905 tons in 1930 and to 545,236 in 1947-48. Two and a half tons of brown coal are required to make one ton of briquettes.

The table following shows the production and distribution of brown coal, and the production of briquettes in Victoria for the years 1943-44 to 1947-48, compared with 1938-39.

BROWN COAL : PRODUCTION AND UTILIZATION, VICTORIA.

('000 Tons.)

(iii) *Queensland.* The distribution of production during the years 1938 and 1944 to 1948 was as follows:—

COAL : PRODUCTION IN QUEENSLAND.

(Tons.)

District.	1938.	1944.	1945.	1946.	1947.	1948.
Ipswich	547,901	802,269	812,641	823,737	967,007	902,411
Bowen	224,778	316,016	292,043	234,512	267,417	238,487
Clermont	88,407	145,237	177,331	161,777	240,564	216,610
Maryborough ..	77,162	128,606	113,578	103,929	139,635	132,085
Darling Downs ..	76,571	126,950	112,666	107,555	123,758	117,277
Rockhampton ..	64,174	108,043	95,799	82,699	85,540	73,611
Chillagoe (Mount Mulligan) ..	19,192	18,961	19,960	22,193	23,907	18,670
Mount Morgan ..	13,698	13,593	10,728	31,118	35,586	43,245
Mackay	1,543
Total	1,113,426	1,659,675	1,634,746	1,567,520	1,883,414	1,742,396

The production of 1,883,414 tons in 1947 represents the highest annual production to date.

(iv) *South Australia.* The increasing demand for coal to meet the industrial expansion of South Australia has caused intensified efforts to develop the coal resources of the State so as to reduce, as far as possible, its dependence upon supplies from New South Wales. A new field of sub-bituminous coal was opened up at Leigh Creek, South Australia, in 1942 when 1,650 tons were produced. There was no production in 1943, but in 1944, 34,620 tons, valued at £12,117, were produced. Production has increased rapidly since that year and stood at 239,464 tons, valued at £119,732, in 1948.

Statistics published by the Department of Mines show that the quantities of Leigh Creek coal consumed in South Australia rose from 18,820 tons in 1944 to 34,208 tons in 1945, 68,925 tons in 1946, 128,963 tons in 1946-47 and 177,135 tons in 1947-48.

Details of production (which is by open-cut methods) and employment are given in the following table for the years 1944 to 1948.

COAL : PRODUCTION AND EMPLOYMENT IN SOUTH AUSTRALIA.

Year.				Production.	Value.	Numbers Employed.
				Tons.	£

1948	732,938	880,236	296	768	1,064

(vi) *Tasmania.* Details of the production of coal in Tasmania and the numbers employed are given in the following table for the years 1944 to 1948 compared with 1938. The chief source of coal supplies in this State is the Cornwall Coal Mine, situated on the east coast, which produced 94,219 tons in 1948 or 53 per cent. of the State's output.

Production in 1948, at 179,393 tons, exceeded the previous record of 167,140 tons in 1947.

COAL : PRODUCTION AND EMPLOYMENT IN TASMANIA.

Year.			Production.	Value.	Men employed.
			Tons.	£	
1938	83,753	61,991	269
1944	143,641	122,673	277
1945	149,077	125,719	279
1946	158,751	137,736	276
1947	167,140	154,725	288
1948	179,393	177,652	274

(vii) *Australia's Coal Reserves.* The latest available estimate of the actual and probable coal reserves of Australia is that prepared by the Coal and Lignites Panel of the Power Survey Sectional Committee of the Standards Association of Australia in May, 1950. The following table shows the actual and probable coal reserves as determined by that Committee :—

ACTUAL AND PROBABLE COAL RESERVES OF AUSTRALIA. ('000,000 Tons.)

State.					Anthracitic and Bituminous Coals.	Sub-bituminous and Lignite Coals.
New South Wales	11,770	100
Victoria	33	37,000
Queensland	2,000	67
South Australia	650
Western Australia	1,000
Tasmania	244	..
Total	(a) 14,000	(a) 39,000

(a) Rounded to nearest '000,000,000 tons.

3. **Production in Various Countries.**—The total known coal production of the world in 1947 amounted to about 1,628 million tons, towards which Australia contributed about 21 million tons, or about 1.3 per cent. The following tables show the production of the chief British and foreign countries during each of the three years 1945 to 1947 compared with 1938 :—

COAL : PRODUCTION IN BRITISH COUNTRIES.

(a) Not available.

(b) Estimated.

World production of coal amounted to 1,440 million tons in 1938 ; it rose to 1,770 million tons in 1943 but declined to 1,628 million tons in 1947. Of these quantities those produced in the British Commonwealth totalled 304 million or 21 per cent. in 1938, 286 million or 16 per cent. in 1943 and 288 million tons or 17.7 per cent. in 1947.

4. **Exports.**—(i) *General.* The quantity of coal of Australian production exported to other countries in 1947-48 was 67,228 tons, valued at £108,733, shipped mainly from New South Wales. These figures of overseas exports exclude bunker coal supplied to overseas vessels, which in 1947-48 amounted to 283,354 tons, valued at £597,559. The quantities and values of the overseas exports of Australian coal for the years specified are shown in the following table. Similar details for the coal taken for bunker purposes on overseas vessels are shown below in a separate table.

COAL : OVERSEA EXPORTS, AUSTRALIA.

(EXCLUDING BUNKER COAL).

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1913 ..	2,098,505	1,121,505	1944-45 ..	189,198	223,677
1921-22 ..	1,028,767	1,099,809	1945-46 ..	75,883	92,764
1931-32 ..	344,015	341,800	1946-47 ..	44,375	54,754

1947-48 ..	2,537	307	59	234	8,643	11,780

5. *Consumption in Australia.*—Details of the average annual production of coal and its distribution in Australia are given in the following table for the five years ended 1938-39 and 1946-47, together with similar details of production and distribution for the year 1947-48.

Under normal circumstances the production and consumption of coal move in the same direction, but in times of short supplies or abnormal consumption consumers may be compelled to rely upon accumulated stocks, and, consequently annual figures may move out of alignment. For this reason the following table has been prepared on a five-yearly basis in order to smooth out any variations from the normal.

COAL : PRODUCTION AND UTILIZATION IN AUSTRALIA.

(a) Estimated only.

(b) Estimated where details were not available.

(d) Includes bunker coal for interstate and intrastate shipping.

(c) Government Railways

(e) Not available.

The production of coal is ascertained only in calendar years and to relate it to the other data in the table above it has been necessary to estimate the output of black coal in annual periods ended June. Checks applied from other official sources confirm the reliability of these estimates.

6. **Coal Value at Pit's Mouth.**—(i) *New South Wales.* Particulars of the average value at the pit's mouth of the saleable output of coal for each district and for New South Wales as a whole are shown in the following table for the years 1938 and 1943 to 1947, according to figures compiled by the State Statistician. The figures relate to the pit head value (including subsidy).

**AVERAGE VALUE^(a) AT THE PIT'S MOUTH PER TON OF SALEABLE COAL^(b) :
NEW SOUTH WALES.**

(s. d.)

Year.	Northern District.	Southern District.	Western District.	Average for State.
1938	12 0	14 0	9 6	12 0
1943	16 10	20 1	14 9	17 2
1944	17 7	21 2	15 0	17 10
1945	18 7	21 11	15 4	18 7
1946	18 8	23 1	15 7	18 10
1947	20 11	23 11	16 10	20 9

(a) Including subsidy from 1943. (b) "Saleable" output represents "gross" output less coal used in operating the mines and miner's coal.

(ii) *Victoria.* The average value per ton at the pit's mouth of black coal produced in Victoria was as follows :—1938, 12s. 3d.; 1943, 27s. 5d.; 1944, 29s. 3d.; 1945, 37s. 11d.; 1946, 40s. 5d.; and 1947, 33s. 2d.

The figures shown above exclude Victorian brown coal which in 1947 cost 3s. 1d. per ton to produce.

(iii) *Queensland.* Average values in the principal coal-producing districts during the years 1938 and 1943 to 1947 were as follows :—

AVERAGE VALUE PER TON OF COAL AT PIT'S MOUTH : QUEENSLAND.

(s. d.)

District.	1938.	1943.	1944.	1945.	1946.	1947.
Ipswich	17 0	21 0	21 2	21 3	21 3	23 4
Darling Downs	19 11	24 7	24 6	24 9	24 6	26 5
Wide Bay and Maryborough	24 0	28 8	28 9	28 8	29 0	33 0
Rockhampton	17 0	20 2	19 9	21 8	19 11	21 10
Clermont	13 8	16 8	16 6	16 5	16 4	17 4
Bowen	14 10	20 7	20 5	20 5	21 2	24 6
Chillagoe (Mount Mulligan) ..	31 6	34 1	34 1	34 8	35 2	38 2
Average for State ..	17 2	21 6	21 6	21 6	21 7	23 10

(iv) *South Australia.* The cost of production of black coal (sub-bituminous) was 7s. per ton in 1947.

(v) *Western Australia.* The average value per ton of Collie coal at pit's mouth was as follows :—1938, 12s. 5d.; 1943, 18s. 5d.; 1944, 20s. 6d.; 1945, 21s. 1d.; 1946, 22s. 9d.; and 1947, 25d. 10d.

(vi) *Tasmania.* The average value per ton of coal at the pit's mouth in Tasmania for the five years ended 1947 was :—1943, 16s. 1d.; 1944, 17s. 0d.; 1945, 16s. 10d.; 1946, 17s. 5d.; and 1947, 18s. 6d.; compared with 14s. 10d. in 1938.

7. Prices in New South Wales, Great Britain, Canada and the United States of America.—In the following table the prices of coal in Canada and the United States of are compared with the average value per ton of coal in New South Wales and Great Britain.

AVERAGE PRICES OF COAL PER TON: NEW SOUTH WALES, GREAT BRITAIN, CANADA AND UNITED STATES OF AMERICA.

Country.	1938.	1942.	1943.	1944.	1945.	1946.	1947.	1948.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
New South Wales (a) ..	12 0	16 1	17 2	17 10	18 7	18 10	20 9	25 8
Great Britain (b) ..	16 8	24 1	27 3	31 3	35 0	36 10	40 3	47 2½
Canada—Bituminous (c) ..	5.417	5.700	5.700	6.650	6.788	6.980	6.980	6.980
United States of America— Bituminous (d) ..	4.327	4.782	5.045	5.239	6.356	5.776	6.873	(e) 8,118

(a) Average pit head value per ton of 2,240 lb.; the figures relate to saleable coal and include subsidy from 1943. (b) Average value at the mine per ton of 2,240 lb., in sterling. (c) Wholesale price in Canadian currency per ton of 2,000 lb. (d) Wholesale price in United States of America currency per ton of 2,000 lb. (e) Average for nine months, March to November.

8. Employment in Coal-mines.—The number of persons employed, both above and below ground, in coal-mines in each of the producing States is given for selected years from 1915 and for each of the five years ended 1947:—

COAL-MINES: PERSONS EMPLOYED.

Year.	New South Wales.	Victoria.		Queensland.	South Australia.	Western Australia.	Tasmania.	Total.
		Black.	Brown.					
1915	17,959	1,312	(a)	2,518	..	498	161	22,448
1925	24,049	1,947	646	2,826	..	677	312	30,457
1935	13,337	1,397	615	2,455	..	689	340	18,833
1938	15,815	1,322	444	2,495	..	705	269	21,110
1943	17,497	1,203	630	2,808	..	838	278	23,344
1944	17,468	1,196	613	2,978	91	880	277	23,503
1945	17,427	1,016	584	2,966	100	860	270	23,232
1946	17,448	924	655	2,641	121	955	276	23,020
1947	17,614	860	594	3,337	124	1,032	288	23,849

(a) Included with black coal: production prior to 1925 was of little significance.

The year of maximum employment was 1926 when 31,774 persons were engaged in the coal-mines of Australia. Shortly after that year the industrial depression and a prolonged stoppage of work on one of the principal fields of New South Wales during 1929 and 1930 seriously affected the figures of employment. Since 1933 there has been a gradual increase, but the numbers employed in 1947 were only about three-quarters of the maximum figure already quoted. In New South Wales in 1939, 3,594,000 tons of coal, or 32.1 per cent. of the total output of underground coal, was cut by machinery, compared with 4,418,000 tons or 38.7 per cent. in 1943, 4,099,000 tons or 37.7 per cent. in 1944, 3,561,000 tons or 36.9 per cent. in 1945, 3,819,000 tons or 36.6 per cent. in 1946 and 4,150,000 tons or 38.7 per cent. in 1947. Similar details for other States are not available.

9. Accidents in Coal-mining.—The following table gives the number of persons killed or injured in the coal-mining industry in Australia during 1947, with the proportion per 1,000 employed, and in relation to the quantity of coal raised, a factor which must be reckoned with in any consideration of the degree of risk attending mining operations. Although no precise definition of an accident is available, any disablement from misadventure which rendered the injured unfit for work for fourteen days or more appears to have been uniformly adopted by the State Departments of Mines.

COAL-MINING : EMPLOYMENT AND ACCIDENTS, 1947.

State.	Persons Employed in Coal-mining.	No. of Persons.		Proportion per 1,000 Employed.		Tons of Coal raised for each Person—	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
New South Wales ..	17,614	(a) 16	(a) 82	0.91	4.66	730,195	142,477

Western Australia ..	1,032	..	281	..	272.29	..	2,600
Tasmania ..	288	..	4	..	13.89	..	41,785
Total ..	23,849	20	584	0.86	20.29	1,048,570	35,910

(a) Includes shale.

(b) Includes brown coal.

The next table shows for the five-yearly period 1943 to 1947 annual averages respecting the number employed in mining and the number of fatalities, and the rate of fatalities per 1,000 employed.

COAL-MINING : AVERAGE ANNUAL FATALITIES, 1943 TO 1947.

State.	Average No. of Coal-miners Employed.		Average Annual No. of Fatal Accidents.	Rate per 1,000 Employed.
New South Wales	17,491	18	1.03
Victoria	1,655	2	1.21
Queensland	2,964	4	1.35
South Australia	87
Western Australia	913	1	1.10
Tasmania	280
Total	23,390	25	1.07

10. Commonwealth Board of Inquiry into the Coal-mining Industry.—Reference to the appointment in 1945 of the Commonwealth Board of Inquiry, its terms of reference and the report issued in 1946 is given in Official Year Book No. 37, page 842.

11. Joint Coal Board.—(i) *General*. Under war-time emergency legislation, the Commonwealth had wide powers to control the production, distribution and price of coal in Australia. Under peace-time conditions, however, the constitutional powers of the Commonwealth were less effective and in order to ensure the maintenance of supplies of coal to meet the peace-time needs of industry it was necessary to seek wider powers.

With this objective in view, the Governments of the Commonwealth and New South Wales, the chief coal-producing State, mutually agreed to create jointly an authority with powers similar to and in some respects wider than those possessed under Commonwealth war-time legislation. Following this agreement, the Joint Coal Board was created and has functioned as from 1st March, 1947.

(ii) *Constitution*. The legislative authority of the Joint Coal Board is contained in the Coal Industry Act No. 40 of 1946 passed by the Commonwealth Parliament and in the Coal Industry Act No. 44 of 1946 passed by the Parliament of New South Wales. Both Acts are identical for all practical purposes except that the New South Wales Act granted to the Board powers to control collieries and compulsorily to requisition and resume land, buildings, plant, machinery and equipment.

(iii) *Powers.* Under Section 14 of the Commonwealth Act and Section 11 of the New South Wales Act, the powers and functions of the Board are stated to include the taking of such action as is necessary or desirable—(a) to ensure that coal is produced in the State in such quantities and with such regularity as will meet requirements throughout Australia and in trade with other countries; (b) to ensure that the coal resources of the State are conserved, developed, worked and used to the best advantage in the public interest; (c) to ensure that coal produced in the State is distributed and used in such manner, quantities, classes and grades and at such prices as are calculated best to serve the public interest and secure the economical use of coal and the maintenance of essential services and industrial activities; and (d) to promote the welfare of workers engaged in the coal industry in the State. In addition the Board has full power with regard to health matters but does not exercise any basic responsibilities as regards safety measures or inspection of mines; these duties remain the responsibility of the New South Wales Department of Mines.

§ 10. Coke.

1. *General.*—The production of coke in Australia was limited to about 250,000 tons per annum prior to the 1914-18 War. This was below local requirements and necessitated an annual import of about 27,000 tons from abroad. By 1920, production had risen to more than 500,000 tons and by 1938-39 it exceeded 1,000,000 tons. This increased production permitted an export of 30,000 tons in 1938-39. Imports in the same year were 9,700 tons. In 1947-48 the quantity exported was 9,434 tons, valued at £39,041, of which 5,394 tons, valued at £16,847, went to New Caledonia and 3,269 tons, valued at £17,118, to New Zealand. In 1947-48, South Australia imported 862 tons of coke valued at £6,414 from the Union of South Africa.

2. *Production at Coke Works.*—(i) *New South Wales.* The following table shows the production in New South Wales during 1938 and each of the five years 1943 to 1947, as recorded by the Department of Mines:—

COKE : PRODUCTION IN COKE WORKS, NEW SOUTH WALES.

Items.	1938.	1943.	1944.	1945.	1946.	1947.
Quantity tons	1,135,446	1,567,172	1,380,158	1,045,049	1,052,303	1,302,145
Value, total £	1,100,266	2,400,993	2,235,700	1,950,032	1,898,094	2,675,423
Value, per ton ..	19s. 5d.	£1 10s. 8d.	£1 12s. 5d.	£1 17s. 4d.	£1 16s. 1d.	£2 1s. 1d.

(ii) *Queensland* A small quantity of coke is made in Queensland, the quantity returned in 1938 being 30,984 tons, of which 27,328 tons were produced at the Bowen State Coke Works. The greater proportion of the output of these works was consigned to the Mount Isa Mines Ltd. and to the Chillagoe State smelters. Hitherto the coke used at these ore-treatment works was imported from New South Wales, but now the local output is sufficient to meet the requirements of the State and leave a small surplus available for export. The following table shows the amount manufactured at the State Coke Works during the five years ended 1947-48, compared with 1938-39.

COKE : PRODUCTION IN STATE COKE WORKS, QUEENSLAND.

Year.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Quantity tons	26,032	9,347	13,181	11,591	12,574	14,880

In order to avoid duplication with coal values, the returns for coke have not been included in the general tables of mineral production in the early part of this chapter.

3. **Total Production, Australia.**—The production of coke in New South Wales and Queensland referred to above relates to the product of coke ovens only and excludes coke produced at gas works. In the following table, however, particulars of the total production of coke in Australia are shown together with the quantities produced at coke works and gas works respectively.

TOTAL COKE PRODUCTION : AUSTRALIA.

(Tons.)

Industry.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

§ 12. Shale-oil and Mineral Oil.

1. **Shale-oil.**—(i) *General.* Reference to the deposits of shale and the search for mineral oil in Australia will be found in Official Year Book No. 22, pp. 791-3.

(ii) *New South Wales.* Reference to the establishment of the shale-oil industry in Australia will be found in previous issues of the Official Year Book. In 1937 negotiations were completed between the Commonwealth and New South Wales Governments and the National Oil Proprietary Ltd., by which the latter company undertook to develop the shale-oil industry in the Newnes-Capertee district. The Commonwealth Government agreed to protect the industry by exempting from excise, up to 10 million gallons annually, the Company's output of petrol for a period of 25 years. The successful

establishment of this plant would lead to an expansion of the industry in Australia and should provide a valuable training ground for technicians. Production of crude oil commenced at Glen Davis near Newnes in 1940 and the installation of a new processing plant enabled 3,696,981 gallons of petrol to be produced in 1946 and 4,063,628 gallons in 1947 compared with 1,043,821 gallons in 1944 and 1,979,511 gallons in 1945. In 1947 the yield of crude oil per ton of shale processed was 51 gallons. The following table shows the production of oil shale during the years 1943 to 1947 compared with 1940 :—

OIL SHALE : PRODUCTION IN NEW SOUTH WALES.

Year.	Northern District.		Southern District.		Western District.		Total	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£	Tons.	£
1940	43,805	43,805	43,805	43,805
1943 ..	4,033	6,377	112,842	153,838	116,875	160,215
1944 ..	3,047	8,827	134,411	156,458	137,458	165,285
1945	123,170	164,648	123,170	164,648
1946	121,654	139,902	121,654	139,902
1947	138,427	193,798	138,427	193,798

(iii) *Tasmania*. About 38,000 gallons of crude oil were produced in 1934 from shale treated in Tasmania, while the total quantity of oil distilled from shale up to the end of 1934 was set down at 357,000 gallons. The plant owned by the Tasmanite Shale Oil Company has not operated since the end of January, 1935.

Interest in the commercial utilization of oil shales of the Mersey Valley for the extraction of fuel oils has been retarded due to structural and physical conditions for underground mining and the low-grade nature of the shale.

2. *Coal Oil*.—Reference to investigations made into the possibility of establishing plants for the production of oil from coal is made in previous issues of the Official Year Book.

3. *Natural Oil*.—(i) *Australia*. Natural oil has been proved to exist in Queensland, Victoria and Western Australia, the best indications being found in Victoria and Queensland. Many of the conditions favourable to the accumulation of oil in commercial quantities have been shown to be present in Queensland, Western Australia and New South Wales. In the latter State, however, no strong positive evidence of its existence has been recorded. Oil has been proved to occur in noteworthy quantities at Lakes Entrance, Victoria, but it still remains to be demonstrated whether the area can be developed on a commercial basis.

Reference is made in § 16 below to the assistance afforded by the Commonwealth Government in the search for petroleum oil.

(ii) *Victoria*. There has been no production of crude petroleum oil in Victoria since 1940. The total production to the end of that year was 115,283 gallons, valued at £2,769. Two experts who were engaged by the Commonwealth Government to investigate the oil-producing area of Gippsland expressed the opinion that production on a commercial scale could be established and drilling has been continued in this area since 1941 in accordance with their recommendations. Boring for oil in the Nelson area was carried out during the years 1942 to 1945.

(iii) *Queensland*. Great hopes are still entertained in regard to the petroliferous area in Queensland. Gas and light to medium gravity oils have been found at Roma, and gas and oily wax at Longreach. Structural conditions favourable to accumulation

on a commercial scale have been located at several places between Injune and Springsure. The search for oil was continued during 1939 by several companies in localities situated at Mount Bassett, near Roma, at Hutton Creek and at Arcadia. Test bores have been drilled in all the localities mentioned, the deepest being that at Arcadia which exceeded 6,000 feet. Showings of petroliferous gas, amounting at Arcadia to 3,000,000 cubic feet a day, and of petroleum have been encountered in all these bore-holes.

During 1947 geological, geophysical and aerial surveys were undertaken in the south-western areas, in central Queensland and in the Roma area by various companies, but no drilling was done.

(iv) *South Australia.* Under prescribed conditions, the South Australian Government offers a bonus of £5,000 to the person or body corporate which first obtains from a local bore or well 100,000 gallons of crude petroleum containing not less than 90 per cent. of products obtainable by distillation.

Geophysical surveys were undertaken by private interests during 1947 and continued into 1948, in the north-east corner of the State and extending over the border into New South Wales and Queensland. Assistance given by the Commonwealth included equipment and a geophysical survey party.

(v) *Western Australia.* Only one company was active in Western Australia during 1939. The company, financially assisted by the Commonwealth and State Governments, commenced deep-drilling operations in the Kimberley district in 1939. During 1947 the Geological Survey of Western Australia authorized participation in the oil survey of the Fitzroy Basin, West Kimberley District, in conjunction with the Mineral Resources Bureau. No production had been recorded up to the end of 1947.

(vi) *General.* During 1939 efforts were made to secure greater uniformity in State legislation governing the search for oil. A draft Bill based on modern legislation in other countries was prepared by the Commonwealth and submitted to the State Governments. As a result amending legislation was passed in Victoria, Queensland, South Australia and Western Australia. There was immediate response to this in Queensland, where an agreement has been reached between the State Government and one of the major oil companies, whereby the company has undertaken to spend up to £400,000 in the search for oil in that State.

Further details of action taken by the Commonwealth Government in connexion with the search for oil will be found in § 16. "Government Aid to Mining".

§ 13. Other Non-metallic Minerals.

A more or less detailed statement regarding the occurrence and production of other non-metallic minerals is given in preceding issues of the Official Year Book (*see* No. 22, pp. 793-6). The tables of quantities and values in § 1 of this Chapter show the production of the principal items in this class for each State during 1947.

§ 14. Gems and Gemstones.

1. *Diamonds.*—It is difficult to secure accurate returns in connexion with the production of precious stones, but the yield of diamonds in 1947 in New South Wales was estimated at 73 carats, valued at £215. These were won by fossickers in the Inverell district. The total production to the end of 1947 is given at 206,952 carats, valued at £150,799.

2. **Sapphires.**—The production of sapphires in New South Wales during 1929 was returned as 65 oz., valued at £450, obtained wholly at Sapphire in the Inverell district, and the only output recorded since that year was 1,200 oz., valued at £600, in 1941; 248 oz., valued at £124, in 1943; 125 oz., valued at £283, in 1945; 1,838 oz., valued at £908, in 1946; and 510 oz., valued at £570, in 1947.

In Queensland, gems to the value of £3,540 were won in 1947. It is probable that many gems were sold privately or held for better prices and for these reasons the returns are considered to be very incomplete. There were about 120 miners operating on the fields during 1934 but only 28 at the end of 1947. Production has declined very considerably since 1920, when the yield was valued at £66,000.

3. **Precious Opal.**—The estimated value of the opal won in New South Wales during 1947 was £1,000. This is not regarded as the total output of the State, however, because in many instances miners, buyers and collectors leave the fields before a record of their production or purchases can be secured. Some very fine stones are at times obtained, one weighing 5 ozs. and valued at £300 being found in 1911. Three finds of large stone were made in 1928, the gems weighing 790, 590 and 232 carats respectively and showing fine fire and lustre. Occasionally black opals of very fine quality are found, one specimen from the Wallungulla field, weighing 6½ carats, being sold in 1910 for £102, while in the early part of 1920 a specimen realized £600. It is stated that this locality is the only place in the world where the "black" variety of the gem has been found. The total value of opal won in New South Wales since 1890 is estimated at £1,643,476, but, as pointed out above, the figures are to some extent understated.

In Victoria small quantities of precious opal are found in the Beechworth district.

The opaliferous district in Queensland stretches over a considerable area of the western interior of the State, from Kynuna and Opalton as far south as Cunnamulla. The yield in 1947 was estimated at £307, and up to the end of that year, at about £188,000. These figures are, however, merely approximations, as large quantities of opal, of which no record is obtained, are disposed of privately. The greatest recorded output was for the year 1895 when the yield was valued at £32,750.

Owing to the poor market for gems, production from the Coober Pedy opal field, situated in the Stuart Range in South Australia, fell from £11,056 in 1929 to £1,517 in 1934. The production rose in 1937 to £11,887, but declined to £6,020 in 1939, and rose again to £11,568 in 1941. After a further drop in 1942, to less than £6,000, the value of production rose in 1947 to £61,569, the greatest annual production ever recorded. The field is extremely prolific, a large quantity of precious white opal having been raised therefrom, and only a small portion of the known opal-bearing area has been thoroughly tested.

4. **Other Gems.**—Various other gems and precious stones have from time to time been discovered in the different States, the list including agates, amethysts, beryls, chialstolite, emeralds, garnets, moonstones, olivines, rubies, topazes, tourmalines, turquoises and zircons. In Western Australia, 609 carats (rough) of emeralds, valued at £278 were produced during 1929 in the Cue district on the Murchison gold-field. The value of the 3,750 carats reported from the same area in 1930 was not ascertainable as there were no sales during the year. There has been no recorded production since 1930. During the three years 1939, 1940 and 1941, 10 tons of beryl ore, valued at £83, were produced in Western Australia. There was no production in 1942, but since that year 515 tons, valued at £14,504, were produced in 1943; 387 tons, valued at £12,602, in 1944; 34 tons, valued at £952, in 1945; 15 tons, valued at £581, in 1946; and 45 tons, valued at £1,525, in 1947. Beryl is required chiefly for special alloys with copper which are used in the manufacture of castings, non-sparking tools and special diamond-drill bits.

§ 15. Number Engaged, Wages Paid and Accidents in Mining.

1. Total Employment in Mining.—The number of persons engaged in the mining industry in Australia fluctuates according to the season, the price of industrial metals, the state of the labour market, and according to the permanence of new finds and the development of the established mines. During 1947 the number so engaged was as follows :—

NUMBER OF PERSONS ENGAGED IN MINING, 1947.

State.	Number of Persons engaged in Mining for—						Total.
	Gold.	Silver, Lead and Zinc.	Copper.	Tin.	Coal.	Other.	
New South Wales ..	795	5,331	184	523	17,614	1,555	26,002
Victoria ..	1,135	1,454	61	2,650
Queensland ..	1,834	994	48	528	3,337	283	7,024
South Australia ..	50	12	124	1,057	1,243
Western Australia ..	7,649	..	2	9	1,032	563	9,255
Tasmania ..	14	523	733	627	288	214	2,399
Northern Territory ..	176	2	15	52	..	174	419
Australia ..	11,653	6,862	982	1,739	23,849	3,907	48,992

(a) Includes 594 engaged in mining for brown coal.

Included in the figures for "other" in South Australia were 188 engaged in mining iron ore, 86 gypsum miners, 207 salt gatherers, and 240 opal miners. The Tasmanian figures include 154 scheelite miners and 14 osmiridium miners. The Northern Territory figures include 92 wolfram and 72 mica miners.

The following table shows, at intervals since 1911, the number of persons engaged in mining in each State and the proportion so engaged of the total population :—

NUMBER ENGAGED IN MINING PER 100,000 OF POPULATION.

State.	1911.		1921.		1931.	
	Miners engaged.	No. per 100,000 of Popu- lation.	Miners engaged.	No. per 100,000 of Popu- lation.	Miners engaged.	No. per 100,000 of Popu- lation.
New South Wales ..	37,017	2,225	29,701	1,410	30,682	1,200
Victoria ..	15,986	1,210	5,211	339	6,463	359
Queensland ..	13,201	2,147	5,847	766	6,753	730
South Australia ..	6,000	1,457	2,020	406	518	90
Western Australia ..	16,596	5,787	7,084	2,122	7,147	1,653
Tasmania ..	5,247	2,760	3,170	1,486	3,397	1,512
Northern Territory ..	715	21,595	131	3,356	145	2,918
Australia ..	94,762	2,109	53,164	974	55,105	844

NUMBER ENGAGED IN MINING PER 100,000 OF POPULATION—*continued.*

State.	1941.		1946.		1947.	
	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.
New South Wales ..	27,554	984	25,082	852	26,002	871
Victoria ..	4,839	250	2,919	144	2,650	129
Queensland ..	6,541	631	6,056	555	7,024	635
South Australia ..	928	154	1,031	162	1,243	192
Western Australia ..	14,021	2,958	8,567	1,739	9,255	1,840
Tasmania ..	2,974	1,237	2,385	946	2,309	931
Northern Territory ..	424	4,125	322	3,047	419	3,847
Australia ..	57,281	806	46,362	621	48,992	646

The upward movement in the number of miners engaged which commenced in 1930 reached a peak of 998 per 100,000 of population in 1937 but from that year until 1945 the ratio declined as follows:—1938, 957; 1939, 944; 1940, 880; 1941, 806; 1942, 696; 1943, 636; 1944, 601; 1945, 569. Since the end of the 1939-45 War the ratio has increased to 621 in 1946 and 646 in 1947.

2. **Wages Paid in Mining.**—Information regarding rates of wages paid in the mining industry is shown in the *Labour Report* issued by this Bureau.

3. **Accidents in Mining, 1947.**—The following table gives particulars of the number of men killed or injured in mining accidents during 1947:—

MINING ACCIDENTS, 1947.

(d) Gold and

§ 16. Government Aid to Mining, and Mineral Control.

1. **Aid to Mining.**—(i) *Commonwealth.* (a) *General.* The Precious Metals Act 1926, the Gold Bounty Act 1930, the Loan Appropriation (Unemployment Relief) Act 1934, the Northern Australian Survey Act 1934 and the Gold Mining Encouragement Act 1940, mentioned in the previous issue of the Official Year Book, either have become inoperative or have been superseded. The Petroleum Oil Search Act 1936 is still in force. Further expenditure under the Gold Mining Encouragement Act is not contemplated, as an entirely new method of providing financial assistance to the mining industry is in operation, and is described below. Similarly no further expenditure is contemplated under the Petroleum Oil Search Act 1936, except for two projects not yet completed, and the Government policy now is to conduct geological and geophysical surveys of possible oil fields (*see below*).

Applications for financial assistance for the development of mining projects which offer promise of contributing materially to the economic welfare of the Commonwealth may be considered by the Bureau of Mineral Resources and the Treasury after consultation with the State concerned. This policy supersedes that set out in Official Year Book No. 37, page 849—the Australian Mining Council which was to have been set up under the previous policy has not met or fulfilled any of its functions and its creation was not finalized.

The Commonwealth Government in 1948 decided to provide financial assistance to certain gold mines in remote and isolated parts of Western Australia. These mines were experiencing difficulty because income from the fixed price for gold was insufficient to cover higher operating costs due to a number of factors, including the general rise in the level of wages and prices. Before granting assistance, the mine, its financial position and its relation to the economic and social welfare of the district were investigated by officers of the Bureau of Mineral Resources and the Treasury in collaboration with the State Mines Department, and conditions which should be observed in order to obtain financial assistance were laid down. Assistance as decided in 1948 was in the form of periodical payments sufficient to cover the difference between revenue and expenditure and to provide a return of 4 per cent. on the paid-up capital of the Company, but in 1949 this was increased to 6 per cent. At the same time the assistance scheme was extended to enable gold mines in remote areas of other States to participate. The scheme was terminated on the devaluation in September, 1949 of the Australian pound in terms of the United States of America dollar, which had resulted in a rise of £4 14s. 7d. per fine ounce in the Australian price of gold.

(b) *Rewards for discovery of Uranium Ore.* To encourage the search for and discovery of deposits of uranium ore, the Commonwealth Government has approved the granting of monetary rewards. These rewards will be paid as follows:—(1) £1,000 for the discovery of a deposit containing sufficient ore to be of economic importance; (2) £1,000 for the discovery of a deposit capable of producing 25 tons or more of uranium oxide and £2,000 for any excess over 25 tons; and (3) a maximum of £25,000 for any one deposit.

(c) *Bureau of Mineral Resources.* The Bureau of Mineral Resources, Geology and Geophysics has sections dealing with geology and geophysics, mining engineering, petroleum technology and mineral economics. The geological section conducts all surveys required in Commonwealth Territories, detailed and regional surveys in conjunction with or by arrangement with the State Mines Departments, surveys of possible oil-fields in Australia and New Guinea, surveys of mines for which financial assistance is sought, and investigations of deposits of radio-active minerals. The geophysical section conducts investigations connected with the search for metalliferous, radio-active and other mineral deposits; problems connected with exploration of coal, oil and water; regional magnetic and gravity surveys; and engineering and military geophysics. The Bureau works in close co-operation with the Mines Departments of the States. The Bureau has assumed full responsibility for geological and geophysical surveys in Commonwealth Territories, but suitable arrangements have been made to ensure that the local Administrations have the necessary technical advice directly available to them.

(d) *Diamond Drills.* The four diamond drills mentioned in the previous Official Year Book have arrived in Australia and are available for hire by mining companies.

(e) *Search for Oil.* No variation has been made in the policy described in Official Year Book No. 37, page 850, regarding the search for petroleum throughout Australia and its Territories. In addition to the activities of the Bureau of Mineral Resources, Geology and Geophysics set out in that Year Book, it furnishes field laboratories and trained personnel to assist small companies in recording scientific information obtained while drilling for oil.

The Commonwealth Government has encouraged the search for oil in Australia, Papua and New Guinea; details of the efforts made are outlined in previous issues of the Official Year Book. A considerable amount of geological work and test drilling was conducted under the provision of the Petroleum Oil Search Act 1936 and, at the outbreak of the 1939-45 War, two tests were partially completed, one at Oiapu in the Gulf district of Papua and the other at Nerrima in the Kimberley district of Western Australia. At Nerrima, the Freney Kimberley Oil Co. (1932) N.L. rejected a Commonwealth offer of financial assistance. The company is now drilling with financial assistance from the Government of Western Australia, using a drilling plant hired from the Commonwealth; technical advice and assistance is also provided by the Commonwealth.

(f) *Survey of North Australia.* Reference to this survey which was completed at the end of 1940 appears in Official Year Book No. 35, page 744. A few reports on individual areas remain to be printed.

(g) *Mining Industry Advisory Panel.* This panel has not functioned since 1946. During the year, the Bureau of Mineral Resources continued the investigation, recommended by the Panel, into the possibility of arranging uniform legislation in the States and Territories in connexion with health and safety in mines.

(h) *Standing Committee on Liquid Fuels.* This Committee has become inoperative.

(i) *Ore-dressing and mineragraphic investigations.* These investigations are conducted by the Commonwealth Scientific and Industrial Research Organization as required by the industry. Ore-dressing investigations are carried out conjointly with appropriate State institutions, the three laboratory centres being the School of Mines, Kalgoorlie, the School of Mines and Industries, Adelaide, and the University of Melbourne.

The grant of £22,000 mentioned in Official Year Book No. 37, page 851, was expended by 1947; since that year funds to continue the investigations are included in an investigational vote approved annually for the Commonwealth Scientific and Industrial Research Organization. In 1948 the Government expended approximately £5,000 on ore-dressing and £6,100 on mineragraphic investigations.

(ii) *States.* (a) *General.* In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining industry where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

(b) *New South Wales.* State aid to assist metalliferous mining consisted of grants to assist the prospecting and/or mining for gold and minerals and for the purchase, removal and installation of mining plant or equipment. In 1948, this assistance totalled £4,705, the greater part of which was granted to prospect or mine for either tin or gold.

(c) *Victoria.* In 1948, £5,368 was granted by the State to assist the gold-mining industry. Grants may be made to assist prospecting and development or the purchase of machinery. The Mines Department has 24 stamp batteries in different parts of the State to crush ore for prospectors at nominal rates. Small mining companies may avail themselves of these facilities.

(d) *Queensland.* The Mines Department maintains a treatment works for tin ores, etc. at Irvinebank, an assay office at Cloneerry and diamond-drilling plants in several parts of the State. The Venus State Mill at Charters Towers is available for

the treatment of gold-bearing ores and another State battery is located at Kidston. In addition, many departmental compressor plants, pumping plants and other mining equipment are provided and made available on hire on the principal mining fields. Financial aid granted to prospectors for 1948 amounted to £11,695, whilst other forms of aid for mining granted by the State amounted to £7,505 for the same period.

(e) *South Australia.* During 1940 the Premier announced that assistance would be given to copper mining in the form of financial help towards such development work as was absolutely necessary for the mine to enter upon reasonably continuous production. On 5th November, 1942, the Leigh Creek Coal Act was passed to develop the Leigh Creek Coalfield. As a result of extensive drilling operations, development of open-cut mining was commenced in January, 1943. Production from the open-cuts to December, 1948 amounted to 645,997 tons. State aid to mining during 1948 totalled £58,567, of which £11,350 was for coal, £4,304 for copper, £6,285 for gold, and the balance, £36,628, for other minerals. The State maintains batteries and cyanide works at Mount Torrens, Peterborough, Mongolatta, Tarcoola, and Glenloth, and assays for public purposes are made at the School of Mines.

(f) *Western Australia.* Financial aid granted to prospectors and others in 1948 amounted to £40,799; this sum was allotted as follows:—oil, £15,000; lead, £10,000; gold, £4,049; coal, £1,199; vermiculite, £656; tin, £139; other forms of assistance, £9,756. The Mines Department has about twenty batteries throughout the mining fields where prospectors and others can have their ore treated.

(g) *Tasmania.* During 1948 the Department of Mines reported that the policy of assistance to mining was maintained to the extent provided for under the provisions of the Aid to Mining Act but no material advantage was taken thereof. In that year £75 was expended and £493 was repaid against advances previously made.

Other assistance rendered to the industry is provided by a well-equipped metallurgical laboratory at Launceston where ore-dressing and other metallurgical problems can be investigated for the mine-owner and advice given regarding the most suitable type of plant to instal.

(h) *Northern Territory.* The Commonwealth Government has maintained a 10-head battery at Tennant Creek for the treatment of ore by miners. Another battery has been leased. A 10-head battery is situated on the Maranboy tin-field and crushes ore for all parties on the field. Assistance has been given to miners on the mica fields to purchase air-compressors and other mining plant on liberal terms. The Commonwealth Government has purchased all mica produced on the fields. Roads and water supply services are provided and maintained for all mines and mineral-producing areas throughout the Territory.

2. **Control of Minerals.**—(i) *Minerals Committee, and Controller of Minerals Production.* With the termination of the war the activities of the Controller of Minerals Production, appointed under the provision of the National Security (Minerals) Regulations, were reduced. In 1948, operations conducted by the Controller were the Dorset Tin Dredge in Tasmania and the acquisition and sale of mica produced in Australia.

(ii) *Mica Production.* The Commonwealth Government extended to 31st December, 1949, its authority to acquire the mica produced in Australia at a price fixed by the Prices Commissioner.

(iii) *Control of Exports of Metals and Minerals.* In order to conserve supplies and to direct surpluses to destinations where most needed, export controls were initiated in 1946. Metals, etc., controlled include copper and copper alloys; iron, steel and scrap; all non-ferrous scrap; zinc dross and dust; antimony metal and concentrates; metallic tin, tin concentrates and ores; and pig lead and scrap and manufactured lead.

(iv) *Atomic Energy (Control of Materials) Act 34 of 1946.* This Act provides for control of substances which could be used for production or use of atomic energy. It gives the Commonwealth power to acquire such substances in their natural state and in waste materials from mining operations, to carry on mining and other operations necessary

for the recovery of such substances, and to pay compensation for such acquisition. It also gives the Commonwealth power to obtain possession of such substances held by any person.

The Act provides for the notification of discovery of any such substances or mineral containing such substance.

§ 17. Metallic Contents of Ores and Concentrates Produced.

According to returns compiled by the Australian Mines and Metals Association from records supplied by companies associated with mineral production and by State Departments of Mines, the metallic contents (excluding gold) of ores and concentrates produced in Australia during the years 1939 and 1944 to 1948 were as follows:—

METALLIC CONTENTS OF ORES AND CONCENTRATES PRODUCED IN AUSTRALIA.

Metal.		1939.	1944.	1945.	1946.	1947.	1948.
Silver	oz.	15,320,116	9,365,726	8,076,740	9,045,280	9,527,140	10,057,519
Lead, Pig	tons	280,003	189,485	164,741	183,835	196,623	216,955
Zinc	"	217,256	174,358	150,313	171,910	182,258	190,460
Copper	"	20,560	28,056	24,520	17,755	13,123	12,368
Tin	"	3,067	2,547	2,282	2,127	2,445	1,874

The production of pig-iron in New South Wales and South Australia—the only producing States until 1947–48 when production was commenced in Western Australia—reached its peak in 1941–42 when 1,557,641 tons were produced compared with 1,104,605 tons in 1938–39. Production had declined by 1945–46 to 906,283 tons but rose again in 1946–47 to 1,143,132 tons, and to 1,235,574 in 1947–48, including 771 tons, the output of Western Australia.

CHAPTER XIX.

PASTORAL PRODUCTION.

§ 1. Initiation and Growth of Pastoral Industry.

1. **General.**—A detailed account of the various enumerations of live stock in Australia made prior to 1860 is given in previous issues of the Year Book. The numbers recorded between 1800 and 1860 are regarded as somewhat defective. Doubtless the growth of population, the expansion in the area settled and the increase in private ownership made it difficult in those early times to secure accurate returns. Since 1860 however, the annual enumerations have been based, with few exceptions, on actual collections made through the agency of the State Police and reliably record the movement in live stock numbers from year to year.

2. **Live Stock Numbers since 1860.**—Particulars concerning the numbers of each of the principal kinds of live stock in Australia at decennial intervals from 1860 to 1930, and from 1939 onwards in single years are given in the following table, and are shown continuously on the graph on page 862.

During the eighty-nine years from 1860 to 1949, the livestock of Australia increased considerably, horses, 158 per cent; cattle, 257 per cent; sheep, 440 per cent; and pigs, 241 per cent. The average annual increases which these aggregates represent are as follows:—Horses, 1.07 per cent; cattle, 1.44 per cent; sheep 1.91 per cent; and pigs, 1.39 per cent.

LIVE STOCK : AUSTRALIA.

Year.				Horses.	Cattle.	Sheep.	Pigs.
1860	431,525	3,957,915	20,135,286	351,096
1870	716,772	4,276,326	41,593,612	543,388
1880	1,068,774	7,527,142	62,184,252	815,776
1890	1,521,598	10,299,816	97,881,221	891,138
1900	1,609,654	8,640,225	70,602,995	950,349
1910	2,165,866	11,744,714	98,066,046	1,025,850
1920	2,415,510	13,499,737	81,795,727	764,406
1930	1,792,734	11,720,916	110,568,279	1,071,679
1939	1,724,056	12,861,781	111,057,832	1,155,591
1940	1,698,797	13,080,180	119,305,391	1,455,341
1941	1,665,616	13,255,841	122,694,025	1,797,340
1942	1,611,059	13,560,754	125,189,129	1,477,303
1943 (31st March)	1,517,970	14,005,320	124,614,672	1,563,000
1944	"	"	..	1,449,199	14,183,679	123,173,962	1,746,721
1945	"	"	..	1,359,205	14,133,167	105,370,865	1,630,855
1946	"	"	..	1,265,398	13,878,006	96,396,405	1,425,709
1947	"	"	..	1,195,175	13,426,646	95,722,782	1,273,011
1948	"	"	..	1,164,650	13,784,584	102,558,650	1,254,683
1949	"	"	..	1,114,500	14,123,610	108,735,432	1,196,321

3. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of droughts which have from time to time left their impress on the pastoral history of Australia. These occurred in 1868, 1877, 1883-4, 1892, 1893, 1895, 1901-2, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41 and 1944-45 to 1946-47.

The years in which the numbers of live stock attained their maxima are as follows:—Horses, 1918 (2,527,149); cattle, 1921 (14,441,309); sheep, 1942 (125,189,129); and pigs, 1941 (1,797,340).

4. **Live Stock in Relation to Population.**—The number of each kind of live stock per head of the population of Australia has varied since 1860 as shown in the following table:—

LIVE STOCK PER HEAD OF POPULATION: AUSTRALIA.

Year.	Horses.	Cattle.	Sheep.	Pigs.	Year.	Horses.	Cattle.	Sheep.	Pigs.
1860 ..	0.38	3.45	17.58	0.31	1941 ..	0.23	1.87	17.28	0.25
1870 ..	0.43	2.60	25.24	0.33	1942 ..	0.22	1.89	17.46	0.21
1880 ..	0.48	3.37	27.87	0.37	1943 (a) ..	0.21	1.94	17.24	0.22
1890 ..	0.48	3.17	31.06	0.28	1944 (a) ..	0.20	1.94	16.83	0.24
1900 ..	0.43	2.29	18.75	0.25	1945 (a) ..	0.18	1.92	14.33	0.22
1910 ..	0.49	2.65	22.16	0.23	1946 (a) ..	0.17	1.87	12.97	0.19
1920 ..	0.44	2.49	15.11	0.14	1947 (a) ..	0.16	1.78	12.70	0.17
1930 ..	0.28	1.81	17.07	0.17	1948 (a) ..	0.15	1.80	13.37	0.16
1939 ..	0.25	1.87	16.11	0.16	1949 (a) ..	0.14	1.80	13.86	0.15
1940 ..	0.24	1.86	16.97	0.21					

(a) 31st March.

5. **Live Stock in Relation to Area.**—The number of live stock per square mile in the several States and Territories of Australia is given in the following table:—

LIVE STOCK PER SQUARE MILE, 1949.

State or Territory.	Horses.	Cattle.	Sheep.	Pigs.
New South Wales	1.16	10.51	162.89	1.21
Victoria	2.42	25.31	218.13	2.55
Queensland	0.48	8.94	24.61	0.61
South Australia	0.25	1.21	24.64	0.19
Western Australia	0.07	0.89	11.14	0.08
Tasmania	0.85	10.16	82.40	1.41
Northern Territory	0.06	2.01	0.05	0.00
Australian Capital Territory	1.00	10.70	253.29	0.50
Australia	0.37	4.75	36.55	0.40

On pages 895-8 there are graphs which show the distribution throughout Australia of beef cattle, dairy cattle, sheep and pigs as at 31st March, 1948.

BEEF CATTLE NUMBERS

6. **Minor Classes of Live Stock.**—Excluding Victoria, where the details are not available, the numbers of minor classes of live stock returned for 1941 were as follows :—Goats, 80,366; camels, 2,267; and mules and donkeys, 10,881. Of these, goats were most numerous in Queensland, and camels, mules and donkeys in Western Australia. In the raising of goats, some attention has been devoted to the angora goat and its product (mohair), and upwards of 5,000 angora goats are included in the number shown above. Of these, 1,640 were in New South Wales, 1,000 in Queensland, 1,531 in South Australia, and 284 in Tasmania. Details for later years were not collected.

7. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of Australia exceeded the imports for the years 1938–39 and 1944–45 to 1947–48 were as follows :—

NET EXPORTS OF PASTORAL PRODUCTS : AUSTRALIA.

Product.	Unit of Quantity.	1938–39.	1944–45.	1945–46.	1946–47.	1947–48.

NOTE.—Minus sign (—) signifies net imports.

The values of the net exports for the same five years are furnished in the next table. For the four years ended 1947–48 they amounted to £A.486,723,163, or an average of £A.121,680,791 per annum, of which wool represented 78.9 per cent. Meat, skins and tallow comprise the remaining principal pastoral products exported. Net exports in 1938–39 were valued at £56,290,910 of which wool represented 74.56 per cent.

8. Value of Pastoral Production.—(i) *General.* Particulars of the gross, local and net values of pastoral production for each State are shown for 1946-47 and 1947-48 in the following table. Fuller details of the source of the information and an explanation of the terms used in this compilation will be found in Chapter XXVIII. "Miscellaneous". Maintenance costs have not been computed in all States and depreciation has not been deducted; consequently the net values are inflated to the extent of these costs.

9. **Consumption of Meats.**—Particulars of the quantity of meat per head per annum available for civilian consumption in Australia, Canada, the United Kingdom and the United States are given in the following table. Canned and cured meat has been included at its carcass weight equivalent.

The sources of the figures for Canada, the United Kingdom, and the United States of America are Food Balance Sheets published by the Food and Agricultural Organization of the United Nations (April, 1949), for the year 1947-48 and Food Consumption Levels in the United States of America, Canada and the United Kingdom—Third Report (1946) of a Special Joint Committee set up by the Combined Food Board—in respect of the earlier periods shown.

The demand for meat during the war years was such as to necessitate the introduction of rationing in order to divert supplies from civilian consumption to the armed services. The rationing of meat (other than bacon and ham, canned meat, sausages and offal) was in operation in Australia from 17th January, 1944 to 21st June, 1948. Details of the ration rates in force over this period are shown in Official Year Book No. 37, p. 858.

10. **Marketing of Meat.**—(i) *General.* The Meat Export Control Act 1935-1946 was introduced following a decision of a conference of Commonwealth and State Ministers with members of the Commonwealth Meat Advisory Committee, held in October, 1935, to set up a Meat Board with defined statutory powers. The Australian Meat Board, which was appointed under the Act in January, 1936, consisted of eighteen members, representative of producers, processors, exporters and the Commonwealth Government. Provision was made for the appointment from within the Board of an Executive Committee and a Beef Committee. The Act provided for the control of the

export of meat by licence. The Board was empowered to regulate shipments of meat and to arrange contracts in respect of freights and insurances; to promote overseas sales by advertising and to foster research into meat problems; and to supervise the issue of export licences. The Board also has power to appoint a London representative. During the 1939-45 War the control of meat exports was under National Security Regulations which ceased to operate with the expiry of the National Security Act on 31st December, 1946. Control then reverted to the Board, which was reconstituted in August, 1946 by legislation amending the Meat Export Control Act. Membership of the reconstituted Board is on an industry basis in lieu of a State basis and the number of members has been reduced from eighteen to twelve. The powers and functions of the Board were *inter alia* extended to enable it to purchase and sell any meat, meat products or edible offal on behalf of the Commonwealth Government and subject to any direction of the Minister for Commerce and Agriculture.

The Meat Export Charges Act 1935-46 provides for the imposition of a levy on all meats exported from Australia, the funds from which are used for the purpose of defraying expenses and charges incurred by the Australian Meat Board in the course of its business. The customary provision is made for exemption from the levy when recommended by the Board.

(ii) *War-time Marketing.* Details of arrangements for the marketing of meat during the 1939-45 War are given on page 1107 of Official Year Book No. 36.

(iii) *Long-term Purchase Agreement.* An agreement was completed between the Government of the United Kingdom and the Commonwealth Government for the long-term purchase of the exportable surplus of Australian meat for the period 1st October, 1944 to the 30th September, 1948.

The agreement covered all classes of meats, including sundries in the fresh, frozen, and canned forms, for the currency of the agreement, with the exception of pigmeats, whose quantities were determined only until the expiry of the second year of the contract, namely 30th September, 1946. Quantities of the latter class of meat for the two succeeding years of the contract were arranged subsequently by negotiation between the two Governments.

Prices were determined for all classes and cuts of meat for the first two years of the contract, which provided that they could be reviewed prior to specified dates at the instigation of either Government in respect of each of the two final years of the agreement.

Subject to certain conditions the Government of the United Kingdom agreed to reimburse the cost of storage and interest incurred by the Commonwealth Government in connexion with the purchase and storage of such meat after it had been in store 28 days.

The arrangement also provides for ample opportunity to be given to the meat industry of Australia to re-engage in the chilled beef trade with the United Kingdom when the shipping position makes that possible.

A further interesting feature is that the Government of the United Kingdom will consult with the Commonwealth Government regarding the steps necessary to ensure a mutually agreeable distribution of Australian meat in the United Kingdom, and also, when the present scheme of control is withdrawn or modified, will confer with the Commonwealth Government as to the ways and means of securing an orderly resumption of private trading.

The prices originally determined under the long-term purchase arrangement operated until 30th September, 1946, and approximated those which were being paid by the Commonwealth Government under its War-time Meat Purchase Plan. As from 1st October, 1946, rises in prices operated for the new contract year. These rises have been passed on to the producers. Prices for the year ended 30th September, 1948 remained unchanged, except for some minor adjustments.

The original agreement was later extended for a further two years to 30th September, 1950. All prices were increased for the year ended 30th September, 1949, and, in accordance with the terms of the agreement, may be further reviewed for the concluding year.

The Australian and United Kingdom Governments are at present considering a further agreement to cover the purchase of Australia's exportable surplus of meat for a term of fifteen years. The plans under consideration envisage measures to expand Australia's production of meat for export.

§ 2. Horses.

1. *Suitability of Australia for Horse-breeding.*—From the earliest times the suitability of the climate and pastures of Australia for the production of serviceable breeds of horses has been fully recognized. By the importation of high-class sires, and the careful selection of breeding mares, these natural advantages have been utilized to the fullest extent in breeding all classes of horses. As a consequence of this combination of advantages, the Australian horse, whether of the heavy draught, medium weight, or light saddle variety, compares very favourably with the product of other lands.

2. *Distribution throughout Australia.*—The States of New South Wales, Queensland and Victoria together depasture about 80 per cent. of the total number of horses in Australia. In the following table figures are given for each State and Territory for the years 1945 to 1949 in comparison with the average for the years 1935 to 1939 :—

HORSES : NUMBER.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	A.C.T.	Total.
Average, 1935 to 1939 ..	536,705	354,815	443,977	198,034	154,347	30,859	33,231	1,133	1,753,101
1945 ..	436,443	253,782	380,670	133,003	96,528	25,885	31,803	1,091	1,359,205
1946 ..	403,645	232,473	367,357	115,949	88,180	24,863	31,883	1,048	1,265,398
1947 ..	379,774	227,164	343,172	109,274	80,746	23,925	30,019	1,101	1,195,175
1948 ..	376,943	221,454	335,581	100,619	74,537	23,125	32,318	973	1,164,650
1949 ..	357,764	213,090	324,707	94,071	68,521	22,207	33,197	943	1,114,500

The number of horses attained its maximum in Australia during 1918, when a total of 2,527,149 was recorded. The United States of America made its highest recording in the same year and Canada in 1921. The number in Australia has declined considerably since 1918 owing to the mechanization of transport and farming. During the period 1918 to 1949 the decrease in numbers averaged 45,500 per annum, the rate of decline being 67,000 per annum during the five years ended 1949.

The number of horses in Australia from 1860 onwards may be obtained from the graph on page 862.

The percentages of the number of horses in the several States and Territories on the total for Australia for 1949 were :—New South Wales, 32.10; Victoria, 19.12; Queensland, 29.14; South Australia, 8.44; Western Australia, 6.15; Tasmania, 1.99; Northern Territory, 2.98; and Australian Capital Territory, 0.08 per cent.

3. *Oversea Trade in Horses.*—(i) *Exports.* The export of horses from Australia during the early years of this century was fairly considerable, averaging about 15,000 head per annum between 1901 and 1920, exclusive of those used for war purposes during the 1914–18 War. Since then, exports have gradually declined and averaged only about 4,000 for the five years ended 1938–39 and 484 for the five years ended 1947–48.

(ii) *Imports.* The few horses imported into Australia consist mainly of valuable stud animals from the United Kingdom and racehorses from New Zealand. The average value per head of the horses imported during the five years 1943-44 to 1947-48 was £A.986. The average number imported per annum was, however, only 181, and the average annual value, £A.178,917.

Details of the quantity and value of imports, exports and net exports of horses are shown in the following table for the years 1943-44 to 1947-48 compared with the average for the five years ended 1938-39.

HORSES : IMPORTS AND EXPORTS, AUSTRALIA.

NOTE.—The minus sign (—) signifies net imports.

§ 3. Cattle.

1. *Purposes for which Raised.*—Cattle-raising is carried out in all the States, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry led to a considerable increase in numbers and an improvement in quality of the dairy herds in Victoria, New South Wales, and Southern Queensland in particular, the portion of Australia in the temperate zone being the best adapted to this industry. On the other hand, beef-producing cattle are mainly raised in the tropical districts, i.e., in the northern parts of Queensland, in the Northern Territory, and in the Kimberley district in the north of Western Australia.

2. *Distribution throughout Australia.*—Until 1880, New South Wales was the principal cattle-raising State, but in that year Queensland occupied the leading position, which it has since maintained. There was a very rapid increase in the number of cattle in Australia up to the year 1894, when 12,311,617 head were depastured. From 1895 onwards, however, the effects of droughts and the ravages of tick fever reduced the number to 7,062,742 in 1902. Following the disastrous drought which terminated in the latter year the herds were gradually built up, and, despite recurring droughts, they continued to increase until the maximum number of 14,441,309 cattle was attained in 1921. After that year the number dropped continuously till 1929, largely owing to the decline in the overseas demand for frozen beef. With the expansion of dairying it recovered to 14,048,671 in 1934, but from that year declined continuously to 1939 when it stood at 12,861,781. The upward movement which commenced in 1940 was continued until 1944, the total number of cattle (14,183,679) in the latter year being at its highest level since 1923. Drought conditions and other factors during 1944-45 and 1945-46 caused a decline in numbers to 14,133,167 in 1945, to 13,878,006 in 1946 and to 13,426,646 in 1947. There has, however, since been an upward movement in numbers to 13,784,584 in 1948 and 14,123,610 in 1949. A graph showing the number of cattle in Australia from 1860 appears on page 862.

The numbers of cattle (beef and dairy) in the several States and Territories in each year 1945 to 1949 compared with the average for the years 1935 to 1939 are shown below.

CATTLE : NUMBER.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aus. Cap. Terr.	Total.
Average, 1935 to 1939									
1939	3,198,201	1,951,962	6,018,494	330,581	819,026	262,088	889,345	8,771	13,478,468
1945	3,144,701	1,903,110	6,623,112	391,323	852,563	224,668	984,370	9,320	14,133,167
1946	3,116,834	1,827,087	6,542,210	374,096	833,567	216,306	960,039	7,867	13,878,006
1947	2,983,093	2,060,061	5,945,285	423,980	811,949	220,119	972,990	9,169	13,426,646
1948	3,129,740	2,174,203	5,975,460	445,287	815,610	244,707	991,429	8,748	13,764,584
1949	3,252,752	2,224,543	5,991,797	461,086	864,131	266,419	1,052,811	10,071	14,123,610

Although the proportion is not as high as it has been in the past, Queensland was carrying 42.42 per cent. of the cattle in Australia in 1949. The percentage in each State and Territory during that year was :—New South Wales, 23.03 ; Victoria, 15.75 ; Queensland, 42.42 ; South Australia, 3.27 ; Western Australia, 6.12 ; Tasmania, 1.89 ; Northern Territory, 7.45 ; Australian Capital Territory, 0.07.

Graphs indicating the distribution of beef and dairy cattle separately in Australia during 1947-48 are shown on pp. 895-6 of this issue. A graph showing the distribution in 1924-25 of the total cattle in Australia appeared on page 660 of Official Year Book No. 22 while in Official Year Book No. 34 similar graphs respecting the distribution of total cattle and of dairy cows may be found on pp. 453-4.

3. **Classification of Cattle According to Purpose.**—Of the total number of cattle in Australia in 1949, 9,260,972 or 65.6 per cent. were classified as beef cattle. The numbers classified as beef cattle in the several States and Territories during the years 1943 and 1945 to 1949 were as follows :—

BEEF CATTLE : NUMBER.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aus. Cap. Terr.	Total.
1943	1,676,174	577,362	4,892,691	170,657	604,543	101,735	978,434	5,428	9,007,024
1945	1,813,166	538,908	5,113,870	146,215	617,634	96,602	984,370	6,908	9,317,673
1946	1,839,630	527,318	5,099,509	142,795	604,056	90,139	960,039	5,243	9,268,729
1947	1,755,456	648,433	4,613,163	161,913	588,397	87,854	972,990	6,227	8,834,433
1948	1,889,979	697,824	4,592,896	170,156	590,130	100,066	991,429	5,917	9,038,403
1949	1,993,395	711,251	4,568,966	182,065	634,138	111,297	1,052,811	7,049	9,260,972

A classification of numbers on this basis is not available prior to 1943.

Particulars relating to dairy cattle numbers will be found in Chapter XXI. "Farm-yard, Dairy and Bee Products".

4. **Size Classifications of Cattle Herds.**—A special series of tabulations relating to rural holdings in Australia was compiled for 1947-48 and published in *Production Bulletin* No. 42—Part II.—Primary Industries and Total Recorded Production. The tables relating to beef and dairy cattle show classifications according to size of herd and area of the holdings, together with data indicating the extent to which cattle were run in conjunction with pig-raising and wheat-growing.

5. **Comparison with other Countries.**—The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world for the years 1936-40 and at the latest available date. The figures, which have been compiled by the Food and Agriculture Organization of the United Nations, relate generally to areas embraced by post-war boundaries, but do not cover identical areas for the two periods in all cases.

CATTLE : NUMBER IN VARIOUS COUNTRIES.

('000.)

Country.	Average, 1936-40.(a)	Year and Month.	Number.
India	(b) 137,974	1945	136,369
United States of America	66,684	1947 (January) ..	81,207
Brazil	40,807	1946 (September) (c)	46,358
U.S.S.R. (Russia)	48,500	1946	(c) 41,500
Argentina	33,762	1947 (June) ..	41,268
Pakistan	(b) 24,444	(d)	(d)
China, Proper	(e) 23,081	1947 (May) ..	18,998
France	15,504	1946 (October) ..	15,100
Germany	19,881	1946 (December) (f)	13,982
Australia	13,285	1947 (March) ..	13,427

Uruguay	8,297	1946 (May) ..	6,834
Tanganyika	(b) 5,209	1947	6,420
Madagascar	(b) 5,266	1946 (December)	5,940

(a) Average for two to four years in some cases. (b) 1939. (c) Unofficial estimate.
 (d) Not available. (e) 1937. (f) 1948 *de facto* boundaries.

6. Imports and Exports of Cattle.—The products of the cattle-raising industry figure largely in the export trade of Australia, although the export of live cattle has never been large. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for stud purposes. Details for the years 1943-44 to 1947-48 compared with the average for the years 1934-35 to 1938-39 are as follows :—

CATTLE : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
Average, 1934-35 to 1938-39	295	£A.f.o.b. 22,304	308	£A.f.o.b. 5,977	13	£A.f.o.b. -16,327
1943-44 ..	32	5,364	125	3,302	93	-2,002
1944-45 ..	59	16,971	1,232	24,138	1,173	7,167
1945-46 ..	56	32,919	340	10,110	284	-22,809
1946-47 ..	111	56,585	781	28,615	670	-27,970
1947-48 ..	103	29,934	4,359	74,141	4,256	44,207

NOTE.—The minus sign (—) signifies net imports.

The average value per head of the cattle imported during the last five years was £A.392 14s. 5d. while the average value per head of the cattle exported during the same period was £A.20 10s. 7d.

7. **Cattle Slaughtered.**—The numbers of cattle slaughtered during each of the years ended June, 1944 to 1948 compared with the average for the years 1934-35 to 1938-39 are shown in the following table :—

CATTLE (INCLUDING CALVES) SLAUGHTERED.

('000.)

Year ended June—	Slaughterings passed for Human Consumption.									Total Slaughterings including Boiled Down.
	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N. T.	A.C.T.	Total.	
Average, 1935 to 1939..	a 1,112	812	1,046	(b) 156	(b) 124	45	(b) 4	2	3,391	3,331
1944 ..	974	755	948	177	103	53	41	2	3,053	3,092
1945 ..	970	795	942	169	102	47	41	1	3,067	3,109

1947	140	96	190	24	26	8	3	1	488
1948	162	105	226	27	30	8	3	1	562

(a) Year ended March.

(b) Year ended previous December.

9. **Consumption of Beef and Veal.**—For the three pre-war years 1936-37 to 1938-39 the average annual production of beef and veal in Australia was 569,000 tons of which 127,000 tons were exported, leaving a balance of 442,000 tons (or the carcass equivalent of 144 lb. per head per annum) available for consumption as fresh and canned meat.

In order to cope with the increasing demands by Australian and Allied Services based upon Australia and to supply as much beef as possible to meet the import requirements of the United Kingdom, it was necessary to introduce from January, 1944 a system of rationing limiting civilian consumption which has always been very high. As a result, the quantity of beef and veal entering civilian consumption per head decreased from the pre-war average of 144 lb. to 124 lb. in 1943, 92 lb. in 1944 and 87 lb. in 1945. Consumption subsequently increased to 93 lb. per head in 1946, 97 lb. in 1946-47 and 109 lb. in 1947-48. Meat rationing was discontinued from 21st June, 1948 and there was a further rise in consumption to about 120 lb. per head in 1948-49.

In the following table details of the production and disposal of beef and veal are given for the periods stated.

**PRODUCTION AND DISPOSAL OF BEEF AND VEAL (BONE-IN WEIGHT) :
AUSTRALIA.**

('000 tons.)

Year.	Changes in Stock.	Production.	Exports.	For Canning.	Consumption in Aus- tralia as Human Food.	
					Total.	Per Head per Annum.
Average, 1936-37 to 1938-39	..	569	127	(a)	442	lb. 144.1
1946-47 + 8	488	91	65	324	96.5
1947-48	562	117	73	372	108.9
1948-49(b) - 4	572	98	61	417	119.9

(a) Included with exports.

(b) Subject to revision.

10. **Exports of Frozen Beef and Veal.**—The export of frozen meat from Australia dates from about 1881, and since that year the trade has grown considerably. The quantity of frozen beef and veal exported in 1938-39 amounted to 271,963,829 lb., valued at £A.4,323,680, but there was a decline during the war years owing to reduced production and the diversion of supplies to meet the requirements of the Australian and Allied Services based on Australia. The quantity exported in 1947-48, although considerably above the war-time levels, was approximately 12.8 per cent. less than in 1938-39. The quantities and values of frozen beef and veal exported during the five pre-war years ended 1938-39 and in each year 1943-44 to 1947-48 are shown in the following table :—

EXPORTS OF FROZEN BEEF AND VEAL : AUSTRALIA.

Year.	Exports of Frozen and Chilled Beef.		Exports of Frozen Veal.	
	lb.	£A. f.o.b.	lb.	£A. f.o.b.
Average, 1934-35 to 1938-39	231,355,425	3,188,491	10,353,356	165,205
1943-44	46,266,506	1,212,311	1,180,490	34,004
1944-45	61,595,568	1,623,697	1,551,690	39,405
1945-46	106,059,782	2,711,077	4,731,548	122,906
1946-47	178,298,117	4,521,746	2,040,347	60,127
1947-48	234,592,893	6,110,568	2,557,206	82,047

Prior to the war the largest purchaser of Australian beef and veal was the United Kingdom, which during 1938-39 took £3,901,691, or about 90.2 per cent. of the total shipments. Other countries importing Australian beef were, in order of importance, Egypt, Malaya (British), Malta, Philippine Islands and Hong Kong; these countries, together with the United Kingdom, accounted for 98.0 per cent. of the total value of exports. However, at the request of the United Kingdom Government there was a considerable diversion from that country to nearer British possessions during the war years. In 1947-48 shipments to the United Kingdom were valued at £5,371,034 or 86.7 per cent. of the total value of beef and veal exports, while exports to other British countries amounted to £595,096, equivalent to 9.6 per cent. of the total.

In view of the preference overseas for chilled beef, the Australian beef industry was at a serious disadvantage until investigations proved that beef could be successfully transported from Australia to United Kingdom in a chilled condition. Trial shipments of 254,000 lb. in 1932-33 and 1,515,000 lb. in 1933-34 were made, and the exports in subsequent years increased as follows :—1934-35, 21,570,928 lb., £322,239; 1936-37,

41,869,695 lb., £608,175; and 1938-39, 58,963,009 lb., £988,148. However, the advent of war seriously affected the export trade in chilled beef, which decreased as follows:—1939-40, 12,786,859 lb., £206,353; 1940-41, nil; 1941-42, 1,697 lb., £70; 1942-43, 1,843 lb., £69; and 1943-44 to 1947-48, nil.

II. **Contract for Purchase of Exportable Surplus.** A long-term contract was negotiated between the Governments of the Commonwealth and the United Kingdom for the purchase of Australia's exportable surplus of beef and veal for 4 years ended 30th September, 1948. The contract was later extended for a further two years to 30th September, 1950. Fuller particulars will be found in § 1, par. 10 (iii) *ante*.

§ 4. Sheep.

1. **Initiation of the Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool were, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and while it would appear that the introduction of the merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

2. **Movement in Sheep Numbers: Australia.**—Fluctuations in the number of sheep recorded for each year in Australia from 1860 onwards may be seen from the graph on page 862. Up to 1945 there were five marked periods of decline, but the losses were made up rapidly. In each of the years 1925 to 1945 the sheep flocks exceeded 100 millions, reaching 125,189,129 in 1942, the greatest number recorded in Australia. At no previous period have such large numbers been depastured continuously, and the development has taken place despite an increase, over this period, in the annual slaughter for the meat trade from about 10 million to 25 million.

However, a sharp decline to 105 millions occurred in 1945 followed by a further reduction to 96.4 millions in 1946 and to 95.7 millions in 1947. This represented a loss from all causes other than slaughtering of about 27 million sheep (22 per cent.) since 1944 and was largely attributable to the severe drought conditions experienced during 1944, 1945 and 1946. The passing of the drought and consequent re-stocking resulted in a rise in sheep numbers to 102.6 millions in 1948 and to 108.7 millions in 1949.

The following table shows the approximate movement in sheep numbers in Australia in each season 1938-39 to 1948-49:—

SHEEP AND LAMBS: ANALYSIS OF MOVEMENT IN NUMBERS, AUSTRALIA.
(‘000.)

Season.	Lambs marked.	Excess of Imports (+) or Exports (—)	Sheep and Lambs Slaughtered.	Estimated number of deaths from disease, drought, etc. (a)	Number at 31st March.	Annual Net Increase (+) or Decrease (—)
1938-39 ..	25,469	— 67	18,900	8,817	(b) 111,058	— 2,315
1939-40 ..	33,300	— 72	19,006	5,975	(b) 119,305	+ 8,247
1940-41 ..	32,238	— 86	21,822	6,941	(b) 122,694	+ 3,389
1941-42 ..	32,246	— 65	22,258	7,428	(b) 125,189	+ 2,495
1942-43 ..	32,268	— 5	25,573	7,264	124,615	— 574
1943-44 ..	33,366	— 7	26,585	8,215	123,174	— 1,441
1944-45 ..	25,635	— 3	25,632	17,803	105,371	— 17,803
1945-46 ..	20,683	— 22	17,682	11,954	96,396	— 8,975
1946-47 ..	25,186	— 80	18,362	7,417	95,723	— 673

1948-49 (c) ..	30,646	— 84	17,477	6,909	108,735	+ 6,176

(a) Balance figure.

(b) As at commencement of last year shown.

(c) Subject to revision.

3. **Distribution throughout Australia.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, depasturing about one half of the sheep of Australia.

A graph indicating the distribution of sheep in Australia during 1947-48 is shown on page 897. Similar graphs for the years 1938-39 and 1924-25 were published in Official Year Books, No. 34, page 452 and No. 22, page 659, respectively.

The numbers of sheep in the several States and Territories for each year 1945 to 1949 compared with the average for the years 1935 to 1939 are shown in the following table:—

SHEEP : NUMBER.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Total.
(a)	51,773,771	17,554,969	21,060,512	8,515,353	9,839,454	2,311,729	23,351	240,239	111,319,378
1945	46,662,000	16,457,101	21,202,120	8,473,939	10,049,587	2,156,071	29,269	250,778	105,370,865
1946	44,076,000	14,655,277	18,943,762	6,786,538	9,765,983	1,925,604	18,561	224,680	96,396,405
1947	44,105,000	16,598,490	16,084,340	7,958,619	9,787,002	1,933,332	28,005	227,994	95,722,782
1948	46,065,000	17,931,173	16,742,629	9,055,237	10,443,798	2,086,528	19,058	215,227	102,558,650
1949	50,404,000	19,170,312	16,498,957	9,365,713	10,872,540	2,160,009	25,791	238,110	108,735,432

(a) Average, 1935 to 1939.

Apart from the effect of drought the relative number of sheep depastured in the different States has remained fairly constant.

The percentage distribution in 1948 was:—New South Wales, 46.36; Victoria, 17.63; Queensland, 15.17; South Australia, 8.61; Western Australia, 10.00; Tasmania, 1.99; Northern Territory, 0.02; Australian Capital Territory, 0.22 per cent.

4. Classification of Sheep According to Age, Sex and Breed.—In the following table numbers of sheep in Australia are classified according to age and sex at 31st March of the years 1943 and 1946 to 1949. Data in this form are not available prior to 1943.

SHEEP : AGE AND SEX, AUSTRALIA.

Description.	31st March—				
	1943.	1946.	1947.	1948.	1949.
Rams, 1 year and over ..	1,651,231	1,300,842	1,331,614	1,383,644	1,442,896
Breeding ewes (including ewes intended for mating)	56,674,075	47,652,092	47,672,089	49,770,919	50,855,371
Other ewes, 1 year and over	9,636,124	6,382,593	5,615,600	5,432,501	6,795,058
Wethers, 1 year and over ..	31,985,775	25,002,494	22,486,789	22,931,972	26,109,630
Lambs and hoggets, under 1 year ..	24,667,467	16,058,384	18,616,690	23,039,614	23,441,877
Total, Sheep and lambs	124,614,672	96,396,405	95,722,782	102,558,650	108,735,432

Particulars relating to the principal breeds of sheep were collected uniformly for all States and the Australian Capital Territory at 31st March, 1947 and are shown in the following table. Later details are not available for all States:—

SHEEP : PRINCIPAL BREEDS, 31st MARCH, 1947.

Breed.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T. (a)	A.C.T.	Australia.
Merino ..	31,067,510	5,265,808	15,872,429	5,926,462	8,323,849	280,313	27,637	196,802	66,960,810
Other pure breeds	2,139,893	1,407,349	23,795	342,187	488,975	456,411	41	8,119	4,866,770
Merino comebacks	2,059,812	3,001,730	89,132	274,068	(b)	282,300	155	5,114	(c) 5,712,311
Crossbreds ..	7,837,785	6,923,603	98,984	1,415,902	974,178	914,308	172	17,959	18,182,891
Total ..	43,105,000	16,598,490	16,084,340	7,958,619	9,787,002	1,933,332	28,005	227,994	95,722,782

(a) As at 31st December, 1946. Distribution between categories has been estimated separately. Included with crossbreds.

(c) Incomplete.

(b) Not Available.

5. **Size Classifications of Sheep Flocks.**—A special series of tabulations relating to rural holdings in Australia was compiled for 1947-48 and published in *Production Bulletin* No. 42—Part II.—Primary Industries and Total Recorded Production. The tables relating to sheep farming show classifications according to size of flock and areas of the holdings together with data indicating the extent to which sheep are run in conjunction with wheat-growing.

6. **Comparison with other Countries.**—As regards the size of its flocks and the quantity and quality of wool produced, Australia has long occupied a leading position amongst the sheep-raising countries of the world.

As with a number of other important sheep-raising countries, it has, however, suffered a considerable reduction in sheep numbers since 1939, but still holds the leading position with 103 million sheep, followed by the U.S.S.R. (Russia) with about 65 million, Argentina with 51 million and India with 50 million. The highest percentage reductions in sheep numbers since immediately preceding the 1939-45 War have occurred in Rumania, 44.5 per cent.; Morocco (French), 41.2; United Kingdom, 32.3; United States of America, 31.2; France, 26.3; China, 26.1; Greece, 25.9; Union of South Africa, 21.3; and U.S.S.R. (Russia), 17.7.

The following table shows the number of sheep in Australia in relation to the numbers in some of the principal sheep-raising countries of the world for the last available pre-war year and at the latest date of enumeration. The figures have been compiled by the Commonwealth Economic Committee and the International Wool Textile Organization, who have estimated the world sheep numbers in 1947-48 at 684 million.

SHEEP : NUMBER IN VARIOUS COUNTRIES
(’000,000.)

Country.	Pre-war.		Post-war.	
	Year.	Number.	Year.	Number.
Australia	1938-39	111.1	1947-48	102.6

(a) Estimated.

(b) No recent pre-war figures available.

(c) Unofficial figures.

7. **Overseas Imports and Exports of Sheep.**—As in the case of cattle, the overseas exports of live sheep from Australia are of comparatively little importance. During the last five years the principal consignments of ordinary sheep have been made to Malaya (British) from Western Australia. On 27th November, 1929, the export of stud sheep was prohibited, except with the approval of the Minister for Trade and Customs.

Stud sheep, however, were being exported in increasing numbers up to the outbreak of war in the Pacific, and shipments in 1939-40 amounted to 23,329 sheep valued at £79,955 compared with 346 valued at £7,315 in 1947-48. The chief countries to which stud sheep were consigned in 1939-40 were New Zealand, South Africa, Japan and Korea. The ordinary flock sheep exported from Australia were, for the most part, consigned to Malaya and the Pacific Islands. The following table shows the imports and exports of stud and flock sheep for the years 1943-44 to 1947-48 compared with the average for the years 1934-35 to 1938-39.

SHEEP : IMPORTS AND EXPORTS, AUSTRALIA.

9. Production of Mutton and Lamb.—Details of the production of mutton and lamb in each State and Territory are shown below :—

PRODUCTION OF MUTTON AND LAMB. (Tons.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Total.
Average, 1934-35 to 1938-39 ..	103,706	135,149	20,166	29,710	20,476	6,035	1	396	315,639
1943-44 ..	156,901	145,786	36,362	45,933	32,377	10,501	36	788	428,744
1944-45 ..	138,648	143,247	30,724	46,888	25,816	9,200	36	834	395,393
1945-46 ..	122,278	86,615	24,913	25,989	22,170	7,909	36	752	290,662
1946-47 ..	110,097	111,684	18,056	31,574	22,545	7,162	51	817	302,586
1947-48 ..	102,818	108,610	18,664	33,289	24,120	6,906	59	814	295,280

10. **Consumption of Mutton and Lamb.**—For the three pre-war years 1930-37 to 1938-39 the annual production of mutton and lamb averaged 320,000 tons of which 90,000 tons were exported leaving a balance of 230,000 tons (or the carcass equivalent of 74.9 lb. per head per annum) available for consumption.

During the war the demand for meat by Australian and Allied Services and the desire to maintain, as far as possible, exports to the United Kingdom necessitated the restriction of local consumption by the introduction, in January, 1944, of a system of rationing.

As the service and export demand was principally for beef this class of meat was in shorter supply to civilians than was mutton or lamb. As a result, the coupon rating for beef fixed under the civilian ration scale was more restrictive, and had the effect of increasing the quantity of mutton and lamb entering civilian consumption to a level approximating that of beef. In 1946-47, however, mutton and lamb consumption declined to below the pre-war level as a result of heavy shipments overseas and decreased slaughterings. Consumption per head has since risen slightly from 67.8 lb. in 1946-47 to 69.8 lb. in 1947-48 and to 70.4 lb. in 1948-49.

In the following table details of the production and disposal of mutton and lamb are given for the periods stated:—

**PRODUCTION AND DISPOSAL OF MUTTON AND LAMB (BONE-IN WEIGHT):
AUSTRALIA.
(’000 tons.)**

Year.	Changes in Stock.	Pro- duction.	Exports.	For Canning and Dehydra- tion.	Consumption in Aus- tralia as Human Food.

1948-49 (b) ..	+ 8	311	51	7	245	70.4

(a) Included with exports.

(b) Subject to revision.

11. **Exports of Frozen Mutton and Lamb.**—The export trade in mutton and lamb preserved by cold process expanded rapidly to 1913 when 205 million lb. were shipped. Progress was interrupted during the 1914-18 War and, owing probably to high wool prices, the exports of mutton and lamb for a number of years after were considerably less than earlier shipments. Exports commenced to rise again in 1929-30 and from that year onwards they continued to expand almost uninterruptedly until 1942-43 in which year 203,681,520 lb. of mutton and lamb, valued at £5,495,886, were exported. In earlier years shipments consisted mainly of frozen mutton but in 1923-24 lamb supplanted mutton and the exports of lamb were largely responsible for the increase in total shipments during the ten years to 1942-43. Due to reduced production as a result of drought conditions and the diversion of supplies to meet the requirements of the Australian and Allied Services based in Australia, there was subsequently a marked decline in mutton and lamb exports, which fell to 56,574,651 lb., valued at £1,540,419, in 1945-46. Exports rose steeply to 164,302,923 lb. (£4,543,764) in 1946-47, but fell again in 1947-48 to 122,482,889 lb. (£4,248,695).

The quantities and value of exports of frozen mutton and lamb in each year 1943-44 to 1947-48 compared with the average for the five years ended 1938-39 are given in the following table:—

EXPORTS OF FROZEN MUTTON AND LAMB : AUSTRALIA.

Year.	Exports of Frozen Mutton.		Exports of Frozen Lamb.		Exports of Frozen Mutton and Lamb.	
	lb.	£A. f.o.b.	lb.	£A. f.o.b.	lb.	£A. f.o.b.
Average, 1934-35 to 1938-39 ..	40,583,651	656,194	153,606,462	4,208,318	194,190,113	4,864,512
1943-44 ..	30,010,466	501,668	141,559,299	4,141,935	171,569,765	4,643,603
1944-45 ..	38,021,898	725,214	108,772,494	3,217,869	146,794,392	3,943,083
1945-46 ..	17,527,848	362,057	39,046,803	1,178,362	56,574,651	1,540,419
1946-47 ..	52,208,402	912,292	112,094,521	3,631,472	164,302,923	4,543,764
1947-48 ..	19,394,136	447,278	103,088,753	3,801,417	122,482,889	4,248,695

As with beef, the principal customer in this trade is normally the United Kingdom, which absorbed 91 per cent. of the total quantity exported from Australia during 1943-44. In 1947-48 exports of mutton and lamb to the United Kingdom amounted to 71.2 per cent. and 97.6 per cent. respectively of the total quantities exported.

12. **Contract for Purchase of Exportable Surplus.**—A long term contract covering the four years ended 30th September, 1948 was completed between the Governments of the Commonwealth and the United Kingdom for the purchase of Australia's surplus mutton and lamb. The contract was later extended for a further two years to 30th September, 1950. Particulars will be found in § 1, par. 10 (iii) *ante*.

§ 5. Wool.

1. **General.**—Australia is the leading wool-growing country in the world. With less than one-sixth of the world's sheep Australia produces one-quarter of the world's wool and of the total fine-quality merino wool, Australia produces about one-half. The bulk of the production is exported, but with the greater activity of Australian woollen mills the quantity used locally is increasing: the amount so used represented more than 10 per cent. of the total production in 1947-48 compared with 7 per cent. in 1938-39.

The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the following table. Further particulars of wool production in principal countries and of world production of wool by type are included in paragraph 6, "World Wool Production".

SHEEP AND WOOL : PRINCIPAL PRODUCING COUNTRIES, 1947-48.

Country.					No. of Sheep ('000,000).	Wool Production ('000,000 lb. in terms of greasy).
Australia	102.6	973
Argentina	50.9	495
New Zealand	32.5	357
United States of America	35.3	328
U.S.S.R. (Russia)	(a) 65.0	240
Union of South Africa	30.7	189

(a) Estimated.

Source : Commonwealth Economic Committee and International Wool Textile Organization.

2. **Greasy and Scoured Wool.**—Whether the weight of the wool clip should be stated as “in the grease” or as “scoured and washed” is a matter which seriously affects comparisons between the clips of different seasons and of different countries. The quantity of grease and other extraneous matter in a fleece differs, not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. There is, moreover, no clearly defined standard in regard to the clean content of wool described as scoured and washed.

A committee of experts in a report to the Central Wool Committee estimated in 1940 that the clean scoured wool content of the total production of Australia averaged between 51 and 53 per cent. of its greasy weight.

Wool scoured in Australia by wool-scouring works, however, yields only about 46 per cent. because the grade of greasy wool treated locally for export as scoured includes a large proportion of dirty and low-grade wool.

The quantity of scoured and washed Australian wool exported during the five years ended 1947-48 was approximately 23.6 per cent. of the total wool exports regarded as “greasy”.

3. **Production.**—The bulk of the Australian wool production is shorn from live sheep; approximately 6 per cent. is obtained by fellmongering and about 5 per cent. is on skins exported. Statistics of wool production are compiled from data received from growers, fellmongers, etc. The following table shows the production for the five years 1943-44 to 1947-48 compared with average production for the five years ended 1938-39. Particulars of the gross value of wool produced in Australia are also shown; for the pre-war years and for 1946-47 and 1947-48 these values are based upon the average price of greasy wool realized at auction in the principal markets of Australia, while for 1943-44 to 1945-46 they are based upon the average appraised value plus certain adjustments as computed by the State Statisticians.

(b) Estimated.

(c) Subject to revision.

Production for 1948-49 has been estimated at 1,030 million lb., valued at £202,000,000.

4. **Care Needed in Comparing Clips.**—In comparing successive clips allowance must be made for the circumstance that, owing to climatic or other conditions, the time of shearing may be so far delayed in some areas that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth.

5. **Average Weights of Fleeces Shorn.**—The average weights of sheep and lamb fleeces shorn in each of the States of Australia and the Australian Capital Territory are shown in the following table for the five seasons 1934-35 to 1938-39 and each season 1943-44 to 1947-48 :—

AVERAGE WEIGHT OF SHEEP AND LAMB FLEECES SHORN.

6. **World Wool Production.**—The following table shows particulars of total production of wool in terms of greasy in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred and carpet type wool for the years 1938-39 and 1943-44 to 1947-48. The data for countries other than Australia were published by the Commonwealth Economic Committee in July, 1949, and were compiled from a questionnaire prepared by the Committee and the International Wool Textile Organization.

In 1947-48 Australia produced 26 per cent. of the world total of all types of wool, the share of the British Commonwealth exceeding 43 per cent. The principal wool producers other than Australia are Argentina with 13 per cent. of the world total, New Zealand, 10 per cent., United States of America, 9 per cent., U.S.S.R. (Russia), 7 per cent., and Union of South Africa, 5 per cent. World production of wool (all types) in 1947-48 was about 261 million lb. (6.6 per cent.) less than in 1938-39. This was due largely to the decline in the United States of America, amounting to 118 million lb. (26.5 per cent.), in the Union of South Africa, 75 million lb. (28.4 per cent), and in U.S.S.R. (Russia), 63 million lb. (20.8 per cent). In addition, production in the United Kingdom and a number of other European countries was lower, the net decline for Europe (excluding U.S.S.R.) as a whole being 125 million lb., or 24.0 per cent. Wool production in Argentina increased by 111 million lb., or 28.9 per cent.

Australia's wool clip is predominantly merino; New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. (Russia) is largely of the carpet type. While world production of merino wool has declined by about 17.6 per cent. since 1938-39, the production of crossbred types has risen slightly, by about 2.7 per cent. Carpet wool production has fallen by about 6.7 per cent.

(b) Unofficial and provisional estimates.

7. **War-time Contracts.**—(i) *Wool.* Details of the contract entered into between the Governments of Australia and the United Kingdom for the purchase of the surplus wool clip of Australia for the duration of the war and one full clip thereafter (1939-40 to 1945-46) will be found in Official Year Book No. 36, page 1106.

(ii) *Sheepskins.* Details of the war-time contract arrangements for the period April, 1940 to June, 1946 between the Australian and United Kingdom Governments for the purchase of Australia's exportable surplus of woolled sheepskins will be found in Official Year Book No. 37, page 875.

8. **Australian Wool Realization Commission.**—(i) *General.* The accumulation of Dominion wool in the hands of the United Kingdom Government as an outcome of the war-time arrangements and the disposal of these stocks concurrently with future clips were matters for discussion by a conference of officials and experts from the United Kingdom, the Commonwealth of Australia, the Dominion of New Zealand, and the Union of South Africa, held in London in April-May, 1945. At this conference it was decided that the only sound method of handling the gigantic task of disposing of these stocks was by means of a partnership between the countries concerned, under which the old wool would be marketed and the marketing of the current clip supported throughout the period of disposal of stocks. To ensure that stability of wool prices would be achieved, a reserve price appropriate to type and governed by the general trend of prices, and at which the wool would be bought in if commercial bidding did not attain the appropriate level, was agreed upon.

(ii) *United Kingdom-Dominion Wool Disposals Limited.* The formation, by the four Governments, of a Joint Organization under the title of "United Kingdom-Dominion Wool Disposals Limited" (commonly referred to as "J.O.") was, therefore, undertaken for the purposes of buying, holding and selling wool on behalf of the United Kingdom and the Dominion Governments concerned. The Australian Wool Realization Commission (*see par. (v) following*) is the Australian subsidiary of this organization.

(iii) *Stocks.* (a) *Total held by Joint Organization.* The stock of Dominion-grown wool in the ownership of the United Kingdom Government at 31st July, 1945 was transferred to the joint ownership of the United Kingdom Government and the Dominion Government concerned, and all wool subsequently acquired under the scheme was in the joint ownership of the United Kingdom and the Dominion concerned. Total stocks of United Kingdom wool transferred to the Joint Organization at 31st July, 1945 were:—

	Bales.			
Australian-grown wool	6,796,000
New Zealand-grown wool	1,777,000
South African-grown wool	1,834,000
				<hr/>
				10,407,000
				<hr/>

By 30th June, 1949 these stocks had been reduced to 1,700,486 bales, whose origins, locations and types are shown in the following table :—

WOOL STOCKS HELD BY JOINT ORGANIZATION, 30th JUNE, 1949.

(b) *Total held in Australia.* In the next table details are shown of the stocks of wool held in Australia by the Central Wool Committee and its successor, the Australian Wool Realization Commission, on the dates specified. The quantities, which distinguish between greasy, scoured and carbonized, refer to the amount of appraised wool actually held in store in Australia. Wool held by brokers prior to appraisalment and any held by woollen mills or growers is not included.

(a) 30th June.

(iv) *The Financial Plan.* Representatives of the four Governments meet prior to the opening of each wool year and at such other times as may be required, to agree upon the general level of reserve prices in the light of the advice of the Joint Organization.

Under the financial plan, the United Kingdom and the Dominion concerned each take up 50 per cent. of the original capital represented by the opening stock of wool grown in that Dominion to be handed over to the Joint Organization, that opening stock being taken in by the Joint Organization at its original cost, including f.o.b. payments less the amounts accumulated in the divisible profits accounts, which amounts, except in the case of South Africa, are estimated fully to cover depreciation of that stock. The balances in the divisible profits accounts are thus used to write down the opening stocks taken in by the Joint Organization. Payment of the Dominions' share of the original capital is to be made in four annual instalments. Towards these instalments are applied the Dominions' shares of the proceeds of sales by the Joint Organization and of the net profit during the interim period 1945-46. Each Dominion and the United Kingdom share equally in the provision of any further capital required by the Joint Organization during the operation of the scheme for payment for bought-in new wool of that Dominion.

Operating expenses are borne equally between the industry and the Joint Organization, the share of the industry being paid by the Dominion Governments primarily from the proceeds of a contributory charge on all sales of new clip wool. The share of the Joint Organization is met by deduction from the proceeds of sales by the Joint Organization before application to capital repayment.

The ultimate balance of profit or loss arising from the transactions of the Joint Organization in the wool of any Dominion will be shared equally between the United Kingdom and the Government of that Dominion.

An interim distribution which totalled £24,300,000 was made at the end of 1949 to Australian wool-growers from profits arising from the Wool Disposals Plan.

(v) *The Australian Subsidiary.* Pursuant to the provisions of the Wool Realization Act (No. 49 of 1945) the Australian subsidiary, known as the Australian Wool Realization Commission, was established and commenced operations on 15th November, 1945, the Central Wool Committee having administered the acquisition of the 1945-46 clip to that date. This Commission comprises a Chairman and an Executive Member (the two administrators of the Plan), four growers (two representatives of the Australian Wool-growers' Council and two representatives of the Wool Producers' Federation), one representative of the Federated Storemen and Packers' Union and two other persons chosen for their knowledge of the marketing of wool.

The Act also gives power to the Commission to appoint whatever advisory or technical committees it considers necessary, thus providing a formal basis for full co-operation between the Commission and the various facets of the trade. Accordingly the Commission early in 1946 appointed the following Committees :—

- Wool Selling Brokers' Advisory Committee ;
- Wool Buyers' Advisory Committee ;
- Woolen and Worsted Manufacturers' Advisory Committee.

(vi) *The Contributory Charge.* Associated legislation, viz., the Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 provide for a contributory charge to be imposed on all wool—

(a) produced in Australia ; and

(b) on or after a date to be fixed by proclamation—

- (i) sold by a broker at auction or otherwise ;
- (ii) purchased by a manufacturer ;
- (iii) subjected by a manufacturer (whether or not he is the producer or owner of the wool) to a process of manufacture ; or
- (iv) exported from Australia ;

the rate of the charge to be such percentage as is prescribed from time to time of the sale value of the wool, the percentage being such as is necessary to provide the amounts required to meet the share of the industry in the operating expenses of the Joint Organization, the payment of interest on monies expended by the Commonwealth in purchases of wool in pursuance of the Disposals Plan and unrecouped, and payment into the Wool Use Promotion Fund as provided under the Wool Use Promotion Act 1945. The plan did not require that the Contributory Charge should operate during the 1945-46 season. For further particulars of the Wool Contributory Charge and the amounts collected see Chapter XVII.—Public Finance, pages 769-70.

(vii) *Conclusion.* To sum up, the plan, with its associated legislation, amounts to the underwriting of the income of Dominion wool producers during the life of the disposal plan, protecting the growers against the serious fall in prices which would undoubtedly occur if the accumulated stocks were unloaded without control on the market, and it will prevent also undue price fluctuations during individual years and between one year and the next. In other words, it endeavours to guarantee the stability and solvency of the whole wool industry.

(viii) *Review of the Operations during 1945-46 Season.* The disposals plan provided that, for the wool year 1945-46, the method of purchase which had operated during the previous six years, namely appraisement and acquisition, should be continued and that the United Kingdom Government would be responsible for financing the purchase of all the wool so acquired, the management and sale of the 1945-46 clip being entrusted to the Joint Organization. Until 16th November, 1945, the Central Wool Committee conducted appraisements as in previous seasons, and then, with the same organization, the Australian Wool Realization Commission completed the appraisements for the remainder of the season. The total weight and value of wool appraised for the 1945-46 season are shown in the following table in comparison with similar figures for the previous six years.

WOOL APPRAISEMENTS : AUSTRALIA.

(a) Overall flat rate price paid by the United Kingdom Government. 1939-June, 1940.

(b) Period September,

As was recommended by the London Wool Conference 1945, the purchase price paid by the United Kingdom Government for the Australian clip (15.4531d. per lb. Australian currency) for the 1944-45 season was maintained for the 1945-46 season. It was agreed in communications with the United Kingdom and Commonwealth Governments that the selling prices for all sales of wool as from the 1st November, 1945, would be the United Kingdom Export Issue prices which were in force at that date.

With the accumulated stocks in Australia taken over at 31st July, 1945 by the Joint Organization and the 1945-46 clip of 2,865,717 bales, a total of 7,829,485 bales were available in Australia for supply to consumers during the 1945-46 season. In accordance with the announcement made by the Joint Organization on 24th June,

1946, that the sale of wool at fixed prices by or on behalf of the Joint Organization would cease on 30th June, 1946, no sales were booked in Australia after 30th June, 1946. However, the volume of sales rapidly accelerated towards the end of the year and during June, 1946, sales from wool within Australia totalled approximately 1,300,000 bales. The accounting period, however, for the 1945-46 season was from 1st August, 1945 to 31st July, 1946, and during this period estimated total sales amounted to 4,892,049 bales including 1,209,937 bales unshipped at 31st July, 1946.

(ix) *Wool classified according to Quality.* It has not been possible to undertake any analysis of the wool produced in Australia because the data necessary to make such a tabulation effective were lacking. Under war-time control, however, records were kept which made it possible to classify each lot appraised according to quality, degree of fault and combing or carding type for each of the years 1940-41 to 1945-46.

Since the resumption of auctions in 1946-47 this analysis has been continued by the Australian Wool Realization Commission, but the basis of the data has been changed to the catalogues of auction sales, excluding wool to which Joint Organization's reserves were not applicable, and not upon appraisement as previously. The following table provides a detailed analysis of wool appraised or sold at auction according to quality, for the years 1945-46 to 1948-49 compared with 1940-41, according to the records compiled by the Australian Wool Realization Commission. "Quality" ("64's, 60's, 58's", etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from 1 lb. of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1 lb. of tops (combed wool) of that particular wool.

CLASSIFICATION OF GREASY WOOL APPRAISED OR SOLD AT AUCTION: AUSTRALIA.

(a) Appraised greasy wool. (b) Greasy wool sold at auction, excluding that to which Joint Organization's reserves were not applicable.

9. *Wool Publicity and Research.*—Under the Wool Use Promotion Act of 1945, provision was made for improving the production and increasing the use of wool by the appointment of a Commonwealth Wool Adviser, the re-constitution of the Australian Wool Board, and the establishment of a Wool Consultative Council to advise the Ministers in regard to the aspects of Australian wool industry with which they are

associated. The Australian Wool Board consists of three representatives of the Australian Wool Growers' Council and three from the Australian Wool Producers' Federation. The Wool Consultative Council consists of the Wool Adviser and seven members appointed by the Minister to represent the various branches of the industry.

Funds are provided by the Wool Tax Equivalent from the Wool (Contributory Charge) Act supplemented by an equivalent contribution from Treasury funds—in all about £600,000 per annum. Of this sum an amount will be paid to the Wool Research Trust Account for scientific, economic and cost research while the balance is to be applied by the Wool Board for promotion and publicity.

The Commonwealth Scientific and Industrial Research Organization is responsible for scientific, biological and technical research while the economic aspects of the industry are the responsibility of the Commonwealth Department of Commerce and Agriculture. Provision is made for co-operation with State Departments of Agriculture and other organizations.

10. Consumption of Locally Processed Wool.—Particulars of the total consumption of wool in Australia are not available as quantities of manufactured woollen goods are imported whose contents in terms of wool cannot be ascertained. It is possible, however, to secure with reasonable accuracy the quantities of wool used in Australian factories and mills to produce woollen cloth and other woollen goods, such as blankets, rugs and knitted wear. Some difficulties arise in the aggregation of returns from individual mills concerned with only one process in manufacture and whose output constitutes the raw material of other mills, but the risk of duplication has been reduced to a minimum. Reference is made to the woollen mills established in Australia in Chapter XXIV. "Manufacturing Industry".

The factors used to convert scoured wool and woollen yarn processed in Australia into their greasy equivalent are now computed from the data furnished by woollen mills. In 1947-48 these factors were:—1 lb. of worsted yarn was taken to equal 2.16 lb. of greasy while the greasy equivalent of 1 lb. of scoured wool was 1.72 lb.

In the following table particulars are given of the quantity of wool processed in Australian woollen mills, cotton mills, hosiery mills and other factories during the years 1938-39 and 1943-44 to 1947-48:—

CONSUMPTION OF LOCALLY PROCESSED WOOL IN AUSTRALIA.

(lb.—in terms of greasy.)

Year.	Woollen Mills.	Cotton Mills.	Hosiery Mills.	Other Factories.	Total.
1938-39	52,375,530	533,335	13,327,245	2,208,201	68,444,311

11. Exports of Wool.—(i) *Greasy—Quantities.* Prior to the 1939-45 War, greasy wool exported overseas was sent principally to the United Kingdom and other European countries. In 1938-39, 41.9 per cent. of total shipments were sent to the United Kingdom, other important consignees being France, 20.4 per cent., Belgium, 13.1 per cent., and Japan, 9.1 per cent. During the war, exports to the United Kingdom declined and shipments to the European continent and to Japan virtually ceased, while the quantity shipped to the United States of America showed great expansion. Of the total quantity of greasy wool exported overseas during the five years ended 1945-46, 55.0 per cent. was sent to the United States of America and 36.2 per cent. to the United Kingdom. Shipments to European continental countries were resumed on a restricted

scale in 1945-46. With the return to auction sales in 1946-47, shipments of greasy wool to the European continent (mainly Belgium, France and Italy) reached record levels, while the quantity exported to the United States of America was the greatest since 1942-43. As a result, total exports during the year at 1,019.5 million lb. exceeded the average quantity exported during the five years ended 1938-39 by 256.6 million lb. or 33.6 per cent. In 1947-48 shipments to the United Kingdom showed a substantial rise, but the quantity consigned to the United States of America was only 39.3 per cent. of that shipped in the previous year, total exports of greasy wool being 245.2 million lb. or 24.0 per cent. less than in 1946-47. Of the total shipments in 1947-48, 35.8 per cent. went to the United Kingdom, 20.1 per cent. to France, 15.4 per cent. to the United States of America and 13.7 per cent. to Belgium. The following table shows the quantities of greasy wool exported, and the principal countries of recorded destination.

EXPORTS OF GREASY WOOL : AUSTRALIA.

(iii) *Total Value of Exports.* The value of wool exported from Australia during the five years ended 1947-48 averaged 35.9 per cent. of the value of the exports of merchandise of Australian origin, and during 1947-48 the proportion was 33.9 per cent. The value during the period under review, together with the principal countries to which wool was exported, is shown in the following table.

VALUE OF WOOL EXPORTS: AUSTRALIA.
(£A. f.o.b.)

Total ..	48,767,345	45,767,418	49,386,611	69,260,397	126,128,697	148,747,083

12. **Local Sales of Wool.**—Under pre-war conditions buyers from the United Kingdom, France, Belgium, Germany and other European countries, and from America, Japan, China and India attended the sales conducted in Sydney, Newcastle, Albury, Melbourne, Geelong, Ballarat, Brisbane, Adelaide, Perth, Hobart and Launceston. In 1946-47, following the cessation of the acquisition scheme which ended with the 1945-46 season, auction sales were resumed at those centres and commenced at Goulburn. Since the resumption of auction sales, there has been a greater quantity of wool disposed of locally and over 95 per cent. of Australia's production is now disposed of in this manner.

13. **Value.**—Wool is the chief factor in the pastoral wealth of Australia, and the nation's prosperity is largely dependent upon the satisfactory sale of the clip. During the three years ended 1948-49 the price of greasy wool sold in the selling centres of Australia averaged 37.35d. per lb. compared with the average United Kingdom contract price of 14.59d. per lb. during the years 1939-40 to 1945-46 and the average selling price of 11.5d. per lb. during the ten years ended 1938-39. The average for the nine years ended 1928-29 was 18d. per lb., and for the seven years ended 1913-14, 9d. per lb. The heavy decline in the price of wool which commenced in 1929-30 continued during the next three years. In 1933-34, prices rose in a remarkable manner, averaging 15.84d. per lb., compared with 8.72d. per lb. for the previous year, an increase of 81.6 per cent. A decline in 1934-35 was succeeded by a period of rising prices in the two years following, but in 1937-38 and in 1938-39 prices again receded.

As mentioned in paragraph 7 above, the price of wool during the 1939-45 War was determined by the British Government wool contract. The price fixed for the years 1939-40 to 1941-42 was 13.4375d. per lb., and for the years 1942-43 to 1945-46, 15.45d. per lb. With the return to auction sales since 1945-46, the average price of greasy wool sold rose to 24.49d. per lb. in 1946-47 and reached the record figures of 39.50d. per lb. in 1947-48 and 48.07d. per lb. in 1948-49. The average price in 1948-49 was 211 per cent. greater than the 1945-46 contract price and 318 per cent. above the average for the ten years ended 1938-39.

The effect of fluctuating wool values upon the national income is reflected in the following figures. Based upon appraisement in each State plus certain adjustments as recorded by the State Statisticians, the gross value of the wool clip for Australia for 1942-43 amounted to £73,017,000 and for 1943-44 to £75,124,000 compared with £42,043,000 realized during 1938-39 under open market conditions. The value of the 1944-45 and 1945-46 clips declined to £64,804,000 and £58,597,000 respectively, as a result of decreased production. In 1924-25 when the record pre-war price was realized, the value was £81,430,000, and in the year 1930-31, £34,804,000. With the remarkable increases in post-war wool prices, the value of the wool clip rose to £96,858,000 in 1946-47, to £156,998,000 in 1947-48 and to £202,000,000 in 1948-49.

The following table shows the average price in Australian currency, per lb. of greasy wool, determined by the British Government wool contract for the years 1943-44 to 1945-46 compared with the average auction-room price of greasy wool in Australia for 1938-39 and 1946-47 to 1948-49 as compiled by the National Council of Woollselling Brokers. This latter price represents the average price realized for all greasy wool of whatever type or quality marketed during the year indicated.

WOOL : AVERAGE MARKET PRICE PER LB.

(a) National Council of Woollselling Brokers.
sterling.

(b) The equivalent of the contract price of 12.34d.

Measured in terms of Australian, sterling, and gold currencies the approximate values of greasy wool per lb. during the years 1936-37 to 1938-39 and 1942-43 to 1948-49 were as follows:—

GREASY WOOL : AVERAGE VALUES PER LB.

(d.)

Year.	Australian Currency.	Sterling.	Gold Prices.
1936-37	16.48	13.16	8.03
1937-38	12.51	9.99	6.15
1938-39	10.39	8.30	4.84
1942-43	15.45	12.34	6.28
1943-44	15.45	12.34	6.28
1944-45	15.45	12.34	6.20
1945-46	15.45	12.34	6.10
1946-47	24.49	19.55	9.67
1947-48	39.50	31.54	15.59
1948-49	48.07	38.38	18.97

The average values shown in sterling and gold currencies have been calculated by converting the average prices shown in Australian currency on the basis of the average rates of exchange and the average gold prices between the months of September and June in each year. Though not exact these results will suffice for general purposes.

14. United Kingdom Importation of Wool.—The important position which Australia occupies in the supply of wool to the United Kingdom is indicated in the following statement of the quantities of wool imported into that country during 1938 and each year 1944 to 1948 from the principal wool-producing countries.

WOOL (a) : IMPORTS INTO UNITED KINGDOM.

Total Value (£'000 sterling)	40,996	35,400	35,384	37,744	59,882	86,335

(a) Greasy and scoured.

(b) Includes Pakistan.

Australian wool represented 53.8 per cent. of the total quantity imported into the United Kingdom during the five years ended 1948. New Zealand supplied 30.4 per cent. and South Africa 9.0 per cent. while the total quantity received from British countries constituted 98.0 per cent. of all United Kingdom imports.

15. **Principal Importing Countries and Sources of Supply.**—The previous issue of the Official Year Book (No. 37) included a table which furnished, in respect of the principal importing countries, details of their production and imports of wool for 1938, together with the chief sources of supply. Complete details are not yet available for later years.

§ 6. Trade in Hides and Skins.

1. **Extent of Trade.**—In addition to the hides and skins treated locally, considerable quantities are exported: the value of cattle and horse hides, and sheep and other skins sent overseas during the five years ended 1947-48 amounted to £52,984,317, or an average of £10,596,863 per annum.

2. **Sheepskins with Wool.**—The exports of sheepskins with wool, aggregating £21,365,065 during the five years above, constitute an important item in the values referred to in the preceding paragraph, although the largest export in this period was that of rabbit skins valued at £24,681,959. During 1938-39 France was the largest purchaser of sheepskins with wool, taking 74 per cent. of the total consignments, while the United Kingdom ranked next with 15 per cent., followed by Germany with 7 per cent. In 1947-48, France obtained 74 per cent. of total exports, and the United Kingdom 18 per cent. The exports of sheepskins with wool during each of the years 1943-44 to 1947-48 compared with the average for the years 1934-35 to 1938-39 were as follows:—

EXPORTS OF SHEEPSKINS WITH WOOL : AUSTRALIA.

Particulars.	Average, 1934-35 to 1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Number	12,009,135	3,220,448	6,716,400	18,811,654	18,189,641	11,232,934
Value £A. f.o.b.	2,779,523	1,000,386	1,489,602	4,363,835	7,090,560	7,420,682

3. **Sheepskins without Wool.**—Up to 1943-44 sheepskins without wool were exported chiefly to the United States of America. During the year mentioned this country accounted for 97 per cent. of the total shipments while the remaining 3 per cent. were exported to the United Kingdom, Canada and the U.S.S.R. There has, however, since been a decline in shipments to the United States of America and an increase in the quantities shipped to the United Kingdom and other countries; in 1947-48 the United States of America received 50 per cent. of total shipments; the United Kingdom 26 per cent. and other countries 24 per cent. Quantities and values for the five years 1943-44 to 1947-48 compared with the average for the years 1934-35 to 1938-39 are shown in the table hereunder:—

EXPORTS OF SHEEPSKINS WITHOUT WOOL : AUSTRALIA.

Particulars.	Average, 1934-35 to 1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Number	807,690	3,651,958	4,010,146	2,850,201	2,538,287	906,512
Value £A. f.o.b.	69,600	337,374	343,142	243,126	439,059	148,675

4. *Hides.*—(i) *Exports.* The export trade in cattle hides during 1947-48 was distributed as follows:—United Kingdom, £153,314; Italy, £69,718; Netherlands, £23,277; other countries, £66,253.

The exports during each of the five years 1943-44 to 1947-48 compared with the average for the years 1934-35 to 1938-39 are shown in the table below:—

EXPORTS OF CATTLE HIDES : AUSTRALIA.

Particulars.	Average, 1934-35 to 1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Number	956,552	171,421	157,432	189,863	117,164	101,681
Value £A. f.o.b.	791,730	273,044	206,925	229,542	328,713	312,562

Calfskins exported during the five years ended 1947-48 numbered 18,247 valued at £14,559. Exports of horse hides during the same period numbered 127,628, valued at £237,245.

(ii) *Imports.* The imports of cattle hides and calfskins are fairly large, the chief source of supply being New Zealand and the Pacific Islands. The quantities and values of cattle hides, including calfskins, imported into Australia during the years 1943-44 to 1947-48 compared with the average for the years 1934-35 to 1938-39 were as follows:—

IMPORTS OF CATTLE HIDES AND CALFSKINS : AUSTRALIA.

Particulars.	Average, 1934-35 to 1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

(a) Includes hare skins.

6. Marketing of Hides and Skins.—(i) *Sheepskins with Wool.* Details of the war-time agreement between the United Kingdom and Commonwealth Governments for the purchase by acquisition of the “exportable surplus” of woolled sheepskins in Australia were given in Official Year Book No. 37, page 886.

The contract with the United Kingdom expired on 30th June, 1946 and, since then sheepskins have been marketed principally at open auction with export freely permitted as in pre-war times.

Owing to the high world parity price levels of wool and pelts, sheepskin prices have been very high since the return to open marketing.

(ii) *Sheep and Lamb Pelts.* Pelt prices rose rapidly overseas in the war years, and by 1944 it had become essential to establish some form of marketing control in order to safeguard the Australian sheep leather tanning industry. The Sheep and Lamb Pelt Advisory Committee was established to allocate to tanners their current requirements from the production of Australian fellmongeries.

The Committee operated on a voluntary basis under the aegis of the Hide and Leather Industries Board.

The “two-price” problem continued in the post-war period and it was found necessary to introduce a Government subsidy arrangement based largely on the activities of the Committee. With the termination of the subsidy and the removal of price control on pelts the need for the Committee no longer existed and it has ceased to function. Pelts have reverted to open marketing without any Government control.

(iii) *Hides and Leather.* Late in 1939 it became necessary to introduce a scheme for the control of the marketing of hides and leather and suitable action was taken by Regulations under the National Security Act. The Australian Hide and Leather Industries Board was appointed to administer the scheme.

All cattle hides and yearling and calf skins were to be submitted for appraisalment in accordance with a Table of Limits prepared by the Board. On appraisalment they were acquired by the Board acting on behalf of the Commonwealth and thereupon became the property of the Commonwealth. The owners of the hides and skins immediately prior to acquisition received compensation at varying rates determined by the Minister from time to time. Hides and skins acquired by the Board were sold on behalf of the Commonwealth. Tanners’ purchases of hides were regulated and exports of hides, skins and leather were controlled. Further details of the war-time operations of the scheme will be found in Official Year Book No. 37, page 887.

World parity prices of hides and leather are still far above Australian domestic price levels and the Commonwealth Government found it necessary to continue in 1948 the marketing control scheme which had operated since 1939. However, the Commonwealth Government was not prepared to carry on the scheme after 31st December, 1948, under its extended war-time powers and it was supplanted in 1949 by a similar marketing scheme operated under uniform legislation passed by the Commonwealth and the six State Governments.

For the purpose of administering the scheme the Australian Hide and Leather Industries Board was re-constituted under the Commonwealth Hide and Leather Industries Act 1948.

(iv) *Rabbit Skins.* A marketing control scheme for rabbit skins was introduced under the National Security (Rabbit Skins) Regulations on 10th June, 1940. After the outbreak of war, rabbit skin prices rose sharply owing to the keen demand from overseas. In order that the prices of military and civilian hats in Australia might be kept at reasonable levels and that sufficient skins should be available to Australian hat manufacturers at prices which would enable them to produce hats at those price levels, a scheme of marketing control became necessary.

The Australian Rabbit Skins Board was appointed to administer the scheme. The basis of the scheme has been the payment to hat manufacturers of compensation equivalent to the difference between appraised prices in a Table of Limits prepared by the Board, which are based on a Commonwealth Prices Commission determination, and ruling open market prices.

Funds for the payment of such compensation were provided by collections from a levy imposed on the export of rabbit skins under the Rabbit Skins Export Charges Act 1940. From 1941 onward rabbit skin prices rose steeply, reaching a peak in 1946. Since 1946 they have declined to the present relatively low levels. The rate of export levy fluctuated according to the state of the Board's finances. In some periods the levy was entirely suspended, whilst the highest rate it reached was 18d. per lb. The imposition of the levy was finally suspended in 1948 and the scheme terminated in April, 1949.

§ 7. Tallow.

1. *Production.*—Australia's production of tallow is in excess of local requirements and considerable quantities are normally available for export. The recorded production in factories is incomplete as production in establishments which do not come within the definition of a factory is excluded. More complete details, but on a calendar year basis, are, however, available. These relate to production in all slaughtering establishments and are shown in the following table for each year 1943 to 1948.

TALLOW : PRODUCTION IN SLAUGHTERING ESTABLISHMENTS, AUSTRALIA.
(cwt.)

Type.	1943.	1944.	1945.	1946.	1947.	1948.
Edible	1,152,825	1,050,124	898,831	354,934	437,232	524,690
Inedible	315,423	300,017	222,533	712,840	618,990	670,631
Total	1,468,248	1,350,141	1,121,364	1,067,774	1,056,222	1,195,321

2. **Consumption.**—Details of net exports and consumption in factories are given in the following table for the five years 1943-44 to 1947-48 in comparison with 1938-39 :—

TALLOW : NET EXPORTS AND CONSUMPTION IN FACTORIES, AUSTRALIA.

(cwt.)

Particulars.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Net Exports ..	5560,241	5590,676	5421,573	146,445	73,744	87,689
Consumption by Factories	539,095	896,213	900,363	850,095	819,947	946,279

(a) Inedible only.

3. **Marketing.**—A modified control operates on the marketing of tallow, tallow products and derivatives. Exports are closely regulated. In respect of tallow shipped overseas the excess returns received over the fixed Australian domestic prices are paid by the exporters into a pool or equalization fund, from which a distribution is made to tallow producers generally.

The amounts available for distribution to tallow producers from the 1948-49 No. 5 Pool total over £1,600,000 and the general dividend will be in the vicinity of £15 per ton. A quantity and price arrangement has been made with the United Kingdom for sales in 1949-50.

CHAPTER XX.

AGRICULTURAL PRODUCTION.

NOTE.—Except where otherwise stated, the “agricultural” years hereafter mentioned are taken as ending on 30th June.

§ 1. Introductory.

A brief reference to the attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Official Year Book. (*See No. 22, p. 670.*)

§ 2. Progress of Agriculture.

1. *Early Records.*—In an “Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797”, Governor Hunter gives the acreage of crops as follows:—Wheat, 3,361 acres; maize, 1,527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops:—Wheat, 6,874 acres; maize, 3,389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 37 acres.

By the year 1850 the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area of crops declining from 491,000 acres in 1850 to 458,000 acres in 1854. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres. The largest increase took place in Victoria, which returned an area of 299,000 acres. For the same year South Australia had 264,000 acres in cultivation, Tasmania, 229,000 acres, and New South Wales, 223,000 acres.

2. *Progress of Cultivation.*—The following table shows the area of crops in each of the States and Territories of Australia at decennial intervals since 1860 and during each of the eleven seasons ended 1948–49, and on page 963 there is a graph showing the area of crops in Australia from 1860 onward:—

(a) Not available.

The progress of agriculture was practically uninterrupted from 1860 to 1915-16, when, as the result of a special effort to raise wheat during the 1914-18 War, 18,528,234 acres were cultivated in Australia. Four years later the area of crops declined to 13,296,407 acres owing to the accumulation of wheat stocks consequent upon the difficulty of securing freight space during the war years. After the termination of hostilities the area again began to expand and rose steadily to a new maximum of 25,163,816 acres in 1930-31. Thereafter the slump in wheat prices seriously depressed the agricultural industry and the area of crops receded to just under 20 million acres in 1935-36. Subsequently the area increased, and reached a maximum of 23½ million acres in 1938-39. Thereafter it declined to under 16 million acres in 1943-44, then rose in each succeeding year up to and including 1947-48, when 22.3 million acres were under crop. A fall to 20.6 million acres was recorded in 1948-49. Following the outbreak of war in 1939, the area under crop declined with each successive year until 1944-45, when the areas commenced to increase. This movement was contrary to the experience of the 1914-18 War when the decline did not occur until the third war-year. As the area under wheat in Australia constitutes a large proportion of the total areas cropped (62 per cent. during the five years ended 1948-49), fluctuations in the latter follow broadly the same pattern as changes in wheat areas.

3. **Area under Sown Pastures.**—In all the States there are considerable areas of grasses mainly sown on land from which scrub has been cleared or on land which it is desired to rest from cultivation. These areas, which are not included in "area of crops", have expanded from 5½ million acres in 1929-30 to approximately 14 million acres in 1948-49.

4. **Australian Agricultural Council.**—Arising out of a conference of Commonwealth and State Ministers on agricultural and marketing matters held at Canberra in December, 1934, a permanent organization known as the Australian Agricultural Council was formed. The Council consists of the Commonwealth Minister for Commerce and Agriculture and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principle functions of the Council are :—(i) the promotion of the welfare and development of agricultural industries generally; (ii) the improvement of the quality of agricultural products and the maintenance of high grade standards; (iii) to ensure, as far as possible, balance between production and available markets; and (iv) organized marketing, etc.

In addition, a permanent technical committee known as the Standing Committee on Agriculture was formed to act in an advisory capacity to the Council. Its functions are :—(i) to secure co-operation and co-ordination in agricultural research throughout Australia; (ii) to advise the Commonwealth and State Governments, either directly or through the Council, on matters pertaining to the initiation and development of research on agricultural problems; and (iii) to secure co-operation between the Commonwealth and States and between the States in respect of quarantine measures relating to pests and diseases of plants and animals, and to advise the Commonwealth and State Governments. The personnel of this Committee consists of the permanent heads of the State Departments of Agriculture, members of the Executive Committee of the Commonwealth Scientific and Industrial Research Organization, the Commonwealth Director-General of Health, the Secretary, Department of Commerce and Agriculture, the Director-General of Agriculture and a representative of the Commonwealth Treasury. The Council and the Standing Committee meet normally two or three times a year according to the nature and urgency of the problems to be discussed.

§ 3. Distribution, Production and Value of Crops.

1. **Distribution of Crops.**—The following table shows the areas in the several States and Territories of each of the principal crops for the season 1947-48. Similar details for the season 1946-47 appear in Part II. of *Production Bulletin* No. 41.

AREA OF PRINCIPAL CROPS, 1947-48.

(a) Not available. (b) Excludes 46,915 acres of pasture land sown to lucerne and 102,255 acres sown to oats, for grazing. (c) Not available for publication. Included with "All other Crops". (d) Incomplete.

2. **Relative Areas of Crops in States and Territories.**—The proportion of each of the crops cultivated to the extent of over 100,000 acres in the various States and Territories on the total area of crops for the season 1947-48 is shown in the next table. Similar details for the season 1946-47 appear in Part II. of *Production Bulletin* No. 41. In four of the States, namely, New South Wales, Victoria, South Australia and Western Australia, wheat-growing for grain is by far the most extensive crop. In Queensland the most extensive crops are green fodder, wheat and sugar-cane, and in Tasmania, green fodder, hay and potatoes.

As pointed out previously, wheat is the main crop in Australia, the area thereof, for grain only, representing over 60 per cent. of the total area of crops in 1947-48.

RELATIVE AREAS UNDER CROP, 1947-48.

(a) Market Gardens.

4. Weights and Measures.—The production of agricultural commodities in Australia is recorded either in terms of capacity or weight. When measured in terms of capacity the unit is the bushel of 2,218.192 cubic inches or gallon of 277.274 cubic inches. When measured in terms of weight, the unit adopted is either the long ton of 2,240 lb. (except in the case of flour, bran and pollard, when the short ton of 2,000 lb. is used), the hundred-weight (cwt.) of 112 lb. or pound (lb.).

The production of cereals and fruit is recorded in bushels, the production of wine in gallons, while hay, vegetables, grapes and industrial crops are measured by weight, generally in terms of long tons or cwt.

In the following table the weights adopted per bushel are given for the more important cereals, fruits, etc. Several types of cases are used for fruits, but in determining the average weights shown below, that with a capacity of 2,223 cubic inches was adopted. The packed weight of a bushel of fruit also is subject to considerable variation according to the kind and variety of fruit.

Data compiled by the State Departments of Agriculture made available to this Bureau were used in determining these average weights.

8. **Value of Production—Gross and Net.**—(i) *General.* Uniform methods for arriving at the gross and net values of production in the various States were finally determined at a Conference of Statisticians held in March, 1935. The returns for the year 1933-34 and subsequent years have been valued on the new basis, and a revaluation was made

for the years back to 1928-29. A more detailed reference to the value of production of agriculture and other industries in Australia as well as a brief explanation of the terms used will be found in Chapter XXVIII. "Miscellaneous".

In computing the net value of production no deduction has been made for the cost of maintenance of farm buildings and fences, nor for the depreciation of farm plant; consequently the figure stated is inflated to that extent.

GROSS, FARM AND NET VALUES OF AGRICULTURAL PRODUCTION, 1946-47 AND 1947-48.

§ 4. Wheat.

1. **Royal Commission on the Wheat Industry.**—A Royal Commission was appointed in January, 1934, to inquire into and report upon the economic condition of the industries of growing, handling and marketing wheat, and the manufacturing, distributing and selling of flour and bread. A searching inquiry was made by the Commission and the results of its investigations were submitted in a series of five reports. The first and second reports covered the wheat-growing industry, the third that of baking, the fourth the flour-milling industry, while the fifth, completed in February, 1936, dealt with the history of the Commission's investigations and traversed the principal recommendations submitted.

Reference to the financial assistance to the wheat industry will be found in § 20. Bounties, hereafter.

2. **Wheat Costs of Production Committee.**—A Wheat Costs of Production Committee was appointed by the Commonwealth Government in February, 1947, to enquire into and report upon:—(i) the reasonable costs of production of wheat per bushel in Australia's main wheat-growing districts, and (ii) whether basic items of costs could be established as an index to periodical variations in costs of the production of wheat. The Committee in its report to the Commonwealth Government in March, 1948, found that the cost of growing wheat in the Commonwealth was 6s. per bushel at sidings and advised that basic items of cost could be established as an index to periodical variations in wheat production costs.

3. **Licensing of Areas Sown to Wheat, and Acreages Sown.**—The licensing of areas sown to wheat throughout Australia during each of the seasons 1941-42 to 1948-49 was operated under the direction of the Wheat Stabilization Board. The area allotted to each grower was fixed in proportion to the average area normally sown by him, principally in the three years 1938-39 to 1940-41. Although licensing continued during the seasons 1945-46 to 1948-49, growers were permitted to plant without restriction in those years. In Western Australia, growers' acreages during 1942-43 were restricted to a maximum of two-thirds of their basic acreage which restriction continued during the 1943-44 and 1944-45 seasons. During 1945-46 no such restriction was imposed but where growers voluntarily restricted the area sown to five-sixths or less of their basic acreage, compensation equal to one-sixth of their basic acreage was payable subject to the qualification that half of the area licensed for wheat was cropped for grain.

In the following table supplied by the Wheat Stabilization Board the basic acreage (i.e., the area normally sown by growers, principally in the three years 1938-39 to 1940-41) and the areas licensed to grow wheat for grain are shown for each State and the Australian Capital Territory for the years 1944-45 to 1948-49. Details of the area sown as well as the percentage that these areas bear to the area licensed are also given.

The Wheat Industry Stabilization Board ceased to function on 31st December, 1948 and the licensing of wheat areas was discontinued from that date. The details of areas licensed and numbers of licences issued for the year 1948-49 shown in the table following are incomplete.

(a) Compulsorily restricted by one-third. (b) Not available. (c) Excludes Tasmania and Australian Capital Territory. (d) Includes areas temporarily licensed on temporary wheat farms. (e) Restriction not compulsory but compensation paid where area voluntarily restricted. (f) Incomplete.

4. Legislation relating to Wheat Industry.—(i) *Financial Assistance to Wheat Growers.* Details of financial assistance rendered by the Commonwealth Government to wheat growers between the years 1931-32 and 1944-45 were given on page 1296 of Official Year Book No. 37.

(ii) *Stabilized Marketing.* A detailed survey of legislation relating to stabilization of the wheat industry, including controls exercised during the 1914-18 and 1939-45 Wars and legislation establishing the permanent Wheat Stabilization Plan in 1948 were given in the Appendix to Official Year Book No. 37 (pp. 1295-1299).

(iii) *Wheat Stabilization Plan.* Briefly the principal provisions of the Wheat Stabilization Plan which is operated by the Australian Wheat Board conjointly with State Wheat Boards and similar authorities nominated by State Governments, are as follows :—

- (a) The Commonwealth Government has guaranteed a price for wheat grown and delivered to the Australian Wheat Board or other approved organizations for each season 1947-48 to 1952-53.
- (b) The price guaranteed was 6s. 3d. per bushel f.o.r. ports, bulk basis (this being related to costs of producing wheat in the 1947-48 season), subject to variation, as agreed upon by the Commonwealth Minister for Commerce and Agriculture in consultation with the appropriate State Ministers, in accordance with variations in the cost of producing wheat in subsequent seasons. Following reviews of wheat production costs, the guaranteed price was increased to 6s. 8d. per bushel f.o.r. ports, bulk basis for the 1948-49 season and to 7s. 1d. per bushel for the 1949-50 season. For the 1947-48 and 1948-49 seasons the price of wheat fixed for home consumption was the guaranteed price of 6s. 3d. and 6s. 8d. per bushel respectively, but for the 1949-50 season it remained unchanged from the previous year at 6s. 8d. per bushel. The additional 5d. per bushel payable to growers for wheat for home consumption in 1949-50 is being met by subsidy provided by the Commonwealth Government.

- (c) The guaranteed price applies in respect of the export from any one season's crop up to a maximum of 100 million bushels.
- (d) A Wheat Prices Stabilization Fund has been established by means of a tax on wheat exported. The tax applies when the export price is greater than the guaranteed price, the rate of tax being 50 per cent. of the difference between the two but not exceeding 2s. 2d. per bushel.
- (e) The Stabilization Fund will be drawn upon as required to meet the guaranteed price when this exceeds the export price. If amounts held in the Fund are at any time insufficient for this purpose, the deficiency will be provided by the Commonwealth Government from Consolidated Revenue.

(iv) *The Australian Wheat Board and the Stabilization Fund.* The Australian Wheat Board as reconstituted under the Commonwealth Wheat Industry Stabilization Act 1948, commenced to perform its functions under the Act on 18th December, 1948.

The provisions of the Commonwealth Wheat Stabilization Plan relating to the levy of a tax on wheat exported and the establishment of a Stabilization Fund were implemented by the Commonwealth Government under legislation passed in 1946 in respect of the 1945-46, 1946-47 and 1947-48 harvests, contributions to the Stabilization Fund amounting to about £7,000,000, £4,000,000 and £16,400,000 respectively. Contributions to the Fund from the 1948-49 harvest were approximately £12,500,000. Amounts contributed to the fund from the 1945-46 and 1946-47 harvests, which were equivalent to approximately 1s. 1½d. per bushel and 10½d. per bushel respectively, have been refunded to growers.

5. War-time and Post-war Marketing of Wheat.—(i) *General.* On page 908 of Official Year Book No. 37 an outline was given of the circumstances leading up to the establishment by the Commonwealth Government on 21st September, 1939 of the Australian Wheat Board under the National Security (Wheat Acquisition) Regulations.

(ii) *Australian Wheat Board.* Under the Wheat Acquisition Regulations the Board was empowered, subject to directions of the Minister for Commerce and Agriculture, to purchase, sell or dispose of wheat or wheat products, manage and control all matters connected with the handling, storage, protection, shipment, etc., of wheat acquired, and such other matters necessary to give effect to the regulations under which it was created. The Australian Wheat Board was reconstituted and vested with similar powers under the Commonwealth Wheat Stabilization Act 1948 for the purpose of administering the post-war Wheat Stabilization Plan (*see preceding Section*). The reconstructed Board commenced operations on 18th December, 1948.

(iii) *Wheat Acquired and Disposed of.* (a) *Wheat Acquired.* Particulars of wheat acquired by the Australian Wheat Board up to 30th November, 1949 are shown in the following table:—

AUSTRALIAN WHEAT BOARD : WHEAT ACQUIRED TO 30th NOVEMBER, 1949.

(a) Rail freight was deducted from 2nd payment. (b) This Pool refers to low grade wheat (under 54 lb. per bushel) which was segregated from other wheat received in No. 11 Pool. (c) Rail freight was deducted from 1st payment.

6. International Wheat Agreement.—Following a series of unsuccessful attempts extending over a period of years to secure an arrangement for the stabilization of international trade in wheat, an International Wheat Agreement was signed in Washington, D.C., United States of America, on 6th March, 1948 by 33 importing nations and the three exporting countries of Canada, United States of America and Australia. However, principally owing to the failure of the Government of the United States of America to ratify the Agreement within the prescribed time, it was allowed to lapse.

A further International Wheat Agreement was signed in Washington in March and April, 1949 by the representatives of 41 nations, comprising all the important wheat importing countries excluding Germany and Japan and the wheat exporting countries of Canada, United States of America, Australia, France and Uruguay. The 1949 Agreement is similar to that proposed in 1948, its stated objectives being "to assure supplies of wheat to importing countries and markets for wheat to exporting countries at equitable and stable prices".

The new Agreement covers a period of four years from 1st August, 1949 to 31st July, 1953, with provision for extension beyond that date, if desired. Under its terms, the five exporting countries who signed the agreement guarantee to sell 456.3 million bushels of wheat (including wheat flour as wheat) annually to the 37 importing countries specified, who in turn guarantee to purchase a similar quantity each year. Paraguay did not actually sign the agreement, reducing the number of importing countries who were signatories to 36, while Peru when signing specified a reduction in its guaranteed purchases shown in the original quotas. Details of the original quotas fixed in the Agreement are shown below. They do not include an amount of 70 million bushels which Germany agreed to purchase following its admission to the International Wheat Agreement in

1950. The source of this supply during 1950 was allocated as follows:—United States, 54 million bushels; Canada, 12 million bushels; Australia, 3 million bushels; and 1 million bushels to other exporters.

Japan's admission to the Agreement was rejected by the International Wheat Council. Purchases by this country will therefore be made outside the scope of the Agreement.

INTERNATIONAL WHEAT AGREEMENT: GUARANTEED ANNUAL SALES AND PURCHASES.

('000,000 Bushels.)

Exporting Country.	Guaranteed Annual Sales.(a)	Importing Country.	Guaranteed Annual Purchases.(a)
Canada	203.1	United Kingdom	117.1
United States of America	168.1	Italy	40.4
Australia	80.0	India	38.3
France	3.3	Netherlands (including In-	
Uruguay	1.8	donesia)	25.7
		Belgium	20.2
		Remaining 32 Importing	
		Countries	214.6
Total	456.3	Total	456.3

(a) Wheat and wheat flour as wheat.

The original quotas specified in the Agreement are subject to adjustment in the event of a country or countries failing to ratify, withdrawing from or being expelled from the Agreement or under such other special circumstances as are provided for in the Agreement. The quotas shown exclude wheat to be supplied to any Occupied Areas, for which the United States has accepted responsibility, this being outside the scope of the Agreement.

The Agreement fixes maximum and minimum prices between which transactions can be freely concluded and prices will move within the range prescribed in accordance with market conditions. But at the maximum price the exporting country must sell the quantity it has guaranteed to supply and at the minimum price the importing country must purchase the quantity it has guaranteed to buy.

The basic minimum and maximum prices fixed in the Agreement for No. 1 Manitoba Northern Wheat in bulk in store Fort William/Port Arthur in terms of Canadian currency at parity at 1st March, 1949 are shown in the following table. The approximate equivalent prices in terms of Australian currency at the exchange rates (average of buying and selling rates) operating prior to and from 19th September, 1949, the date on which Australian currency was devalued, are also shown.

INTERNATIONAL WHEAT AGREEMENT: MINIMUM AND MAXIMUM PRICES.

Crop Year August-July.	Minimum Price Per Bushel.			Maximum Price Per Bushel.		
	Canadian Currency.	Australian Currency.		Canadian Currency.	Australian Currency.	
		Prior to 19th September, 1949.	From 19th September, 1949.		Prior to 19th September, 1949.	From 19th September, 1949.
	\$	s. d.	s. d.	\$	s. d.	s. d.
1949-50 ..	1.50	9 4	13 5	1.80	11 2	16 1
1950-51 ..	1.40	8 8	12 6			
1951-52 ..	1.30	8 1	11 8			
1952-53 ..	1.20	7 6	10 9			

NOTE.—The £ (Sterling and Australian) was devalued and the price of gold in those currencies raised on 19th September, 1949.

The equivalent maximum price for Australian bulk f.a.q. wheat under the Agreement is—

- (a) The maximum price specified in the Agreement in Canadian currency converted into Australian currency at the prevailing rate of exchange (at present 16s. 1d. per bushel); or
- (b) The price f.o.b. Australia, equivalent to the c. and f. price in the country of destination of the maximum Canadian price specified above, computed by using currently prevailing transportation and exchange rates; whichever is the lower.

The minimum prices for f.a.q. Australian bulk wheat are the f.o.b. prices, Australia, equivalent to the c. and f. prices in the United Kingdom of the minimum Canadian prices specified above, computed by using current transportation and exchange rates.

Transactions between signatory exporting and importing countries at prices within the range will count towards fulfilment of the obligations assumed under the Agreement but any country is free to trade in wheat above the ceiling or below the floor price in respect of quantities additional to those covered by the Agreement.

A new International Wheat Council has been established to administer the Agreement. Its functions include adjustment to sale and purchase quotas as provided for in the Agreement and adjudication in the event of countries, either importers or exporters, finding difficulty in meeting their obligations under the Agreement.

Australia ratified the Agreement under the International Wheat Agreement Act 1949, which was assented to on 30th June, 1949. The Agreement came into operation as planned on 1st August, 1949.

7. **Wheat Farms.**—(i) *Number.* Particulars of the number of farms growing wheat for grain on 20 acres and upwards during each of the years 1939-40, 1940-41 and 1946-47 to 1948-49, compared with the average for the five years ended 1938-39, are shown in the following table. It should be noted that a farm worked on the share system or as a partnership is included as one holding only.

(ii) *Special Tabulations relating to Wheat Holdings.* With the co-operation of State Statisticians, a series of special tabulations relating to rural holdings was undertaken for all States for the year 1947-48. The tabulations, which covered, *inter alia*, a series of size classifications of wheat farms, have been published in detail in *Production Bulletin* No. 42—Part II., *Primary Industries and Total Recorded Production*. Particulars are shown below of the number of holdings growing wheat for grain, the area under wheat for grain and the production of wheat classified according to the size of the areas under wheat for grain for each State for the year 1947-48. A similar tabulation was made for the year 1935-39, a summary of the results being published in *Official Year Book* No. 33, pp. 374 to 377.

(a) Excludes Northern Territory and Australian Capital Territory.

8. Area, Production and Average Yield.—(i) *Area.* Wheat is the principal crop raised in Australia, and its progress since 1860 has been almost continuous. Prominent features in its early development were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress but its subsequent recovery was

assisted by the invention of mechanical appliances, the use of superphosphate as an aid to production, and the introduction of new and more suitable varieties for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion. The most serious interruptions in more recent years were those occasioned by the two World Wars and the economic depression of the early thirties.

As previously mentioned, any variation in the acreage sown to this cereal materially affects the total area of crops. The area and yield of wheat for grain in each State are given below for the years 1943-44 to 1948-49 in comparison with the averages for the decennial periods ended 1938-39 and 1948-49:—

WHEAT FOR GRAIN: AREA AND PRODUCTION.

A graph showing the expansion of the area sown to wheat for grain in Australia since 1860 appears on page 963 while a graph showing the distribution of areas growing wheat for grain throughout Australia in 1947-48 is shown on pp. 965-6. Similar graphs showing the distribution of wheat areas in 1924-25 and 1938-39 appeared in Official Year Book No. 22, p. 695 and Official Year Book No. 34, p. 451, respectively.

(ii) *Production.* Apart from the variations in the area sown, the size of the wheat harvest in Australia is largely determined by the nature of the season and inconsistencies in this respect are reflected in the yearly production.

It should be noted, however, that with improved farming methods, which include the proper tillage of the soil, rotation of crops, the growing of suitable varieties and the application of fertilizers, average yields per acre during four decades to 1940 have shown a continued improvement, and fluctuations in production have become less pronounced.

Australia's wheat production in 1947-48 was a record at 220.1 million bushels, representing an average yield of 15.86 bushels per acre. This was 75.3 million bushels more than the average for the decennium ended 1948-49 and 50.7 million bushels above the average for the ten years ended 1938-39. The record 1947-48 harvest was followed by exceptionally heavy crops of 190.7 million bushels in 1948-49 and 216.5 million bushels in 1949-50. The 1949-50 yield of 17.83 bushels per acre was a record.

(iii) *Decennial Averages, 1861-70 to 1940-49.* The following table shows the average area, production and yield per acre for decennial periods since 1861, together with the average wholesale price since 1871. Up to and including 1939 the price quoted represents the arithmetic mean of the annual averages at Melbourne (f.o.r. Williamstown), and may be accepted as fairly representative for Australia; from 1940 the price represents the average return to the grower for all wheat, bulk and bagged, f.o.r. ports basis.

WHEAT FOR GRAIN : AVERAGE AREA, PRODUCTION AND WHOLESALE PRICE, AUSTRALIA.

Decennium.	Area.	Production.	Yield per Acre.	Average Wholesale Price.
	'000 Acres.	'000 Bushels.	Bushels.	s. d.

(a) Not available.

(b) Subject to revision. See letterpress above.

(iv) *Average Yield.* In the next table will be found the average yield of wheat per acre for specified periods :—

**WHEAT FOR GRAIN : YIELD PER ACRE.
(Bushels.)**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Average, 1929-30 to 1938-39..	13.00	12.54	14.88	9.84	11.34	21.73	20.63	11.81
1943-44 ..	17.64	11.00	18.07	13.49	10.56	25.24	27.75	13.93
1944-45 ..	6.02	1.63	21.00	5.70	10.51	24.18	1.22	6.25
1945-46 ..	16.57	9.11	20.86	9.72	11.40	13.38	21.20	12.46
1946-47 ..	3.50	13.99	2.84	11.08	9.84	18.47	18.09	8.90
1947-48 ..	18.88	14.55	23.11	13.70	12.50	15.20	20.90	15.86
1948-49 ..	16.02	16.38	23.56	12.67	12.64	22.69	18.23	15.15
Average, 1939-40 to 1948-49..	13.01	12.64	18.31	12.03	11.66	18.76	18.67	12.64

Variation in the short-term average yield is chiefly due to the vagaries of the seasons. The best average yields for single seasons since 1901 were obtained in 1920-21, 16.08 bushels; in 1942-43, 16.78 bushels; and in 1949-50, 17.83 bushels.

The table in par. 8 (iii) above, which shows changes in the average yield per acre of wheat for decennial periods from 1861 to 1949 discounts seasonal fluctuations. This long-term comparison shows that the yield per acre of 12.77 bushels, obtained in the decennium 1861-70 from 831,000 acres of almost virgin soil in selected areas, was followed by a downward trend to 7.32 bushels per acre for the ten years 1891-1900. From this period onward, decennial yields per acre have improved, and for the decennium 1940-49 stood at 12.65 bushels. This improvement was associated with advances in farming practices such as (i) development of superior wheat varieties; (ii) judicious use of fertilizers; (iii) education in soil conservation and crop rotation; and (iv) increased use of machinery on wheat farms.

(v) *Relation to Population.* The main wheat-producing States of Australia are New South Wales, Victoria, South Australia and Western Australia. Queensland production normally approaches local demands, but Tasmania imports from the mainland to satisfy its needs, though partly in exchange it ships flour made from local wheat which is particularly suitable for biscuits. Normally the production of wheat greatly exceeds Australian requirements, and from half to three-quarters of the crop is exported overseas.

9. *Varieties of Wheat Sown.*—(i) *General.* The breeding of wheat suitable to local conditions has long been established in Australia. Farrar (1845-1905) did invaluable work in pioneering this field and the results of his labour and the continued efforts of those who have since followed him have proved of immense benefit to the wheat industry of Australia. Their efforts have resulted in better average yields, a greater uniformity of sample, with which has accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of the principal varieties grown during each season is restricted to about 40.

(ii) *States, 1948.* Particulars of the varieties of wheat sown and the areas thereunder were collected annually up to 1940. The collection was then suspended but was resumed in 1946-47. Details of the nine principal varieties sown in 1948 in the four main producing States and the percentage each bears to the total area sown are given in the following table.

WHEAT : PRINCIPAL VARIETIES SOWN, 1948.

(a) Includes not stated.

Continued progress in the breeding of new and better wheats has resulted in many changes in the varieties sown. Bencubbin, formerly a variety relatively unimportant outside Western Australia, was the leading wheat sown in 1948 in New South Wales, South Australia and Western Australia, although its popularity has declined to some extent since 1946. In Victoria, Quadrat is the principal variety sown and in 1948 it accounted for 47.2 per cent. of the total State area compared with 26.9 per cent. in 1946. The varieties which were second in importance in the respective States in 1948 were Gabo in New South Wales, Insignia in Victoria, Warigo in South Australia and Bungulla in Western Australia. The first three varieties occupied very minor places in 1946.

10. **F.A.Q. Standard of Wheat.**—The Chambers of Commerce in each of the four main wheat States each year determine the “f.a.q.” standard for the State. “F.a.q.” means “fair average quality”, and the standard is used as the basis for sales of the season’s crop. It represents the average quality for the season, and this average varies from year to year, and from State to State. “F.a.q.” is an Australian term, and the method differs from that of other countries which sell according to sample, or (as in Canada) according to grades which are fixed, and do not vary from year to year.

Samples of wheat are obtained by the Chambers of Commerce from the different wheat districts, and are mixed to give a representative sample of the whole crop. From this representative sample the f.a.q. weight is determined.

The following table sets out the f.a.q. weight of a bushel of wheat in each of the four main wheat-producing States from 1944-45 to 1948-49.

F.A.Q. STANDARD WEIGHT OF A BUSHEL OF WHEAT.

(lb.)

Year.				New South Wales.	Victoria.	South Australia.	Western Australia.
1944-45	63	63½	63	63
1945-46	63½	62½	61½	63½
1946-47	62½	63½	61½	63
1947-48	60½	60½	61	64½
1948-49	63½	63	63½	63½

11. **Price of Wheat.**—(i) *Home Consumption.* The price charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed is shown in the table below for the years indicated.

AUSTRALIAN WHEAT BOARD'S PRICE FOR WHEAT FOR HOME CONSUMPTION : AUSTRALIA.

(s. d. per Bushel, Bulk Basis).

Particulars.		1939.	1944.	1945.	1946.	1947.	1948.	1949.
For Flour	..	(a)	(b) 3 11	(b) 3 11	(b) 3 11	(b) 3 11	6 3	6 8
For Stock Feed	..	(a)	(c) 3 4	(c) 3 4	(c) 4 3	4 11	6 3	6 8

(a) Not available.

(b) Excluding 1s. per bushel recovered from Flour Tax and included in advances to growers.

(c) Disregarding subsidies paid by the Commonwealth Government which were included in advances to growers. These approximated 8d. per bushel.

(ii) *Export Wheat Prices.* (a) *Australian Wheat Board's Basic Selling Price.* Details of the export wheat prices are given in the table below for the years stated. Owing to changes which have occurred in the manner of selling export wheat, it is not possible to quote prices on a strictly comparable basis throughout the period covered by the table. The prices for 1939 represent the “weighted average shippers’ limits f.o.r. ports for growers’ bagged and bulk lots, Sydney, Melbourne and Adelaide.” Following the

acquisition of the 1939-40 and later wheat crops by the Commonwealth Government, it was no longer possible to record prices on this basis. The prices shown below for the years 1944 to 1949 are the basic export selling prices of the Australian Wheat Board (averages for bulk and bagged wheat, f.o.r. ports basis).

The quotations are more or less nominal. The market has been "broad" and wheat has been sold at times above and below this basic price, depending upon conditions of sale. Much of the wheat is sold at prices fixed under contract for delivery over lengthy periods. The prices shown below do not, therefore, necessarily represent the prices actually received for wheat currently being shipped. This matter is referred to in the succeeding paragraph.

AUSTRALIAN WHEAT BOARD'S SELLING PRICE FOR WHEAT FOR EXPORT: AUSTRALIA.

(s. d.)

Particulars.	1939.(a)	1944.	1945.	1946.	1947.	1948.	1949.
Average Price Per Bushel for Bulk and Bagged Lots f.o.r., ports basis	2 4	5 4	(b)	10 11	16 8	18 8	(c) 15 1

(a) Average of shippers' limits for growers' bagged and bulk lots, Sydney, Melbourne and Adelaide for eight months ended August, 1939. (b) Not available. The export price of wheat for January and February, 1945 averaged 6s. 5d. per bushel and 9s. 8d. for December. There were no sales for the other months of the year. (c) Average for seven months ended July, 1949. On 1st August, 1949, the price of wheat was fixed in accordance with the terms of the International Wheat Agreement.

(b) *Average Bushel Value of Wheat Actually Exported.* The following table shows for the years indicated the wheat price used in compiling the Export Price Index. The figure for 1939 represents the weighted average of shippers' limits f.o.r. ports for growers' bagged and bulk lots, Sydney, Melbourne and Adelaide. For 1946 and succeeding years the prices are based on the average actual realizations for current shipments, as it was impossible to determine representative average prices at which current sales were being effected because a very large proportion of Australia's exportable wheat was sold forward on long-term contracts at widely differing prices outside the basic price shown in the table above. The prices shown in the following table, therefore, give the average realizations f.o.b. for wheat shipped during the years shown.

AVERAGE VALUE OF WHEAT ACTUALLY EXPORTED : AUSTRALIA.

(s. d.)

Particulars.	1939.	1945.	1946.	1947.	1948.	1949.
Average actual realizations per bushel f.o.b. basis ..	2 4	(a)	10 1	14 5	18 0	15 1

(a) Not available.

(iii) *Payments to Growers.* Reference is made in par. 5 (v) of this section to the amounts paid to growers from the wheat pools.

(iv) *Prices under International Wheat Agreement.* Details of the minimum and maximum prices fixed under the terms of this Agreement and adjustments made following the devaluation of Australian currency in terms of gold are given in par. 6 of this section.

12. **Value of the Wheat Crop.**—The estimated value of the wheat crop in each State and in Australia during the seasons 1946-47 and 1947-48 is shown below. The values are on a gross basis at the principal market in each State and are based upon payments made to producers. Pending the finalizing of the accounts of the Australian Wheat Board these values are subject to revision.

WHEAT FOR GRAIN : VALUE OF CROP(a), 1946-47 and 1947-48.

(a) Gross value of total crop, including drought relief and also seed used on farm, but excluding value of straw.

13. **Production and Disposal of Wheat in Australia.**—In the following table details are given of the production of wheat and its disposal during each of the cereal years ended 30th November, 1945 to 1949 in comparison with the average for the three years ended November, 1937 to 1939. The particulars respecting local consumption refer to sales actually executed by the Australian Wheat Board, whilst those respecting exports represent actual shipments. (For particulars of production and exports from 1860 *see* graph, p. 964).

WHEAT : PRODUCTION AND DISPOSAL, AUSTRALIA.

('000,000 Bushels.)

Particulars.	Average, Three Years ended 30th Nov- ember, 1939.	Year ended 30th November—

Seed	14.6	2.13	12.9	1.69
Total as Wheat	53.7	7.82	68.6	8.97

(a) Ton = 2,000 lb.

(b) One ton (2,000 lb.) of flour is taken to be equivalent to 48 bushels of wheat.

15. **Exports of Wheat and Flour.**—(i) *Quantities.* The following table shows particulars of the exports of wheat and flour and total of both in terms of wheat for each of the years 1943-44 to 1947-48 compared with the average for the five years ended 1938-39. For the sake of convenience, flour has been expressed at its equivalent in wheat, 1 ton of flour being taken as equal to 48 bushels of grain. Wheat and flour have been imported to tide over lean seasons on only two occasions since 1900; in 1902-3 the wheat harvest was as low as 12,378,000 bushels, and wheat and flour representing 12,468,000 bushels of wheat were imported, whilst an equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season. During the five years ended 1947-48 exports in terms of wheat averaged 61,076,000 bushels compared with the average of 107,533,000 bushels for the five years ended 1938-39.

WHEAT AND FLOUR : EXPORTS FROM AUSTRALIA.

Year.	Quantity.				Value (£A'000. f.o.b.)

(a) Includes Palestine, 57,620 tons.

16. **Stocks of Wheat and Flour.**—Stocks of wheat and flour held by each State at 30th November in each year 1939 and 1944 to 1948, and the total in terms of wheat, are shown in the following table. The source of these data is the Australian Wheat Board, but, in order to maintain comparability with pre-war figures, adjustments have been made where possible to allow for stocks estimated to be held by merchants, bakers and farmers.

WHEAT AND FLOUR : STOCKS AT 30th NOVEMBER. (a)

" " Pollard ..	" "	284	280	286	256	316	326

(a) Includes wheatmeal for baking.

18. **Voluntary Wheat Pools.**—Details of voluntary wheat pools operating in Australia are given in issues of the Official Year Book prior to No. 33, 1940. These pools ceased to function when the Australian Wheat Board was created in September, 1939.

19. **World Area and Production of Wheat.**—The details in the following table of the world area and production of wheat by countries and continents have been compiled from official sources so far as they are available, but more particularly from the records published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Relations. The harvests shown for countries in the Northern Hemisphere are those garnered during the period March to October whilst those for the Southern Hemisphere cover the period November to February following. Figures in parentheses are unofficial estimates.

(a) The figures of areas are, as far as possible, those of areas harvested. (b) Estimated total including the area and production of countries whose particulars are not shown separately. (c) Average of less than five years. (d) Not available. (e) Production estimates for the U.S.S.R. for the years 1933 and 1934 have been reduced 15 per cent. to take account of heavy harvesting losses. (f) Excludes native cultivation.

20. Exports—Principal Countries.—The following table shows the net quantities of wheat exported from the chief exporting countries for the period 1934-38 and the years 1946-47 and 1947-48 according to statistics recently published by the Food and Agriculture Organization. In the years before the 1914-18 War the U.S.S.R. (Russia) was the outstanding contributor to the world's supply of wheat, followed by the United States of America. Owing to increased demands within their own borders, however, the net exports from U.S.S.R. have since become relatively unimportant, while those from the United States of America declined considerably during the period between the 1914-18 and 1939-45 Wars. Since 1945, however, wheat production in the United States of America has risen to record levels and net exports from that country have greatly increased and in 1947-48 represented more than half the world total. Canada is now the second largest wheat exporter, followed by Argentina and Australia.

While Australia's production of wheat ranges between 2 and 4 per cent. of the world's total, its exports represent up to 20 per cent. of the quantities shipped. Australia's relative share in world wheat exports in 1947-48 was however only about half that for the five years 1934-38.

§ 5. Oats.

1. *Area, Production and Average Yield.*—(i) *Area and Production.* Oats are usually next in importance to wheat amongst the grain crops cultivated in Australia, but while wheat grown for grain in 1947-48 accounted for 62.32 per cent., oats grown for grain represented only 9.45 per cent. of the area of crops. The acreage and production of oats for the years 1943-44 to 1947-48 and the averages for the ten year periods ended 1938-39 and 1947-48 are shown in the following table:—

OATS FOR GRAIN : AREA AND PRODUCTION.

1945-46.. ..	9,997	7,402	830	3,178	4,081	281	5	25,774
1946-47.. ..	2,046	6,402	79	2,780	3,656	595	8	15,566
1947-48.. ..	13,674	15,381	474	5,394	5,411	300	3	40,697
Average, 1938-39 to 1947-48 ..	5,971	6,283	278	3,042	4,313	468	6	20,361

The oat crop showed considerable variation during the past decennium, ranging from 8,970,000 bushels in 1944-45 to a record yield of 40,697,000 bushels in 1947-48, with an average for the period of 20,360,819 bushels. The 1947-48 oat crop exceeded the previous record in 1945-46 by 14,923,000 bushels or 57.9 per cent.

The principal oat-growing States are New South Wales and Victoria, which produce, on the average, more than half the total quantity grown in Australia. Western Australia and South Australia also produce considerable quantities, but in Queensland and Tasmania the output is small.

Oats are mainly used in Australia as feed grain. During the ten years ended 1947-48 the average annual quantity consumed by stock was about 14 million bushels, leaving a balance of about 3.5 million bushels for seed purposes, about 2 million bushels for oat-meal and a small quantity for the production of spirits and for malting. Normally the exports of oats are small but a large surplus was available from the heavy 1947-48 crop and shipments of over 6,800,000 bushels were made in that year.

(ii) *Average Yield.* The average yield per acre of oats varies considerably in the different States, being highest in Tasmania and lowest in South Australia. Averages for each of the seasons 1943-44 to 1947-48 and for the ten-year periods ended 1938-39 and 1947-48 are given in the following table :—

OATS FOR GRAIN : AVERAGE YIELD PER ACRE.

(Bushels.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Average 1929-30 to 1938-39 ..	15.66	12.03	12.77	7.91	10.77	28.15	22.35	11.80
1943-44 ..	18.84	8.69	17.60	10.22	11.07	30.69	24.67	12.52
1944-45 ..	3.23	1.85	17.64	3.94	9.57	28.41	2.65	4.41
1945-46 ..	16.20	14.47	20.75	8.60	10.30	20.15	9.21	13.22
1946-47 ..	3.67	14.10	5.09	11.02	8.60	26.24	12.81	9.01
1947-48 ..	22.45	23.66	18.97	17.47	10.94	21.09	6.86	19.33
Average 1938-39 to 1947-48 ..	13.33	11.92	15.99	9.71	10.43	25.39	13.35	11.72

The smallest average yield per acre ever recorded for Australia was that experienced in the abnormally dry season 1944-45, namely, 4.41 bushels, while the largest in the last ten years was that of the season 1947-48, amounting to 19.33 bushels per acre, this being the highest yield since 1920-21.

2. *Price of Oats.*—The average wholesale prices in the Melbourne market for oats of good milling quality for the years 1943-44 to 1947-48 in comparison with 1938-39 are shown in the following table :—

OATS : MELBOURNE AVERAGE WHOLESALE PRICES.

(s. d.)

Particulars.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Average price per bushel ..	3 5½	3 3	3 9½	3 11½	4 3½	4 0½

3. *Value of Oat Crop.*—The estimated values of the oat crop for the seasons 1946-47 and 1947-48 were as follows :—

OATS : VALUE OF CROP (a), 1946-47 and 1947-48.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1946-47—								
Aggregate value £	610,480	1,379,949	21,617	560,536	711,016	146,460	1,983	3,432,041

(a) Excludes the value of straw.

4. **Imports and Exports.**—The production of oats in Australia is sufficient to admit of a regular, though usually small, export trade. The quantities and values of oats imported into and exported from Australia during the years 1943-44 to 1947-48 compared with the average for the years 1934-35 to 1938-39 are shown hereunder :—

OATS : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
Average, 1934-35 to 1938-39	7,723	1,639	286,360	36,458	278,637	34,819
1943-44	643	176	88,040	18,618	87,397	18,442
1944-45	202	72	30,363	9,700	30,166	9,628
1945-46	1,231,085	251,878	429,163	112,931	801,922	138,947
1946-47	85	25	106,645	27,934	106,560	27,909
1947-48	177	61	6,803,427	3,945,807	6,803,250	3,945,746

NOTE.—Minus sign (—) denotes net imports.

The quantity of oats imported into Australia is usually not very large, although in 1945-46 imports exceeded exports by 801,922 bushels. Canada was the chief supplier. The previous year when imports exceeded exports was in 1927-28 (by 460,581 bushels) when New Zealand was the main supplier. In 1947-48 the principal countries of destination of the exports were the United Kingdom, Netherlands, France, Switzerland, Ceylon and Hong Kong.

5. **Oatmeal, etc.**—The production of oatmeal amounted in 1947-48 to 679,217 cwt. equivalent to about 3,800,000 bushels of oats, or about 9.3 per cent. of the total production. Prior to the 1939-45 War the exports of oatmeal were small, but in recent years a considerable export trade has developed and in 1947-48 the quantity shipped amounted to 344,759 cwt. or 50.8 per cent. of total production. Imports in 1947-48 amounted to 192 cwt.

6. **World Production.**—The world's production of oats for the year 1948, as compiled by the Food and Agriculture Organization of the United Nations, amounted to 4,326 million bushels. This quantity was harvested from 135 million acres, and represents an average yield of 32.04 bushels per acre. In comparison with this average return per acre, that of Australia for the same period (10.33 bushels) appears very small. Yields in excess of 40 bushels per acre are not uncommon and some European countries record averages in excess of 50 bushels per acre. The following table shows the world's production and average yield for the period 1935-39 and for each of the five years ended 1948.

OATS : WORLD PRODUCTION.

Year.					Area.	Production.	Average Yield per acre.
					Million Acres.	Million Bushels.	Bushels.
Average 1935-1939	139	4,336	31.26
1944	134	4,045	30.19
1945	128	3,865	30.20
1946	129	3,920	30.39
1947	128	3,672	28.69
1948(a)	135	4,326	32.04

(a) Preliminary. Subject to revision.

AREA OF CROPS—AUSTRALIA, 1860-61 TO 1947-48.

EXPLANATION.—The total area of crops is shown by the top curve in this graph, and the area of wheat by the bottom curve. The vertical distances between these curves and that in the centre indicate the areas of hay and other crops.

PRODUCTION AND EXPORTS OF WHEAT—AUSTRALIA, TO 1947-48.

NOTE.—The export figures for the years 1915-16 to 1920-21 do not represent the surplus available for export in each of these years because of the dislocation of shipping due to the 1914-1918 War. For these years the quantity consumed in Australia has been averaged and the balance taken as exports.

**AREA UNDER WHEAT FOR GRAIN
IN ACRES**

New South Wales	5,043,000
Victoria	3,227,000
Queensland	462,000
South Australia	2,375,000
West Australia	2,760,000
Tasmania	8,000
Aust. Cap. Terr.	5,000
Total	13,880,000

Average yield per acre, 15.86 bushels

§ 6. Maize.

1. *States Growing Maize.*—Maize is grown for grain chiefly in Queensland and New South Wales, the area so cropped in these States during the 1947-48 season being 214,682 acres, or 96 per cent. of the total for Australia. Of the balance, Victoria contributed 7,968 acres and Western Australia 90 acres. The climate of Tasmania is generally unsuitable for the growing of maize for grain although 7 acres were sown in this State in 1947-48. In the States mentioned the crop is also grown to a greater or lesser extent for green fodder, particularly in connexion with the dairying industry.

2. *Area, Production and Average Yield.*—(i) *Area and Production.* Although maize for grain is grown extensively in other countries, the area sown to maize for grain in Australia has averaged only about 284,000 acres during the past decennium. Compared with the previous year, the area in 1947-48 decreased by 36,990 acres and was considerably less than the comparatively large areas of 414,914 and 400,544 acres sown in 1910-11 and 1927-28 respectively.

The area and production of maize for grain in each State for the years 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are given in the following table:—

MAIZE FOR GRAIN : AREA AND PRODUCTION.

Average 1938-39 to 1947-48 ..	2,837	338	3,697	..	1	6,873

(a) 56 lb. per bushel.

The greatest production of maize in Australia was in 1910-11 when over 13,000,000 bushels were recorded. The production in 1947-48 amounted to 6,168,000 bushels compared with the average of 6,873,000 bushels for the decennium ended 1947-48.

(ii) *Average Yield.* (a) *Australia.* The following table gives particulars of the average yields per acre of the maize crops of the States for the seasons 1943-44 to 1947-48, and for the ten-year periods ended 1938-39 and 1947-48 :—

MAIZE FOR GRAIN : AVERAGE YIELD PER ACRE.
(Bushels.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Average, 1929-30 to 1938-39 ..	26.74	34.28	21.84	29.84	10.02	..	8.48	24.53
1943-44 ..	26.82	22.80	26.12	..	11.89	6.63	..	26.29
1944-45 ..	25.90	36.39	24.40	..	12.34	14.11	..	25.15
1945-46 ..	27.71	45.22	20.96	..	9.75	2.45	..	24.30
1946-47 ..	22.78	44.02	20.80	..	7.99	10.17	15.00	22.36
1947-48 ..	27.10	40.66	27.30	..	7.17	15.73	11.00	27.69
Average 1938-39 to 1947-48 ..	26.08	32.65	22.40	25.48	11.49	8.67	8.09	24.18

The average for Victoria is generally amongst the highest in the world. The area however, is comparatively small and is situated in specially favourable districts. The average for New South Wales is generally higher than that for Queensland.

• (b) *Various Countries.* The average for Australia for the past ten years was 24.18 bushels per acre. During 1947 the United States of America averaged 28.40 bushels, China Proper, 21.53 bushels, Argentina, 38.83 bushels, Rumania, 19.52 bushels and India, 10.89 bushels per acre.

3. *Price of Maize.*—The average wholesale price of maize in the Melbourne market is shown in the following table :—

MAIZE : AVERAGE PRICE, MELBOURNE.
(s. d.)

Particulars.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Average price per bushel	(a) 4 6½	8 0	8 4	8 5	8 6	8 6

(a) Sydney.

4. *Value of Crop.*—The values of the crop for the seasons 1940-47 and 1947-48 were as follows :—

MAIZE FOR GRAIN : VALUE OF CROP, 1946-47 and 1947-48.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
1946-47—								
Aggregate value ..£	927,040	146,416	1,044,458	..	646	40	11	2,118,611
Value per acre ..	£8/8/6	£18/1/3	£7/7/8	..	£6/11/10	£6/13/4	£5/10/0	£8/3/2
1947-48—								
Aggregate value ..£	873,940	162,467	1,303,326	..	503	60	4	2,340,300
Value per acre ..	£10/0/11	£20/7/10	£10/4/1	..	£5/11/9	£8/11/5	£4/0/0	£10/10/2

5. *Maize Products.*—Imports of cornflour into Australia are negligible. Exports of cornflour, which prior to the war were very small, increased considerably during the war years, the principal countries of destination being New Zealand and the Pacific Islands. In 1947-48 3,417,133 lb., valued at £104,944, were exported, compared with an

annual average of 36,761 lb., valued at £364, during the five years ended 1938-39. It should be noted that these figures include some quantities of "cornflour" made from wheat.

6. **Oversea Imports and Exports.**—Details of the imports and exports of maize for the five years ended 1947-48 compared with the five-yearly averages ended 1938-39 are shown below.

MAIZE : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
Average 1934-35 to 1938-39	20,609	4,209	57,432	8,571	36,823	4,362
1943-44	613	1,603	5,166	2,321	4,553	718
1944-45	4	1	4,682	2,237	4,678	2,236
1945-46	14	140	411	899	397	759

1947-48	313	1,036	547,536	627,565	547,223	626,529

7. **World Production.**—The following table furnishes particulars of the world's acreage, production and average yield per acre of maize, according to records published by the Food and Agriculture Organization of the United Nations:—

MAIZE : WORLD PRODUCTION.

Year.					Area.	Production.	Average Yield per Acre.
					Million Acres.	Million Bushels.	Bushels.
Average 1935-1939					216	4,725	21.88
1944					215	5,240	24.37
1945					209	4,752	22.74
1946					214	5,209	24.34
1947					215	4,772	22.20
1948 (a)					214	5,976	27.93

(a) Preliminary. Subject to revision.

The United States of America is the most important maize-producing country in the world and during the four years ended 1948 the area sown to maize in that country averaged 86.5 million acres or 40.6 per cent. of the world total. During the same period production averaged 3,100 million bushels or about 60 per cent. of the world total. About 85 per cent. of the production is fed to live-stock on farms, 10 per cent. is used for human food, and only a very small fraction—less than 1 per cent.—is exported.

§ 7. Barley.

1. **Area, Production and Average Yield.**—(i) *Area and Production.* The area sown to barley for grain expanded considerably during the ten years preceding the 1930-45 War—from 383,000 acres in 1930-31 to 836,000 acres in 1939-40. This increase was followed by a decline to 443,000 acres in 1943-44 but the area sown has increased in succeeding years and reached the record level of 839,000 acres in 1947-48. Victoria was originally the principal barley-growing State, but since 1913-14 its place has been taken by South Australia which accounted for 67 per cent. of the Australian acreage in 1947-48. Victoria was next in importance with 20 per cent. leaving a balance of about

13 per cent. distributed among the other States. The totals here given relate to the areas harvested for grain; small areas are sown for hay, but more considerable quantities are cut for green forage. These, however, are not included in this section. The area and production of barley for grain in the several States for the years 1913-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown in the following table:—

BARLEY FOR GRAIN: AREA AND PRODUCTION.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
AREA ('000 ACRES).

(a) 50 lb. per bushel.

(ii) *Average Yield.* The average yield of barley per acre varies considerably in the different States, being as a rule highest in Tasmania and lowest in Western Australia. Details for each State during the seasons 1943-44 to 1947-48 and for the ten-year periods ended 1938-39 and 1947-48 are given in the following table:—

BARLEY: YIELD PER ACRE.

(Bushels.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Average 1929-30 to 1938-39	16.62	18.44	16.67	17.29	11.89	25.21	18.88	17.29
1943-44 ..	18.91	12.95	19.38	19.34	11.80	27.54	17.20	17.14
1944-45 ..	4.33	2.79	21.01	8.85	11.61	29.42	2.90	8.19
1945-46 ..	17.16	13.00	24.70	17.12	10.03	18.28	21.42	15.90
1946-47 ..	4.01	16.82	7.52	16.78	7.88	24.88	..	15.50
1947-48 ..	22.13	21.78	25.18	27.32	11.79	26.79	19.50	24.87
Average 1938-39 to 1947-48	13.64	14.51	19.99	18.36	11.38	24.67	13.59	16.78

South Australia and Victoria were the only States producing more than 1,000,000 bushels on the average during the past decade, the yields being respectively 7,961,000 and 2,174,000 bushels.

(iii) *Malting (2-row) and Other (6-row) Barley.* (a) *Season 1947-48.* In the following table details of the area sown to barley of the 2-row or malting variety and 6-row or feed variety, and production therefrom for the season 1947-48 are given by States :—

BARLEY, MALTING (2-ROW) AND OTHER (6-ROW) : AREA AND PRODUCTION, 1947-48.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	A.C.T.	Aust.
AREA ('000 ACRES.)								
Malting (2-row) ..	15	150	12	522	38	8	..	745
Other (6-row) ..	8	15	5	40	25	1	..	94
Total ..	23	165	17	562	63	9	..	839
PRODUCTION ('000 BUSHEL).)								
Malting (2-row) ..	356	3,254	311	14,359	455	201	..	18,936
Other (6-row) ..	163	323	122	1,004	290	18	..	1,920
Total ..	519	3,577	433	15,363	745	219	..	20,856

Taking Australia as a whole, about 89 per cent. of the area of barley for grain in 1947-48 was sown with malting, or 2-row, barley while the remainder consisted of 6-row, or feed varieties. The proportion, however, varied considerably in the several States. The disposal of barley during the season 1947-48 was as follows: malt works, 4,976,615 bushels; flour and other grain mills, 889,876 bushels; distilleries, 175,296 bushels; exports, 8,050,016 bushels: leaving a balance of 6,764,129 bushels for feed, seed and other purposes.

(b) *Area, Production and Average Yield.* The following table sets out the acreage and production of malting and other barley in Australia during the seasons 1913-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48.

BARLEY, MALTING AND OTHER : AREA AND PRODUCTION, AUSTRALIA.

Season.	Area. ('000 Acres.)			Production. ('000 Bushels.)			Average Yield per Acre. (Bush.)		
	Malting (2-row).	Other (6-row).	Total.	Malting (2-row).	Other (6-row).	Total.	Malting (2-row).	Other (6-row).	Total.
Average 1929-30 to 1938-39 ..	428	67	495	7,480	1,073	8,553	17.49	16.03	17.29
1943-44 ..	357	86	443	6,397	1,192	7,589	17.89	13.96	17.14
1944-45 ..	500	114	614	4,188	841	5,029	8.38	7.38	8.19
1945-46 ..	593	106	699	9,581	1,536	11,117	16.15	14.52	15.90
1946-47 ..	663	85	748	10,558	1,038	11,596	15.92	12.27	15.50
1947-48 ..	745	94	839	18,936	1,920	20,856	25.43	20.46	24.87
Average 1938-39 to 1947-48 ..	588	103	691	10,178	1,426	11,604	17.30	13.81	16.78

During the past ten seasons the average area of barley of the malting, or 2-row class, was nearly six times the corresponding figures for barley of the 6-row, or feed class. The average yield per acre for the last ten-yearly period for malting barley was 25 per cent. higher than that for 6-row barley.

2. **Australian Barley Board.**—Following the outbreak of war in 1939, the Australian Barley Board, representative of the industry, was formed, and the Commonwealth Government acceded to its request to acquire the entire 1939-40 barley crop, which was placed under the control of the Board. A pool was established from which proceeds were distributed with appropriate margins for different grades of barley.

The Board is responsible for the marketing and storage of barley, and, like the Australian Wheat Board, has appointed licensed receivers to receive grain on its behalf and to act as agents for all local and oversea sales.

Following the decision of the Commonwealth Government not to acquire barley in smaller producing States after 1941-42, the Governments of Western Australia and Queensland established State Barley Boards to control marketing in these States.

Particulars of the barley acquired and sold, and of advances made to growers by the Australian Barley Board in respect of the 1943-44 to 1947-48 crops are given in the following table. The Commonwealth Government did not acquire barley after the 1947-48 crop and the Victorian and South Australian Governments formed a joint board under the same name as the former Commonwealth board to market the 1948-49 crops of the two States. Details of this acquisition are also shown in the table below.

**AUSTRALIAN BARLEY BOARD : BARLEY ACQUIRED, SOLD, ETC.,
TO JANUARY, 1950.**

Pool.		Quantity Acquired.	Quantity Sold.(a)	Total Advances made per Bushel on 2-row No. 1 Grade.		Total Payments to Growers.
				'000 bushels.	s. d.

(a) Excludes the value of straw.

5. **Imports and Exports.**—Australian exports of barley during the five years ended 1947-48 averaged 2,441,000 bushels, South Australia being the principal exporting State. Particulars of the Australian overseas imports and exports for the years 1943-44 to 1947-48 together with the average for the five years ended 1938-39 are shown in the following table :—

BARLEY : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 Bushels.	£	'000 Bushels.	£	'000 Bushels.	£

1947-48	1	8,050	8,134,000	8,050	8,133,999

NOTE.—Minus sign (—) denotes net imports.

In addition to barley grain, there is also an export of Australian pearl and scotch barley, the total for 1947-48 amounting to 27,588,057 lb., valued at £884,919, and consigned mainly to Italy, Singapore and India.

6. **Malt.**—(i) *Production.* The production of malt in Australia is sufficient to meet local requirements and to provide a margin for export as indicated below. Details of the quantity of grain used and the production of barley and other malt are given in the following table.

MALT : GRAIN USED AND MALT PRODUCED, AUSTRALIA.

Year.	Barley Malt.		Wheaten and Oaten Malt.	
	Grain used.	Malt produced.	Grain used.	Malt produced.
	Bushels.	Bushels.(a)	Bushels.	Bushels.(a)
1938-39	3,729,730	3,620,909	(b)	111,728
1943-44	3,915,925	3,822,215	221,739	196,153
1944-45	3,568,981	3,512,957	291,909	286,844
1945-46	3,734,780	3,596,004	241,992	229,811
1946-47	4,669,729	4,563,920	173,772	158,387
1947-48	4,976,615	4,879,145	186,772	170,877

(a) 40 lb. per bushel.

(b) Not available.

(ii) *Imports and Exports.* The surplus production of malt in Australia, after meeting local requirements, is shipped chiefly to the Far East and New Zealand. Details of imports and exports for the years 1943-44 to 1947-48, together with the average for the five years ended 1938-39 are given in the next table :—

MALT : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
Average 1934-35 to 1938-39 ..	248	133	108,798	37,780	108,550	37,647
1943-44	19,695	9,756	19,695	9,756
1944-45	27,390	12,521	27,390	12,521
1945-46	15,040	6,590	15,040	6,590
1946-47	20,673	8,023	20,673	8,023
1947-48	12,920	14,159	12,920	14,159

7. **World Production.**—In comparison with the barley production of other countries, that of Australia is extremely small. World production in 1948 is placed at 2,388 million bushels, the main producers being U.S.S.R. (Russia), China and the United States of America. Australian production in that year was less than one per cent. of the world total.

The following table shows the latest available details of the world's acreage of barley, together with the production and average yield per acre, according to the results compiled by the Food and Agriculture Organization of the United Nations :—

BARLEY : WORLD PRODUCTION.

Period.					Area.	Production.	Average Yield per Acre.
					Million Acres.	Million Bushels.	Bushels.
Average 1935-1939	114.2	2,338	20.47
1944	108.6	2,180	20.07
1945	105.3	1,911	18.15
1946	103.0	2,016	19.57
1947	110.7	2,122	19.17
1948(a)	116.1	2,388	20.57

(a) Preliminary. Subject to revision.

§ 8. Rice.

Rice growing is almost entirely concentrated in Asia and the extent to which this crop is grown in other countries is relatively small. In Australia experimental rice cultivation was carried on at the Yanco Experimental Farm in New South Wales for a number of years before 1924-25, but it was not until that year that an attempt was made to grow the crop on a commercial basis, 16,240 bushels being produced from 153 acres, or an average of 106 bushels per acre. Favoured by tariff protection and high average yields, the development of rice culture in the Murrumbidgee Irrigation Area made rapid progress, and production soon equalled Australian requirements and later provided a margin for export.

The area which growers may plant is subject to control. Each year representatives of the Rice Marketing Board, rice growers, the Department of Agriculture and the Water Conservation and Irrigation Commission of New South Wales meet to decide the maximum area which growers may plant in the following season. Because of war-time demands the areas sown were expanded, but the extent of any expansion is determined by the limits imposed by the quantity of water available.

Consequent upon the outbreak of war in the Pacific in 1941 and the enemy occupation of the rice producing countries north of Australia, the demand for rice was so great as to be beyond the capacity of the industry. From August, 1942 civilian consumption in Australia was prohibited, except in the case of invalids, hospitals, resident Asiatics and other priorities, and the total production was diverted to service needs and for the feeding of natives in the south-west Pacific area. Towards the end of 1950 the distribution of rice reverted to the trade, and supplies have been made available for general consumption.

For the five years ended 1938-39 the area sown to rice in the Murrumbidgee Irrigation Area averaged 22,800 acres. No marked expansion occurred until after Japan's entry into the war in 1941. The area was increased to 34,300 acres in 1942-43 and to 36,500

acres in 1943-44. This expansion was not sufficient to meet the war-time demand and new areas in the Wakool and Borenembah Irrigation Districts of New South Wales were developed, bringing the total area for the State and for Australia to 40,090 acres in 1943-44. Owing to water shortage the area sown in 1944-45 fell to 24,596 acres, but rose to 28,372 acres in 1945-46 and to 31,995 acres in 1946-47. A decline to 26,208 acres was recorded in 1947-48. The production of rice in the Wakool District was suspended in 1946-47 and 1947-48 but was resumed in 1948-49.

The production of paddy rice reached its highest level in 1943-44 with more than 4 million bushels or an average yield of just under 100 bushels per acre. In 1944-45 it dropped to nearly 1.7 million bushels or 68.8 bushels per acre due to water shortage arising from severe drought conditions. In 1947-48 production amounted to 2.7 million bushels or an average of 102.1 bushels per acre.

Prior to 1938-39 the greater part of Australia's export of rice was consigned to the United Kingdom, but, because of shortages in Pacific areas arising from war damage in south-east Asia, exports from Australia have been diverted mainly to the islands in this region.

Details relating to area, production, and trade for the years 1943-44 to 1947-48 compared with the averages for the years 1934-35 to 1938-39 are shown in the following table:—

§ 9. Sorghum for Grain.

1. Area, Production and Average Yield.—The growing of sorghum for grain on an extensive scale is a recent development in Australia. No details of the area and production of this cereal are available prior to 1939-40 but the output was of little importance. The climatic conditions of Queensland and northern New South Wales are particularly suited for the growing of sorghum and the development so far has been restricted to these areas, but more particularly to Queensland which accounts for the greater portion of the area sown. The grain produced is fed to live-stock and is becoming an important source of supply for supplementing other coarse grains for the feeding of live-stock. Other sorghums are grown in Australia mainly as green fodder, hay and for the production of brush for broom manufacture. Details of these are included in § 14 and § 19 hereinafter. Particulars of the area and production of sorghum grown for grain are given in the following table.

GRAIN SORGHUM : AREA, PRODUCTION AND YIELD, AUSTRALIA.

(a) Not available.

(b) Queensland only.

2 Queensland-British Food Corporation Project.—Early in 1948 an agreement was entered into between the Queensland Government and the Overseas Food Corporation of the United Kingdom Government to develop selected areas of Central Western Queensland for the growing of grain sorghum for pig-raising in Queensland and/or for export to the United Kingdom, and for sunflower and possibly other oilseed production. The Queensland-British Food Corporation was established in April, 1948 with head-quarters in Brisbane, some 300,000 acres of land being initially acquired for the project. The land acquired comprises the pastoral property known as "Peak Downs" and other similar properties in the Central Western District of the State and is estimated to embrace about 180,000 acres of arable land. The first year's operations of the Corporation consisted of developmental work, the seeding of 29,286 acres of grain sorghum and the sowing of small areas with sunflower and other experimental crops on the "Peak Downs" property for 1949 cropping. The ultimate target of the Corporation is the establishment of 250,000 acres under cultivation and the raising of pigs on an appropriate scale for export to Britain. In addition, it is planned to run other stock on areas of the properties acquired by the Corporation which are suitable only for grazing.

§ 10. Other Grain and Pulse Crops.

In addition to the grain crops already specified, the principal other grain and pulse crops grown in Australia are navy beans, blue peas and rye.

The areas of crops of blue peas and navy beans for the season 1947-48 were 7,662 acres and 3,595 acres respectively, giving yields of 4,431 tons and 653 tons, or averages of 0.58 tons and 0.18 tons respectively per acre. Navy beans are grown chiefly in New South Wales, Queensland and Victoria in that order, but in other States the quantity produced is negligible. The production of blue peas is almost entirely restricted to Tasmania which now accounts for over 90 per cent. of the total area and production for Australia. Blue peas are exported in considerable quantities to the United Kingdom, the chief exporting State being Tasmania.

The total area of rye in Australia during the season 1947-48 was 36,072 acres, yielding 181,937 bushels, or an average of 5.04 bushels per acre, as compared with the average of 6.85 bushels for the last ten seasons. Of the total area sown to rye in 1947-48, about 69.4 per cent. was in South Australia, 22.6 per cent. in Victoria, and 5.5 per cent. in Western Australia.

§ 11. Potatoes.

1. Area, Production and Average Yield.—(i) *Area and Production.* Victoria possesses peculiar advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavorable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands, the south-western and Gippsland districts. Tasmania comes next in order of acreage sown, although the production exceeded that of Victoria in some of the war years. New South Wales occupies third place in acreage and production. The area for these three States accounted for 80 per cent. of the total for Australia in 1947-48.

The area sown and production of potatoes in each State during the years 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown hereunder:—

1946-47	61,303	223,782	22,599	29,212	36,042	170,621	518	544,077
1947-48	65,535	184,882	29,299	34,181	40,908	142,746	716	497,967
Average 1938-39 to								
1947-48	56,851	186,152	25,776	32,096	35,242	167,610	452	504,179

The area sown to potatoes averaged 129,605 acres during the ten years ended 1938-39 and rose to 146,542 acres for the decennium ended 1947-48. After the outbreak of war in the Pacific in December, 1941, the area sown to potatoes rose rapidly and reached a peak of 241,803 acres in 1944-45. This was followed by a sharp fall to 176,079 acres in 1945-46 and to 144,729 acres in 1946-47. The area sown in 1947-48 was 145,629 acres.

The expansion during the war years was necessary in order to meet the large demand for potatoes by Australian and Allied Servicemen based upon Australia and to maintain supplies for civil needs. As a result, production rose to the record level of 881,049 tons in 1944-45. The production recorded for 1947-48 represented a decline of 43.5 per cent. from the war-time peak.

(ii) *Average Yield.* Average yields for each State for the seasons 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown hereunder:—

POTATOES : AVERAGE YIELD PER ACRE.

(Tons.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	A.C.T.	Aust.
Average 1929-30 to								
1938-39	2.30	2.75	1.64	2.50	4.73	2.72	2.09	2.71
1943-44	2.18	3.09	2.10	4.02	4.14	3.60	7.06	3.12
1944-45	2.32	3.67	1.85	5.11	4.36	4.26	4.96	3.64
1945-46	2.70	3.66	2.21	3.96	4.87	4.20	4.87	3.67
1946-47	2.88	3.97	2.14	4.72	5.18	3.95	4.93	3.76
1947-48	2.99	3.11	2.75	5.51	5.84	3.53	6.23	3.42
Average 1938-39 to								
1947-48	2.50	3.52	2.10	4.69	4.96	3.76	4.86	3.44

Compared with the average yield per acre obtained in other countries, that returned for Australia is low; the production in New Zealand, for example, in 1946-47 averaged 5.81 tons per acre from an area of about 20,000 acres, as compared with 3.76 tons per acre in Australia from 144,729 acres.

(iii) *Relation to Population.* The average annual production of potatoes for the last five seasons was 85 tons per 1,000 of population. In Tasmania, where this crop is of far greater importance in relation to population than is the case in any other State, the production per head in 1906-7 was nearly a ton, while for the last five seasons it has averaged almost 18 cwt. due to the abnormally high production during the war years, in one of which, 1944-45, it averaged 1.4 tons per head. Details for each State for the 1938-39 and 1943-44 to 1947-48 seasons are as follows:—

POTATOES : PRODUCTION PER 1,000 OF POPULATION.
(Tons.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.

1946-47 ..	21	110	21	46	73	669	32	72
1947-48 ..	22	89	26	52	80	545	40	65

2. *Gross Value of Potato Crop.*—The estimated gross value of the potato crop of each State for the seasons 1946-47 and 1947-48 is given in the following table:—

POTATOES : VALUE OF CROP, 1946-47 and 1947-48.

Value.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1946-47 ..								
Aggregate value£	904,220	2,479,641	357,817	398,312	453,300	2,132,763	7,640	6,733,603
Value per acre£	£12.88	£11.19	£13.10	£10.10	£10.05	£2,700	£72.15	£10.10
1947-48 ..								
Aggregate value£	1,032,180	2,251,590	468,784	446,944	548,208	1,784,320	11,273	6,543,200
Value per acre£	£17.12	£15.18	£13.10	£12.10	£12.17	£1,112	£10.10	£11.17

3. *Consumption.*—The annual consumption of potatoes in Australia during each of the three years 1946-47 to 1948-49 amounted to 440,000 tons, 450,200 tons and 403,500 tons respectively, or 133.0 lb. 132.0 lb. and 115.9 lb. per head of population respectively. These figures exclude the quantities used for seed, which averaged about 60,000 tons annually over this period. Consumption during the three years ended 1938-39 averaged 318,500 tons (103.8 lb. per head of population) excluding 37,000 tons for seed. New South Wales, Queensland and, in some seasons, South Australia do not produce the quantities necessary for their requirements and must import from Tasmania and Victoria which have a surplus.

4. *Australian Potato Committee.*—Full details of the war-time potato marketing scheme operated under the National Security (Potatoes) Regulations by the Australian Potato Committee were shown on p. 929 of Official Year Book No. 37. The Committee ceased to function as from the close of the 1947-48 season.

In the following table details of the quantities of potatoes received and the manner of their distribution are given for the years ended 31st October, 1944 to 1948 according to the records of the Committee. The details shown exclude quantities which did not come within the Committee's control.

AUSTRALIAN POTATO COMMITTEE : RECEIVALS AND DISPOSALS OF POTATOES, AUSTRALIA.

(a) Partly estimated.

5. **Post-war Marketing.**—Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948 with the completion of sales of the 1947-48 crop.

The 1948-49 crops have been marketed by Boards established in the respective States under State legislation. Although the State Boards operate separately they have a working arrangement for the interstate marketing of potato crops.

6. **Imports and Exports.**—Prior to the 1939-45 War, small quantities of potatoes were exported, principally to the Pacific Islands and Papua. Since the war an expanded export trade has been developed, principally with Eastern countries including Singapore, Ceylon, Hong Kong and Indo-China. Details showing the trade for the years 1943-44 to 1947-48 and the period 1934-35 to 1938-39 are given in the following table :—

POTATOES : IMPORTS AND EXPORTS, AUSTRALIA.

§ 12. Onions.

1. Area, Production and Average Yield.—Australia's supply of onions comes chiefly from Victoria which accounted for 62.5 per cent. of the total area and 71.6 per cent. of the quantity produced in 1947-48. Queensland came next with nearly 22.1 per cent. of the area and 14.9 per cent. of the production, leaving a balance of about 15.4 per cent. of area and 13.5 per cent. of production distributed among the remaining four States. The Victorian crop consists almost entirely of brown onions of good keeping qualities, and the bulk of the crop is grown in a small section of the Western Division of the State, where soil conditions have been found to be particularly suitable for onion growing on a commercial scale. Onion production in 1947-48 was a record at 85,997 tons and exceeded the average for the ten years ended in 1947-48 by 39,102 tons or 75.9 per cent. The yield per acre in 1947-48 was 8.00 tons, this also being a record. Details of the area, production and average yield per acre are given in the following table for the years 1943-44 to 1947-48 together with averages for the ten-year periods ended 1938-39 and 1947-48.

Details of the area and production of fresh vegetables other than potatoes and onions are given in § 18.

2. **Gross Value of Onion Crop.**—The gross value of the onion crop is shown in the following table for the years 1938-39 and 1943-44 to 1947-48.

ONIONS : GROSS VALUE, AUSTRALIA.

Year.				Total Production.	Gross Value of Crop.	Average value per ton.	Average value per acre.
				Tons.	£	£ s. d.	£ s. d.
1938-39	18,372	305,744	16 12 10	45 11 7
1943-44	46,922	695,909	14 16 7	68 7 2
1944-45	66,512	1,129,246	16 19 7	94 19 10
1945-46	66,793	961,111	14 7 9	77 9 2
1946-47	44,597	744,332	16 13 10	79 12 8
1947-48	85,997	1,244,771	14 9 6	115 15 8

3. **Consumption.**—Details of the estimated total production and consumption of onions for the three years ended 1938-39 and each year 1946-47 to 1948-49 are shown in the following table.

ESTIMATED TOTAL PRODUCTION AND CONSUMPTION OF ONIONS : AUSTRALIA.
(’000 Tons.)

Particulars.				Average 1936-37 to 1938-39.	1946-47.	1947-48.	1948-49.
Estimated total production(a)	46.3	51.6	94.0	65.1
Imports	2.8	0.1
Total	49.1	51.7	94.0	65.1
Exports (including Ships’ Stores)	4.0	7.5	18.5	12.2
Estimated Wastage	4.5	2.4 (b)	18.5	2.8
Estimated Consumption	40.6	41.8	57.0	50.1
Estimated Consumption per Head of Population	13.2	12.5	16.7	14.4

(a) Includes estimates for “self-suppliers.”

(b) Includes quantities used for dehydration.

4. **Imports and Exports.**—Onions are the only root crop, other than potatoes, in which any considerable overseas trade is carried on by Australia. During the five years ended 1947-48, 98 tons, valued at £1,952 were imported, principally from New Zealand, while during the same period the exports, which amounted to 36,203 tons, valued at £694,001, were shipped mainly to Canada and the Pacific Islands.

§ 13. Hay.

1. **General.**—(i) *Area and Production.* As already stated, the chief crop in Australia is wheat grown for grain. In most years hay is next in importance but in 1947-48 it was third to oats (for grain), the area of the latter crop constituting a record.

Nevertheless, the 1947-48 hay area represented 8.8 per cent. of the total area cropped. A graph showing the area sown to hay since 1860 appears on page 963. In most European countries the hay consists almost entirely of meadow and other grasses, but in Australia a very large proportion consists of oats, wheat and lucerne. The area and production of hay of all kinds in the several States during the years 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown below :—

1947-48 ..	978,236	1,042,438	132,694	443,659	267,901	137,648	5,182	3,007,758
Average 1938-39 to 1947-48 ..	792,130	1,092,696	116,407	506,520	346,960	132,756	4,126	2,991,595

Owing to various causes, the principal being the variation in the relative prices of grain and hay and the favourableness or otherwise of the season for a grain crop, the area of hay is liable to fluctuate considerably. The area under hay in Australia during the season 1915-16, 3,597,771 acres, was the largest on record, whilst the average for the decennium ended 1947-48 was 2,490,563 acres.

(ii) *Average Production per acre.* During the last ten years Queensland and Tasmania show the highest average production per acre, although the area sown in these States is small. For the same period the lowest yield for Australia as a whole was that of 10.6 cwt. per acre in 1944-45, while the highest was that of 30.6 cwt. in 1947-48. The average for the decennium was 24.0 cwt. Particulars for the several States for the seasons 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are given hereunder :—

(a) Includes barley and rye hay.

For all States and the Australian Capital Territory combined the proportions of the areas sown to the principal kinds of hay in 1947-48 were 44 per cent. for oats, 37 per cent. for wheaten, 11 per cent. for lucerne, and 18 per cent. for other hay. In that year, oats hay predominated in the States of Victoria, South Australia and Western Australia, wheaten hay in New South Wales, and lucerne in Queensland.

2. **Value of Hay Crop.**—The following table shows the value, and the value per acre, of the hay crop of the several States for the seasons 1946-47 and 1947-48 :—

HAY : VALUE OF CROP, 1946-47 and 1947-48.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1946-47—								
Aggregate value	£ 3,065,430	4,122,770	1,286,607	1,198,395	874,432	1,016,300	22,200	11,586,134
Value per acre	£5/12/2	£6/1/8	£18/19/9	£3/12/9	£3/3/0	£9/15/5	£7/9/4	£5/15/6
1947-48—								
Aggregate value	£ 7,059,990	5,303,943	1,405,612	1,523,014	890,448	874,060	38,625	17,095,692

3. **Farm Stocks of Hay.**—Details of stocks of hay held on farms are now collected at the annual census of farm production. Particulars of stocks so held at 31st March in each year 1944 to 1948 are given in the table below.

STOCKS OF HAY HELD ON FARMS.

(Tons.)

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1944 ..	522,294	859,302	107,375	403,002	140,494	89,010	2,246	2,123,723
1945 ..	189,986	460,369	71,162	200,790	184,321	82,736	606	1,189,970
1946 ..	504,521	1,026,581	86,722	307,494	156,841	78,414	2,123	2,162,606
1947 ..	226,926	1,019,728	58,507	388,993	156,908	113,740	950	1,965,752
1948 ..	825,821	1,059,842	96,158	478,142	164,425	95,147	3,676	2,723,211

The decrease in stocks at 31st March, 1945 resulted from the disastrous drought which occurred during 1944-45.

4. **Imports and Exports.**—Under normal conditions hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not figure largely amongst the imports and exports of Australia. During 1947-48, 9 tons were imported, while the exports amounted to 4,249 tons, valued at £49,458.

§ 14. Green Fodder.

1. **Nature and Extent.**—Considerable areas are devoted to the growing of green fodder, mainly in connexion with the dairying industry. These crops may be cut for feeding to live stock as green fodder or may be fed off to stock as green forage. Included with the latter are areas which may have been sown with the intention of harvesting for grain, but which, due to adverse seasonal conditions, showed no promise of producing grain or even hay and were fed off to live stock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities of barley, sorghum, maize, rye and sugar-cane also are so used. In 1917-18 the area under green fodder (1,705,321 acres) consisted of oats (868,026 acres), lucerne (192,426 acres), wheat (112,779 acres), sorghum (76,668 acres), maize (57,061 acres), barley (49,433 acres), rye (22,457 acres), sugar-cane (4,510 acres) and other crops (321,961 acres). Particulars concerning the area of green fodder in the several States during each of the years 1943-44 to 1947-48 are given in the following table together with the average for the periods of ten years ended 1938-39 and 1947-48 :—

GREEN FODDER : AREA.

(Acres.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Average 1929-30 to 1938-39	482,989	120,355	347,804	106,820	189,332	24,255	656	1,272,211
1943-44	782,265	112,880	600,181	269,645	446,803	51,592	1,430	2,204,802
1944-45	647,187	73,159	622,268	262,394	388,466	48,087	1,679	2,043,240
1945-46	541,810	63,311	581,905	189,882	288,206	138,540	2,094	1,805,748
1946-47	462,894	49,059	543,030	121,800	319,181	103,607	2,091	1,602,262
1947-48	488,028	46,100	511,115	141,452	400,100	116,482	2,044	1,705,321
Average 1938-39 to 1947-48	541,338	83,074	510,249	208,488	330,215	52,221	1,204	1,726,789

2. **Value of Green Fodder Crops.**—The value of these crops is variously estimated in the several States, and the Australian total for the season 1947-48, excluding Western Australia, may be taken approximately as £3,518,000.

§ 15. Sugar-cane and Sugar-beet.

1. **Sugar-cane.**—(i) *Area.* Sugar-cane for sugar-making purposes is grown only in Queensland and New South Wales, and much more extensively in the former than in the latter State. Thus, of a total area of 344,914 acres of sugar-cane grown for this purpose in Australia for the season 1947-48, there were 328,486 acres or about 95 per cent. in Queensland. This latter area is made up of 215,378 acres cut for crushing, 14,705 acres cut for plants, and 93,403 acres left to stand-over or young cane on areas not ready for cutting. Sugar-cane growing appears to have commenced in Australia in or about 1862, as the earliest statistical record of sugar-cane as a crop is that which credits Queensland with an area of 20 acres for the season 1862-63. In the following season the New South Wales returns show an area of 2 acres of this crop. The area of cane in New South Wales reached its maximum in 1895-96 with a total of 32,927 acres. Thenceforward, with slight variations, it fell gradually to 10,490 acres in 1918-19, but from that year it expanded until 1924-25, when about 20,000 acres were planted. Since 1924-25, the area has fluctuated between 15,000 acres and 21,000 acres, the average for the ten seasons ended 1947-48 amounting to 17,781 acres. In Queensland, although fluctuations in area are manifest, the general trend has been upwards, but, because of the contingencies arising from war, the area under sugar in that State has been lower since 1940-41, but an increase of over 6 per cent. occurred in 1947-48. In 1939-40 Queensland's acreage under cane reached its highest level, namely, 353,996 acres. The area of sugar-cane in Australia for the seasons 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown in the following table:—

SUGAR-CANE : AREA.
(Acres.)

Season.	New South Wales.			Queensland.			Australia.

(ii) *Productive and Unproductive Cane.* The areas shown in the preceding table do not include the small acreage cut for green fodder, which in Queensland in 1947-48 amounted to 4,030 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and "stand-over" cane as well as a small quantity required for plants. Thus the season in which the highest acreage is recorded may not show the greatest area of productive cane cut for crushing.

(iii) *Production of Cane and Sugar.* For Queensland, statistics of the production of sugar-cane are not available prior to the season 1897-98. In that season the total for Australia was 1,073,883 tons, as against the maximum production of 6,313,369 tons in 1939-40.

The average production of cane during the ten seasons ended 1947-48 was 4,881,037 tons, and of raw sugar 690,790 tons. Particulars of the total production of cane and sugar for the years 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are as follows :—

SUGAR-CANE ; PRODUCTION OF CANE AND SUGAR.

(Tons.)

Season.	New South Wales.		Queensland.		Australia.	
	Cane.	Sugar.	Cane.	Sugar.	Cane.	Sugar.
Average 1929-30 to 1938-39	241,402	30,317	4,461,988	626,789	4,703,390	657,106
1943-44	290,354	37,442	3,397,017	400,423	3,687,081	523,865
1944-45	200,050	26,423	4,398,268	643,520	4,598,318	669,943
1945-46	166,069	21,220	4,551,971	644,661	4,718,040	665,881
1946-47	309,605	39,768	3,717,330	512,086	4,026,935	551,854
1947-48	267,261	33,560	4,150,986	571,694	4,418,247	605,254
Average 1938-39 to 1947-48	288,459	38,004	4,592,578	658,786	4,881,037	690,790

The production of raw sugar in Australia in 1947-48 amounted to 605,254 tons manufactured from 4,418,247 tons of cane, the maximum production for earlier years being 928,676 tons recorded in 1939-40. This decline in production arose from war-time contingencies such as labour shortage and insufficient fertilizers. In addition, variations in seasonal conditions were contributing factors. There was a remarkable recovery in sugar production in 1948-49, the record quantity of 942,899 tons of raw sugar (94 net titre) being crushed from 6,707,530 tons of cane.

Official annual data are not available regarding the total number engaged in the sugar industry in Queensland, other than the number of separate holdings growing cane (0,424 in 1947-48) and of employees in sugar mills (4,762 in 1947-48).

According to data obtained from the population census of 30th June, 1947, the number of persons engaged in the sugar-cane industry in New South Wales and Queensland was as follows :—

SUGAR-CANE : NUMBER OF PERSONS ENGAGED IN GROWING AND HARVESTING, CENSUS, 30th JUNE, 1947.

Particulars.	New South Wales.		Queensland.		Total Persons.
	Males.	Females.	Males.	Females.	
Employer	59	12	2,289	161	2,521
Self-Employer	274	5	4,199	71	4,549
Employee (on Wages or Salary)	697	2	6,921	28	7,648
Other (including not stated)	52	1	1,298	7	1,358
Total	1,082	20	14,707	267	16,076

(iv) *Average Production of Cane Sugar.* Owing to climatic variation, comparison between the average yields of cane per productive acre in Queensland and New South Wales cannot be accurately made except on an annual basis. In New South Wales the crop matures in from 20 to 24 months, whereas in Queensland a period of from 12 to 14 months is sufficient. Allowing for the disparity in maturing periods the average annual yields of cane per productive acre during the ten years ended 1947-48 were 18.51 tons for New South Wales, and 17.96 tons for Queensland. Similarly, the yields of sugar

per acre crushed for the same period were estimated at 2.44 tons and 2.58 tons respectively. Apart from the consideration mentioned above, the yields of cane and sugar per acre crushed for Australia for the ten years ended 1947-48 were 19.97 tons and 2.85 tons respectively, as compared with 19.73 tons and 2.76 tons for the decennium ended 1938-39.

1947-48 ..	37.57	4.72	7.96	19.27	2.65	7.26	19.86	2.72	7.30
Average 1938-39 to 1947-48..	33.94	4.47	7.59	19.46	2.79	6.97	19.97	2.85	7.01

(v) *Quality of Cane.* The quantity of cane required to produce a ton of sugar varies with the variety planted, the district and the season. For the ten years ended 1947-48 it required on the average 7.01 tons of cane to produce 1 ton of sugar, or 14.27 per cent. of its total weight, as compared with 7.15 tons for the ten years ended 1938-39. As the result of the systematic study of cane culture in Queensland and improvements in field and mill methods the sugar content of the cane has been considerably increased, and in 1937-38 only 6.78 tons of cane were required to produce one ton of sugar. It is believed that this is the highest sugar content obtained anywhere in the world.

The Bureau of Sugar Experiment Stations in Queensland is rendering useful service to the sugar industry by advocating and demonstrating better methods of cultivation, the more scientific use of fertilizers, lime, etc., and by producing and distributing improved varieties of cane.

(vi) *Production and Utilization.* Details of the production and utilization of raw sugar for the three years ended 1938-39 and each year 1946-47 to 1948-49 are shown below. It should be noted that the details of sugar production refer to the annual periods shown, without regard to the season in which the sugar was produced; they include beet sugar. Consumption is shown in terms of refined sugar, including that consumed in manufactured products.

RAW SUGAR : PRODUCTION AND UTILIZATION, AUSTRALIA.

Year.	Changes in Stock.	Production—Raw.	Exports. (a)	Miscellaneous Uses. (b)	Consumption in Australia (a)	
					Total (c)	Per Head. (c)

Total (c)	123,883	197,658	195,336	206,262	227,430	241,219

(a) Includes Condiments, Pickles, etc. (b) Includes sugar consumed in the industrial and heavy chemicals and dehydrated fruit and vegetables industries. (c) Excludes raw sugar used in wineries and distilleries, details of which are not available for publication.

(viii) *Control of Cane Production in Queensland.* Agreements between the Commonwealth and Queensland Governments have fixed the price of sugar in Australia from time to time. Under the latest agreement, the wholesale price of refined sugar in each of the capital cities was fixed at £33 4s. per ton (4d. per lb. retail) for the five years ended 1951. On the 3rd December, 1947, the wholesale price fixed under this agreement was increased to £37 6s. 8d. per ton (4½d. per lb. retail).* The net proceeds of all sugar sold in Australia and sugar sold abroad are pooled and a uniform price per ton is paid to the mills. This pooling is made possible by the acquisition by the Queensland Government of all sugar produced in the State, under legislation which has been in force since 1915. The small New South Wales production (about 5 per cent. of the whole) is also acquired by the Queensland Government by private agreement.

Sugar production, which in 1923 had scarcely been sufficient to cover Australian requirements, grew very rapidly in subsequent years. In 1925 the Queensland Government took steps to prevent, as a general rule, new land from being opened up for cane production. During that year 56 per cent. of the sugar production was consumed in Australia and 44 per cent. exported. After 1925, production remained stable for some years. In 1929 the operations of the pool, which had hitherto received at a uniform price all sugar offered it by the mills, were re-organized. After 1920, mills received the full pool price for sugar up to the amount of their previous maximum production only. Any further supplies were acquired at export price only.

Between 1929 and 1939 the export price was generally less than half the pool price. In spite of this, production increased by 72 per cent. during that period. In 1939, in view of the fact that the International Sugar Agreement imposed certain restrictions on the volume of Australian exports, the Queensland Parliament passed further legislation limiting the pool to 737,000 tons in respect of production in Queensland. Any production in excess of this was to be acquired at a penalty price. This tonnage was divided up in quotas between the mills, on the understanding that the mills would allocate quotas of production to individual farmers. Proclamations issued by the Queensland Government, however, permitted the harvesting of the whole of the crops for the seasons 1939 to 1948. In 1948 the pool was limited to 874,000 tons.

* See p. 991 for later increase.

2. **Sugar-beet.**—Victoria is the only State growing beet for sugar, although 5 tons of sugar-beet were produced from 1 acre in Tasmania during 1942-43. Particulars of acreage and production for Victoria for the years 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown in the following table:—

SUGAR-BEET : AREA AND PRODUCTION, VICTORIA.

Particulars.		Average 1929-30 to 1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.	Average 1938-39 to 1947-48.
Area sown	.. acres	3,312	836	485	108	753	553	1,865
Production	.. tons	36,694	6,975	3,200	975	9,170	6,362	14,061
Average yield per acre	.. "	11.08	8.34	6.60	9.03	12.18	11.50	7.54
Sugar produced	.. "	4,642	704	1,014	584	1,679

During the 1939-45 War the area under sugar-beet declined steadily from 4,268 acres in 1938-39 to 108 acres in 1945-46 but increased to 753 acres in 1946-47. There was a further decline to 553 acres in 1947-48. Much of this decline was due to the diversion, as a war-time measure, of many areas to the production of vegetables. The mill at Maffra ceased operations at the end of 1943 but re-opened to treat the 1946-47 crop.

3. **Sugar Bounties.**—Reference is made to the various Acts in connexion with sugar bounties and sugar excise tariffs in early issues of the Official Year Book. (See No. 6 pp. 394-6.)

4. **Sugar Purchase by Commonwealth Government.**—The steps taken by the Commonwealth Government in connexion with this matter are also referred to in the Official Year Book. (See No. 18, p. 720.)

5. **Sugar Agreement in Australia—Embargo on imports, etc.**—Reference was made in Official Year Book No. 37 (pp. 940, 941) to the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. The agreement at present covers the period up to 31st August, 1951.

6. **International Sugar Agreement.**—Delegates of 21 Nations representing 90 per cent. of producers met in London and entered into an agreement on 6th May, 1937, providing for the regulation of the production and marketing of sugar in the world during a period of five years from 1st September, 1937. The object of the agreement was to ensure an adequate supply of sugar at a price not exceeding the cost of production, including a reasonable profit to efficient producers. For this purpose, each exporting country was given a basic annual export quota which would be increased in proportion to any expansion in sugar consumption. By this means and by limitations on stocks and measures to encourage more consumption it was hoped that the International Sugar Council, which was established to administer the agreement would be able to hold in proper balance the supplies and requirements of sugar. The export quota originally allotted to Australia was 400,000 long tons. This figure could be increased, however, where the delivery from any British Colony fell short of its quota. In such circumstances, the deficiency could be allocated among other producing countries of the Empire including Australia.

This agreement, which normally would have expired on 31st August, 1942, has proved of great benefit to Australia. In 1943, fourteen of the original 21 Nations signed a protocol continuing the agreement for another two years ending 31st August, 1944. Six further protocols have since been signed, each extending the agreement for a period of one year, the last protocol extending the agreement to 31st August, 1950. The first protocol, signed in 1943 continued the agreement unchanged, while the later protocols

contained two new provisions. The first of these provisions was that during the period of the extension, the quotas fixed in the agreement should be inoperative. The second provision was that the signatories of the protocols recognized that revision of the agreement was necessary and should be undertaken when the time appeared opportune.

7. **Net Return for Sugar Crop.**—Calculations by the Sugar Board regarding the disposal of the crop, net value of exports and the average price realized during each of the years 1938-39 and 1943-44 to 1947-48 will be found in the following table :—

SUGAR : NET RETURNS, AUSTRALIA.

Year	Percentage Exported. (a)	Net Value of Exports per Ton. (a)	Average Price per ton for Whole Crop. (a)	Estimated Value of Crop.
	Per cent.	£ s. d.	£ s. d.	£
1938-39	55.78	8 4 3	15 3 11	12,806,376
1943-44	17.12	13 2 6	20 18 4	12,554,579
1944-45	32.19	15 0 6	19 16 3	12,417,262
1945-46	31.53	16 17 9	20 6 5	13,674,661
1946-47	16.02	21 10 0	21 16 9	12,326,952
1947-48	17.61	29 12 6	24 19 9	14,879,144

(a) As supplied by the Queensland Sugar Board.

The estimated value of the raw sugar produced has been taken from the audited accounts of the Queensland Sugar Board. The values stated represent the gross receipts from sales in Australia and overseas less refining costs, freight, administrative charges, etc., and export charges, but not deducting concessions to the fruit industry and other rebates which in 1947-48 amounted to £216,000. The value thus obtained represents the net market value of all raw sugar sold, which, since 1933, has been divided between the growers and millers in the approximate proportions of 70 per cent. and 30 per cent. respectively. Prior to that year the distribution was about two-thirds to the grower and one-third to the miller.

8. **Imports and Exports of Sugar.**—Particulars showing the imports and exports of cane sugar for the five years ended 1938-39 and each year 1943-44 to 1947-48 are as follows :—

SUGAR : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£
Average 1934-35 to 1938-39	23	505	377,930	3,480,632	377,907	3,480,127
1943-44	95,826	1,523,786	95,826	1,523,786
1944-45	4	114,011	1,853,628	114,011	1,853,624
1945-46	3	150,972	3,059,599	150,972	3,059,596
1946-47	23	117,379	2,717,252	117,379	2,717,229
1947-48	21	100,351	3,062,450	100,351	3,062,429

9. **Sugar By-products.**—Large quantities of molasses are produced as a by-product in the sugar mills. Details for a series of years of the quantities produced and the amounts used for distilling, fuel, manure and other purposes will be found in Chapter XXIV. "Manufacturing Industry".

Boards are now being made from the residuum of crushed fibre after the removal of the sugar content from sugar-cane. These boards are used in the building industry for walls and ceilings and possess high insulating and sound-absorbing properties.

10. **Sugar Prices.**—The prices of sugar in Australia are shown in the following table.

SUGAR : PRICES IN AUSTRALIA.

Year.	Raw Sugar, 94 Net Titre.			Refined Sugar.		
	Average Return per Ton received by millers and growers for—			Date of Determination.	Wholesale Price per ton.	Retail Price per lb.

(a) Including "Excess" Sugar.

11. **War and Post-war Arrangements.**—After the outbreak of war in September, 1939, the British Ministry of Food concluded arrangements with the Queensland Government for the purchase of Australia's surplus production of raw sugar for the season 1939. The price was fixed at £Stg. 7 10s. per ton at United Kingdom ports plus the preference on dominion sugar of £Stg. 3 15s. per ton under the existing tariff.

Similar agreements were negotiated for the disposal of the surplus raw sugar in subsequent seasons, the price in sterling currency per ton c.i.f. United Kingdom ports, basic 96° polarization being as follows :—1940 and 1941, £12 12s. 6d.; 1942, £13 15s.; 1943, £14 5s.; 1944, £15 5s. and 1945, £17 5s., inclusive of the existing preference of £3 15s. From the 1st January, 1946 the price was further increased by £Stg. 2 5s. per ton and the United Kingdom agreed to absorb an additional 12s. 6d. per ton on the freight cost. The price was further increased to £stg. 24 5s. per ton from 1st January, 1947 and to £stg. 27 5s. per ton from 1st January, 1948.

The United Kingdom is to continue the bulk purchase of exportable sugar from Dominions and Colonies up to and including 1952.

§ 16. Vineyards.

1. **Progress of Cultivation.**—(i) *Area of Vineyards.* The date of introduction of the vine into Australia has been variously set down by different investigators, the years 1815 and 1828 being principally favoured. It would seem, however, that plants were brought out with the first fleet in 1788, consequently the Australian vine is as old as Australian settlement. A report by Governor Hunter gives the area of vines in 1797 as 8 acres. From New South Wales the cultivation spread to Victoria and South Australia, and these States have now far outstripped New South Wales in the area of this crop. In

Western Australia an expansion of area under vineyards has occurred in recent years, but in Queensland, where vine-growing has been carried on for many years, little progress has been made. The purposes for which grapes are grown in Australia are (a) for wine-making, (b) for table use, and (c) for drying. The total area of vines in the several States during each of the years 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown in the following table:—

VINEYARDS : AREA.

(Acres.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	A.C.T.	Australia.
Average 1929-30 to 1938-39 ..	15,777	40,563	2,142	54,156	5,666	..	118,304
1943-44 ..	16,001	42,711	2,998	57,261	10,240	2	129,213
1944-45 ..	15,891	42,914	3,032	56,925	10,117	2	128,881
1945-46 ..	15,983	42,843	3,003	57,440	9,583	3	128,855
1946-47 ..	16,338	42,948	2,945	58,221	9,857	3	130,312
1947-48 ..	16,541	43,784	3,087	58,885	10,025	9	132,331
Average 1938-39 to 1947-48 ..	16,394	42,865	3,041	57,963	9,053	3	129,319

The total area of vines in Australia has shown a substantial expansion since 1860. This development has been interrupted periodically, decreases occurring in 1896, in the years between 1904 and 1910, and in 1914. Since the latter year the area increased without interruption from about 61,000 acres to more than 114,000 acres in 1924-25, due largely to the planting of varieties suitable for drying. Subsequently the area fluctuated around 114,000 acres but commenced to increase again in 1933-34. Since then the expansion has continued, with minor interruptions, and the record area of 132,331 acres was reached in 1947-48. A slight decline occurred in each of the years 1943-44 to 1945-46, the acreage in the latter year being 128,855 acres.

(ii) *Report on the Wine Industry.* An investigation into conditions in the wine industry was undertaken by the Commonwealth Director of Development and the Senior Inspector of Excise, Department of Trade and Customs, and a comprehensive report was presented to Parliament on the 17th July, 1931.

During 1944 the Minister for Trade and Customs referred a number of matters to the Tariff Board for inquiry and report. Subsequently four reports were issued during 1944-45 which dealt with the following subjects, viz. :—Use of cane sugar in sauterne, spirit for fortification of wine, prices for grapes and fortifying spirit and control of liquor order.

(iii) *Wine Production, Bounties, etc.* The production of wine has not increased as rapidly as the suitability of soil and climate would appear to warrant. Production for the ten years ended 1947-48 averaged 20.9 million gallons compared with 16.3 million gallons produced during the ten years ended 1938-39. This seems to arise from two causes. In the first place, Australians are not a wine-drinking people; it is estimated that prior to the 1939-45 War they consumed approximately 4.1 million gallons only, or 0.6 gallons per head per annum, and while this had risen to 10,467,000 gallons (1.37 gallons per head of population) in 1947-48, the local market is nevertheless restricted. Secondly, the comparatively new and unknown wines of Australia must compete in the markets of the old world with the well-known and long-established brands from other countries. Continued efforts are being made to bring the Australian wines under notice both here and abroad and with the assistance of a Commonwealth bounty on the export of fortified wine of specified strength, the industry has been greatly stimulated. Further development, however, was interrupted by the war. The loss of the United Kingdom

market due to the lack of shipping space placed the wine industry of Australia in a most difficult position, but this was partly offset by the increase in local consumption due to the availability of supplies, the restriction on the production of beer and the presence of large numbers of defence personnel.

Particulars of the Wine Export Bounty are shown in § 20 hereafter. The Wine Export Bounty Act 1930 which provided for payment at the rate of 1s. 9d. per gallon was replaced in 1934 by a new Act which fixed the rate at 1s. 3d. per gallon for the two years ending 28th February, 1937, and thereafter at a reduction of 1d. per gallon for each succeeding year until 1940. The payment of a bounty at the rate of 1s. per gallon for a period of five years to 28th February, 1945, subsequently extended to 28th February, 1947, was provided for under the Wine Export Bounty Act of 1939-1944. This Act was repealed by the Wine Export Bounty Act 1947 which made provision for payment of bounty, subject to certain conditions, on wine sold overseas prior to 30th October, 1946 and exported after 28th February, 1947.

The quantity of wine produced in the several States during the 1943-44 to 1947-48 seasons, together with the averages for the ten-year periods ended 1938-39 and 1947-48, is shown in the following table :—

WINE : PRODUCTION.

('000 Gallons.)

Season.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Australia.
Average 1929-30 to 1938-39 ..	2,099	1,449	36	12,349	397	16,330
1943-44 ..	3,530	1,320	27	14,435	553	19,865

1945-46 ..	2,968	1,916	35	20,213	726	25,858
1946-47 ..	3,905	3,082	30	25,422	751	33,190
1947-48 ..	4,500	2,958	28	26,000	673	34,159
Average 1938-39 to 1947-48 ..	3,114	1,576	33	15,657	533	20,913

2. Imports and Exports of Wine.—(i) *Imports.* The principal countries of origin of wine imported into Australia were, before the 1939-45 War, France, Spain, Portugal and Italy, the bulk of the sparkling wines coming from France. The bulk of the post-war wine imports have been obtained from France. The imports for the five years ended 1947-48 compared with average imports for the years 1934-35 to 1938-39 are shown hereunder :—

WINE : IMPORTS INTO AUSTRALIA.

Year.	Quantity (Gallons).			Value (£).		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
Average 1934-35 to 1938-39 ..	8,119	28,566	36,685	20,245	19,332	39,577
1943-44	755	755	..	1,200	1,200
1944-45 ..	100	..	100	132	..	132
1945-46 ..	40	479	519	213	1,433	1,646
1946-47 ..	1,719	1,585	3,304	7,909	3,041	10,950
1947-48 ..	14,768	4,158	18,926	54,098	8,282	62,380

(ii) *Exports.* Before the 1939-45 War practically all wine exported was sent to the United Kingdom, only 200,000 gallons (approximately) being sent elsewhere. Exports in 1947-48 totalled 2,688,366 gallons, of which the United Kingdom received 2,157,056 gallons; New Zealand, 265,557 gallons; Canada, 135,816 gallons; Japan, 24,479 gallons; and other countries 102,458 gallons.

Exports for the five years ended 1947-48 are shown in the following table in comparison with average exports during the five years ended 1938-39 :—

WINE : EXPORTS FROM AUSTRALIA.

Year.	Quantity (Gallons).			Value. (£)		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
Average 1934-35 to 1938-39 ..	3,772	3,559,094	3,562,866	5,400	938,195	943,595
1943-44 ..	10,306	1,235,095	1,245,401	6,966	415,966	422,932
1944-45 ..	6,254	1,544,714	1,550,968	7,735	587,563	595,298
1945-46 ..	7,984	1,776,452	1,784,436	10,619	729,969	740,588
1946-47 ..	3,244	2,717,355	2,720,599	4,975	1,176,626	1,181,601
1947-48 ..	5,935	2,682,431	2,688,366	8,071	1,421,861	1,429,932

3. *Overseas Marketing of Wine.*—(i) *The Wine Overseas Marketing Act 1929-1945.* This Act was introduced at the request of the viticultural interests in Australia with the object of placing the overseas marketing of Australia's surplus wine on an orderly basis. The Wine Overseas Marketing Board was appointed to supervise the exports, and the sale and distribution after export, of Australian wine.

The name of the Board was changed to the Australian Wine Board in 1936. An amendment to the Act in 1945 made provision for eleven members on the Board, comprising five representatives of proprietary and privately-owned wineries and distilleries, two representatives of co-operative wineries and distilleries, three representatives of grape-growers supplying to wineries and distilleries, and one representative of the Commonwealth Government. No wine may be exported except by means of a licence which is issued under conditions recommended to the Minister by the Board; these include the withholding of shipments as directed by the Board. The Board has a London agency which advises on marketing conditions. The methods of marketing adopted by the Board have resulted in the widening of the distribution of Australian wines overseas.

(ii) *The Wine Grapes Charges Act 1929-1941.* This Act provides for the imposition of a levy on all grapes used in Australia for the manufacture of wines or spirit used for fortifying wine. The proceeds of the levy are used to defray the administrative and other expenses of the Board, and provision is made for such exemptions from the levy as the Board may recommend.

4. *Other Viticultural Products.*—(i) *Table Grapes.* Grapes for table use are grown in all the States except Tasmania, but the area cultivated to this variety is only about 7 per cent. of the productive area of grapes. The greatest development in the industry

has taken place in the drying of raisins and currants, particularly in Victoria and South Australia. The quantities of table grapes grown during the seasons 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are as follows :—

TABLE GRAPES : PRODUCTION.

(Tons.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Australia.
Average 1929-30 to 1938-39	4,354	3,884	2,060	738	2,874	13,910
1943-44	5,325	4,067	2,696	1,150	3,240	16,478
1944-45	4,363	5,255	2,237	917	2,903	15,675
1945-46	4,817	4,133	3,120	1,036	2,342	15,448
1946-47	4,682	3,537	2,669	1,314	2,436	14,638
1947-48	4,835	4,328	2,851	660	2,320	14,994
Average 1938-39 to 1947-48	4,666	4,155	2,636	1,106	2,693	15,256

(ii) *Raisins and Currants.* The quantities of raisins (sultanas and lexias) and currants dried during each of the seasons 1943-44 to 1947-48 and the averages for the ten-year periods ended 1938-39 and 1947-48 are shown in the following table. The production of 103,410 tons for the 1943-44 season represents the greatest output recorded in any year. Due to adverse seasonal conditions, heavy crop losses occurred during the three succeeding years. Production in 1944-45 amounted to 68,857 tons, in 1945-46 to 73,840 tons and in 1946-47 to 65,197 tons. In 1947-48 it rose to 84,828 tons.

RAISINS(a) AND CURRANTS : PRODUCTION.

(a) Sultanas and lexias.

5. *Production and Disposal of Dried Vine Fruit.*—As the production of dried vine fruit is far in excess of Australia's requirements, considerable quantities are available for export overseas. Details of the quantities disposed of in Australia and overseas are given in the table below. Australian consumption includes amounts delivered to biscuit manufacturers, bakeries, etc., as well as retail sales for household consumption.

DRIED VINE FRUIT : QUANTITIES DISPOSED OF, AUSTRALIA.

(Tons.)

6. **Exports of Raisins and Currants.**—The following table shows the oversea exports of raisins and currants during each of the years 1943-44 to 1947-48 compared with the average for the five years ended 1938-39. As the quantities of imports were practically negligible they have been omitted.

RAISINS AND CURRANTS : EXPORTS, AUSTRALIA.

Year.	Raisins.		Currants.		Total Raisins and Currants.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£
Average 1934-35 to 1938-39 ..	43,191	1,686,447	15,054	548,838	58,245	2,235,285
1943-44 ..	56,039	2,449,050	18,994	714,315	75,033	3,163,365
1944-45 ..	56,418	2,647,719	20,994	828,330	77,412	3,476,049
1945-46 ..	30,022	1,547,688	9,307	403,645	39,329	1,951,333
1946-47 ..	35,248	1,913,574	5,606	243,508	40,854	2,157,082
1947-48 ..	31,364	1,795,358	10,066	468,684	41,430	2,264,042

Since 1912 Australia has not only produced sufficient raisins and currants for home consumption but has been able to maintain a large export trade. The chief countries importing Australian raisins and currants are the United Kingdom, New Zealand and Canada, the quantities exported thereto in 1947-48 being 31,612 tons, 5,490 tons and 2,999 tons respectively. Exports to Canada increased from 4,600 tons in 1928-29 to 16,944 tons in 1939-40 and to 25,955 tons in 1944-45, but decreased to 2,999 tons in 1947-48.

7. **War-time Contract.**—At the outbreak of war in 1939 the Government of the United Kingdom purchased all available surpluses after provision had been made for Canadian and New Zealand requirements. During the 1944 and 1945 seasons prices fixed under these contracts represented a substantial increase over pre-war prices.

8. **Post-war Contract.**—A long term agreement was negotiated between the Governments of the United Kingdom and Australia for the purchase of the exportable surplus of the dried vine fruit crop for the 1946, 1947 and 1948 seasons. A further agreement has been reached between the Governments of the United Kingdom and Australia under which Australian dried vine fruits will be purchased by the United Kingdom during the years 1949 to 1953. The contract provides that the quantity of fruit to be purchased each year shall not exceed a value of £2,500,000 sterling currency on an f.o.b. basis. Export prices have been fixed for the first two years, but during the remaining three years they are to be the subject of annual agreement by the two Governments. The contract prices for currants, sultanas and lexias sold to the United Kingdom during the war years 1943 and 1945, as well as the prices fixed under the post-war contracts covering the years 1946 to 1950, are shown in the following table.

DRIED VINE FRUITS : CONTRACT PRICES PER TON TO UNITED KINGDOM.

(£A. s. d., f.o.b. Australian Ports.)

Fruit.	Grade.	1943.	1944.	1945.	1946 to 1948.	1949 and 1950.
Currants ..	1 Crown and upwards ..	37 16 3	41 11 3	43 2 6	50 0 0	60 0 0
Sultanas ..	1 Crown and upwards ..	51 5 0	55 0 0	56 11 3	65 0 0	70 0 0
Lexias ..	4 and 5 Crown ..	50 12 6	54 7 6	55 18 9	64 7 6	64 7 6

9. *Overseas Marketing of Dried Fruits.*—(i) *The Dried Fruits Export Control Act 1924-1938.* This Act was passed by the Commonwealth Parliament at the request of the dried fruits industry to organize the overseas marketing of Australian dried vine fruits. The Dried Fruits Control Board, consisting of eight members—including five growers' representatives, two members with commercial experience and one Government nominee—was appointed to control the export, and the sale and distribution after export, of Australian sultanas, currants and lexias. In conjunction with its London agency, the Board has improved the marketing of Australian dried fruits overseas, and has increased the demand for the product. Its system of appraisement has resulted in more satisfactory realizations. Its methods of ensuring continuity of supply and regulating shipments and its participation in the advertising campaign of the Australian Overseas Trade Publicity Committee have benefited the industry considerably. No dried fruits may be exported except by means of a licence, which is issued subject to conditions recommended by the Board.

(ii) *Dried Fruits Export Charges Act 1924-1929.* This Act provides for the imposition of a levy on all sultanas, currants and lexias exported from Australia for the purpose of defraying the administrative expenses of the Board and the cost of advertising, etc. The rate of the levy is fixed by regulation. Under an amendment made in 1927 provision was made for the exemption of sultanas, currants and lexias from the levy upon recommendations by the Board.

(iii) *The Dried Fruits Act 1928-1935.* In previous issues of the Official Year Book reference has been made to the Dried Fruits Act and its provisions have been outlined (see p. 894 of Official Year Book, No. 28).

§ 17. Orchards and Fruit-Gardens.

1. *Area.*—The largest area of orchards and fruit-gardens prior to the 1939-45 War was attained in 1933-34 when 281,899 acres were planted. From that year until 1942-43, when 260,384 acres were under fruit, there was a gradual decline. Since 1942-43 there has been a continuous upward movement, and the area in 1947-48 reached a new peak of 290,320 acres. The total area of orchards and fruit-gardens in the several States during the years 1943-44 to 1947-48, compared with the averages for the ten seasons 1929-30 to 1938-39 and the ten seasons 1938-39 to 1947-48, is shown in the following table:—

ORCHARDS AND FRUIT-GARDENS : AREA.

2. **Varieties of Crops.**—(i) *General.* The varieties grown differ in various parts of the States, ranging from such fruits as the pineapple, papaw, mango and guava of the tropics to the strawberry, the raspberry and the currant of the colder parts of the temperate zone. In New South Wales, citrus fruits (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears and cherries are extensively grown. The principal varieties grown in Victoria are the apple, peach, pear, orange, plum and apricot. In Queensland, the banana, pineapple, apple, orange, mandarin, peach, and plum are the varieties most largely cultivated. In South Australia, in addition to the apple, orange, apricot, plum, peach and pear, the almond and the olive are extensively grown. In Western Australia, the apple, orange, lemon, pear, plum, peach, apricot and fig are the chief varieties. In Tasmania, the apple occupies over two-thirds of the fruit-growing area, but small fruits, such as the currant, raspberry and gooseberry, are extensively grown, while the balance of the area is mainly taken up with the pear, apricot and plum. The following tables show the acreage—bearing and non-bearing—of the principal kinds of fruit, and the quantity and value of fruit produced.

(ii) *Area.* The table hereunder shows the total acreage—bearing and non-bearing—for 1947-48 :—

ORCHARDS AND FRUIT-GARDENS : AREA, 1947-48.

Canned Fruit ..	10.7	8.4	11.0	12.3
Total Fresh Fruit Equivalent ..	163.6	169.1	187.9	186.0

(a) Includes table grapes.

6. Imports and Exports of Fruit.—(i) *General.* The imports of fresh fruits into Australia are negligible, whilst those of dried fruits consist mainly of dates.

A considerable export trade in both fresh and dried fruits is carried on by Australia with overseas countries. The values of the shipments in 1947-48 amounted to £3,886,059 and £2,558,974 respectively. Apples formerly constituted the bulk of the fresh fruit exported, although the exports of citrus fruits and pears were fairly considerable. Shipments of raisins and currants have increased greatly since 1914-15 and are mainly responsible for the growth in the dried fruits exports, although dried tree fruits also figure amongst the exports. Owing to shipping difficulties and other factors the exports of fresh fruit were seriously curtailed during the 1939-45 War.

(ii) *Fresh Fruits.* Particulars of the Australian overseas trade in fresh fruits are shown in the following table :—

FRESH FRUITS : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

1947-48 ..	1,407,789	2,694,789	179,782	365,842	273,257	603,628

(iv) *Dried Fruits.* The quantity and value of oversea imports and exports of dried fruits, other than raisins and currants, for the five years ended 1947-48, compared with the average for the five years 1934-35 to 1938-39, are shown below. Normally, the bulk of the imports consists of dates obtained almost entirely from Iraq. This trade was prohibited during the war years but has since been resumed.

DRIED FRUITS(a) : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£	'000 lb.	£	'000 lb.	£
Average 1934-35 to 1938-39 ..	12,225	80,121	4,315	117,222	-7,910	37,101
1943-44 ..	24	660	3,631	131,188	3,607	130,528
1944-45 ..	6,626	141,996	1,860	95,239	-4,766	-46,757

1947-48 ..	11,835	253,971	4,508	294,932	-7,327	40,961

(a) Excludes raisins and currants referred to separately under Vineyards, § 16, par. 6.

NOTE.—Minus sign (-) denotes net imports.

(v) *Jams and Jellies.* The exports of jams and jellies have reached large proportions since the 1939-45 War. In 1947-48 shipments totalled 59,642,000 lb. valued at £2,232,168 compared with average exports of 7,118,000 lb. valued at £137,707 during the five years ended 1938-39. Small quantities of jam were imported before the war but the quantities involved now are negligible. Particulars of imports and exports during each of the five years ended 1947-48, compared with the average for the five years 1934-35 to 1938-39, are as follows:—

JAMS AND JELLIES : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£	'000 lb.	£	'000 lb.	£
Average 1934-35 to 1938-39 ..	69	2,407	7,118	137,707	7,049	135,300
1943-44	5	21,638	557,161	21,638	557,156
1944-45	1	27,001	692,056	27,001	692,055
1945-46	42,183	1,310,412	42,183	1,310,412
1946-47	3	65,434	2,206,696	65,434	2,206,693
1947-48 ..	1	136	59,642	2,232,168	59,641	2,232,032

(vi) *Preserved Fruit.* The total quantity of fruit preserved in liquid, or partly preserved in liquid or pulped, imported into Australia during 1947-48 was 4,796 lb. valued at £120. Large quantities of fruit preserved in liquid are normally exported from Australia, the value of shipments in 1938-39 amounting to £1,271,525. Exports were considerably reduced during the recent war owing to the prior claims on Australia's output by the Australian and Allied Services based on Australia, but in 1947-48 the value of exports had increased to £2,765,791. In addition, the exports of pulped

fruits during 1947-48 amounted to 5,416,747 lb. valued at £256,450. Particulars of the quantities and values of fruit preserved in liquid exported from Australia for each of the five years ended 1947-48 compared with the average for the five years 1934-35 to 1938-39, are shown in the following table :—

FRUIT PRESERVED IN LIQUID : EXPORTS FROM AUSTRALIA.

Year.	Apricots.	Peaches.	Pears.	Other.	Total.
QUANTITIES ('000 lb.).

7. Marketing of Apples and Pears.—(i) *Apple and Pear Organization Act 1938-1948*. This Act, which was passed by the Commonwealth Parliament at the request of the apple and pear industry, provides for the establishment of an Australian Apple and Pear Board for the purpose of organizing and controlling the export trade in fresh apples and pears.

The Board originally comprised sixteen members but by an amendment of the Act in 1947 the members were reduced to twelve, representative of the following interests :— one member to represent the Commonwealth Government ; seven members to represent growers of apples and pears on the basis of two for Tasmania and one each for the other States ; three members to represent exporters of apples and pears on the basis of one each for Tasmania and Western Australia and one for the other States ; and one member to represent the employees engaged in the apple and pear industry.

The Board has power to regulate the shipment of apples and pears from Australia by licensing exporters and issuing permits to export. Power is also given to determine export quotas and to allocate the consignments from each State. The Board may appoint persons to represent it overseas.

The Apple and Pear Publicity and Research Act 1938 and the related Apple and Pear Tax Acts, referred to in earlier issues of the Official Year Book, have now been repealed by the 1947 amendment to the Apple and Pear Organization Act. The latter Act was subject to a further minor amendment in 1948.

(ii) *Apple and Pear Export Charges Act 1938-1947*. This Act provides for the imposition of a levy on all apples and pears exported from Australia for the purpose of providing the funds necessary to meet the administrative and other expenses of the Board.

(iii) *Apple and Pear Acquisition*. Exports of apples and pears were seriously curtailed as a result of the war, and during the 1940 to 1948 seasons crops were acquired and marketed under the National Security (Apple and Pear Acquisition) Regulations and Regulations issued under the Defence (Transitional Provisions) Act 1946. During the 1940 season the scheme was supervised by a Marketing Committee attached to the Australian Apple and Pear Board with committees operating in each State, but from 1941

the operations of the Australian Apple and Pear Board were suspended and the Australian Apple and Pear Marketing Board was constituted under the National Security (Apple and Pear Acquisition) Regulations to handle and market all apples and pears acquired. The Regulations provided for the acquisition and orderly marketing of apple and pear crops, growers being paid guaranteed advances on fruit acquired. During the 1940, 1941 and 1942 seasons, the acquisition applied to all States but from 1943 to 1948 the scheme operated only in respect of crops grown in Tasmania and Western Australia. The following table gives details of the total quantity of fruit acquired and the amounts paid to growers as advances on the basis of "bare" fruit in the orchard for the seasons 1944 to 1948. All packing and marketing costs such as cases, packing, transport, cool storage, selling, etc. were paid by the Board:—

(a) Acquisition scheme did not apply to New South Wales, Victoria, Queensland and South Australia after 1942.

Following a decision of the Commonwealth Government towards the end of 1948 not to apply its acquisition powers any longer, the 1949 apple and pear crops in Tasmania and Western Australia were handled under State marketing schemes and the Australian Apple and Pear Marketing Board acted as the marketing agent for the State schemes. The actual arrangements for the 1949 season were much the same as previously except that control, instead of being vested in the Commonwealth, was taken under State legislation. The Commonwealth, however, guaranteed each State concerned against any financial loss on their respective marketing pools. In Western Australia a complete acquisition was implemented by the State on lines similar to the Commonwealth acquisition. In Tasmania a voluntary marketing pool was established in which growers participated by entering into an agreement with the State Minister for Agriculture to deliver their crop to the pool for marketing purposes.

8. *Overseas Marketing of Canned Fruit.*—(i) *The Canned Fruits Export Control Act 1926–1938.* This legislation was introduced at the request of canners and representative organizations of fruit-growers with the object of organizing the oversea marketing of canned fruit. The original Act referred to canned apricots, peaches and pears only, but canned pineapples and canned fruit salads consisting of not less than 75 per cent. of specified fruits were subsequently brought within the scope of the Board's operations.

The personnel of the Australian Canned Fruits Board consists of one representative each from proprietary and privately owned canneries, co-operative canneries, State-controlled canneries, pineapple interests and the Commonwealth Government. No canned fruits to which the Act applies are permitted to be exported except under a licence issued in accordance with conditions recommended by the Board. The system of marketing adopted by the Board, including the fixation of minimum selling prices overseas, the appointment of a London agency and the engaging in oversea trade publicity, has resulted in the satisfactory disposal of the annual exportable surplus of canned fruits. The distribution of canned fruits has been widened and the exporting side of the industry placed on a sounder basis through the Board's operations.

(ii) *The Canned Fruits Export Charges Act 1926-1938.* This Act provides for the imposition of a levy on the export of canned fruits to meet the administrative and other commitments of the Board. The rate of the levy is fixed by regulation from time to time. An amendment in 1929 provided for certain exemptions from payment of the levy when recommended by the Board.

(iii) *War-time Contracts.* During 1940 and 1941 purchases of canned fruit were made by the British Ministry of Food at prices fixed on an f.o.b. basis, Australian ports. From 1942 to 1945 the requirements of the Defence Services and other Governmental orders necessitated official control of disposals, and commercial shipments of canned fruits virtually ceased, while quantities available for civilian consumption were considerably below normal requirements. In 1946 commercial shipments were resumed and approximately one million cases of canned fruits were exported to the United Kingdom under an official arrangement which was virtually on a merchant to Government basis. A similar arrangement has operated in respect of exports to the United Kingdom during 1947, 1948 and 1949.

§ 18. Vegetables for Human Consumption.

1. *Area and Production of Fresh Vegetables.*—The pre-war production of vegetables in Australia, which had been sufficient to meet the needs of the population was, generally speaking, supplied by growers whose holdings were adjacent to centres of consumption. These areas were classified for statistical purposes as market gardens and were tabulated as such. Details of the areas planted and production respecting individual kinds of vegetables were not collected.

Following the outbreak of war in the Pacific in December, 1941 and the establishment of Australia as a base for Australian and Allied Services in the South-West Pacific Area it was evident that the production of fresh vegetables under the conditions then existing would be insufficient to meet the additional demand from the Services. Consequently extensive development of vegetable-growing in Australia was undertaken, resulting in an expansion from the peace-time need of about 100,000 acres to more than 200,000 acres exclusive of potatoes, onions, navy beans and blue peas, details of whose production are referred to in §§ 10, 11 and 12 of this Chapter.

This development was achieved by continuing supplies of vegetables to the civil population from the market gardens already established, by extending production to areas which previously had not grown these crops and by the mechanization of the industry. Farming operations were thus able to be undertaken in many cases on a scale larger than that normally adopted in Australia. In addition, the letting of contracts at guaranteed prices proved an attraction, and the vegetable-growing industry was able to produce the additional quantities necessary to meet the war-time needs of the services as well as those of the civil population. Since the close of the war there has been a considerable reduction in vegetable growing and the area of the crops dealt with in this section declined from the war-time peak of 240,282 acres in 1944-45 to 156,431 acres in 1947-48.

Details of the area and production of vegetables for the seasons 1945-46 to 1947-48 are given in the following table. Similar details for the years 1942-43 to 1943-44 were given in earlier issues of the Year Book (No. 36, p. 839 and No. 37, p. 956). Owing to the difference in collection already referred to, comparable figures prior to 1942-43 are not available.

FRESH VEGETABLES(a) FOR HUMAN CONSUMPTION : AUSTRALIA.

(a) Excludes potatoes, onions, blue peas and navy beans.

2. Production of Canned Vegetables.—As a corollary to the development mentioned above a considerable expansion occurred in the processing of vegetables. New canning factories were established in many parts of the Commonwealth, and a new industry for the processing of vegetables by the dehydration method was commenced. Since the close of hostilities there has been a sharp decline in the output of canned vegetables, but the quantities canned in 1947-48 and 1948-49 were considerably greater than in 1938-39.

The development in the vegetable canning industry is indicated in the table below :—

PRODUCTION OF CANNED VEGETABLES : AUSTRALIA.

('000 lb.)

Vegetable.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49. (a)

(a) Subject to revision. (b) Included in "Other Vegetables". (c) Includes Parsnips, Potatoes, Turnips, Sweet Corn, etc. (d) Includes particulars of vegetables marked (b).

3. Production of Dehydrated Vegetables.—The dehydration of vegetables was not undertaken in Australia until after the outbreak of war in the Pacific towards the close of 1941. The demand for vegetables in this form by Australian and Allied Services made

this development a necessity and as a result 33 dehydration plants were erected in all States except Queensland, in areas where adequate supplies of suitable vegetables were assured. With the termination of Commonwealth contracts for dehydrated vegetables in October, 1946, a number of plants ceased to operate and output for commercial purposes in the remaining plants was drastically curtailed. Details of the quantities of fresh vegetables used for dehydration and the output of dehydrated vegetables during the years 1942-43 to 1946-47 were shown on page 957 of Official Year Book No. 37.

4. Imports and Exports of Vegetables.—Oversea exports of pulse and fresh vegetables during 1947-48 consisted of:—pulse, 11,284 tons, £530,272; onions, 18,230 tons, £352,771; potatoes, 30,008 tons, £622,379; other vegetables, 4,472 tons, £209,468. Imports totalled 6,363 tons, valued at £282,353, of which pulse comprised 6,111 tons, valued at £279,542.

In 1947-48 exports of vegetables preserved in liquid consisted of:—Peas, 4,285,705 lb., £168,392; tomatoes, 2,532,960 lb., £69,405; other vegetables, 25,835,288 lb., £666,232.

5. Consumption of Vegetables.—Details of the estimated consumption of vegetables for each of the three years ended 1948-49 are shown on pp. 1243 and 1245 of this Year Book.

§ 19. Minor Crops.

1. General.—There are many other crops which do not occupy so prominent a position as those already enumerated. Some of the more important of these are included under the headings—Tobacco, Hops, Flax, Peanuts, Cotton and Sorghum.

2. Grass Seed.—Particulars of the area of grass crops grown for seed cannot be accurately determined as seed is obtained from certain crops such as clover, lucerne, etc., at a second cutting. The production of seed recorded in 1947-48 was:—clover, 35,319 cwt.; lucerne, 7,594 cwt.; other grass seed, 44,390 cwt.; a total of 87,303 cwt.

3. Other Grains from Sorghums.—In addition to the grass seed referred to in paragraph 2 above and grain sorghum in § 9, considerable expansion has occurred in the area sown to Japanese Millet, Panicum and Setaria. Particulars of the area and production for the years 1942-43 to 1947-48 are given in the table below.

SORGHUMS: AREA AND PRODUCTION OF GRAIN, AUSTRALIA.

Year.	Japanese Millet.(a)		Panicum, Millet and Setaria.(b)	
	Area.	Production.	Area.	Production.
	Acres.	Tons.	Acres.	Bus.
1942-43	496	149	9,319	116,282
1943-44	1,083	460	15,948	300,307
1944-45	2,948	964	16,570	178,612
1945-46	2,628	1,526	22,172	325,194
1946-47	1,393	678	39,372	407,482
1947-48	748	225	16,086	236,430

(a) Victoria only.

(b) Queensland only.

4. Tobacco.—(i) General. Tobacco-growing years ago promised to occupy an important place amongst the agricultural industries of Australia. As early as the season 1888-89, the area of this crop amounted to 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria, and 123 in Queensland. This promise was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2,000 acres, and that in Queensland to over 1,000 acres, the total area declined considerably.

(ii) *States, Area and Production.* The expansion of the tobacco-growing industry was hoped for as a war-time measure but, although the acreage planted increased slightly during the first three war years, it has since decreased considerably, being in 1947-48 only 34 per cent. of the annual average for the ten years ended 1938-39, and the production of dried leaf only 46 per cent. of the pre-war average. The area of 3,843 acres and production of 2,484,000 lb. represented a decrease on 1941-42 of 4,977 acres and of more than 4,556,000 lb.

In the following table particulars of the area and production of tobacco are given by States for each of the years 1943-44 to 1947-48, together with averages for the ten-year periods ended 1938-39 and 1947-48:—

TOBACCO : AREA AND PRODUCTION.

(a) Average nine years.

(iii) *Australian Tobacco Board.* The Australian Tobacco Board was constituted in May, 1941 under the National Security (Australian Tobacco Leaf) Regulations for the purpose of controlling the marketing of Australian-grown tobacco leaf, which was required to be submitted to the Board for appraisement. The Board ceased to function towards the end of 1948 and subsequent crops have been marketed at open auction in the respective States.

(iv) *Tariff Board Inquiries.* The tobacco industry has been the subject of a number of investigations. The Tariff Board inquired into the industry in 1926, 1931 and 1940 and reports were issued.

(v) *Tobacco Inquiry Committee.* The Tobacco Inquiry Committee, which was appointed by the Commonwealth Government to investigate certain aspects of the industry in North Queensland, presented its report in 1933. Recommendations included that for payment of a sum of £20,000 annually for a period of five years to assist the States to continue economic and scientific investigations. This recommendation was adopted and the distribution was spread between the years 1934-1938 as follows:—£5,000 to the Council for Scientific and Industrial Research (now the Scientific and Industrial Research Organization), £3,750 to each of the States of New South Wales, Victoria and Queensland, and £1,250 each to South Australia, Western Australia and Tasmania.

A further grant of £62,500, which was increased by £11,250 in 1941, was allotted by the Commonwealth Government to be paid periodically between the years 1939 to 1943. The amount of £73,750 was allocated as follows:—Council for Scientific and Industrial Research, £25,000, and £10,000 annually among the States for the years 1939 and 1941 to 1943, and £8,750 for 1940. In August, 1946 the Commonwealth Cabinet approved a grant of £10,000 per annum for five years on a £ for £ basis to be allocated among producing States for experimental and demonstration work in connexion with tobacco leaf production; particularly in regard to control and elimination of diseases and pests. The annual grant of £10,000 has been allocated to States on the following basis:—Queensland, £3,750; New South Wales, £1,500; Victoria, £2,250; Western Australia, £2,500.

The Scientific and Industrial Research Organization is investigating diseases affecting the tobacco plant, including work on disease-resisting varieties, and is making tests of smoking quality. In spite of delays due to the war, the Organization has been successful in discovering effective means of preventing blue mould, which has seriously retarded the development of the industry. The States are carrying out field investigations on disease resistance, selection, yield and quality improvement, and are conducting instructional, demonstrational and field experimental work.

(vi) *Tobacco Factories.* In 1947-48 the quantity of stemmed leaf used in tobacco factories in Australia amounted to 26.6 million lb. of which 2.9 million was of local origin the balance being imported, chiefly from the United States of America.

(vii) *Oversea Trade.* Imports of tobacco and manufactures thereof into Australia during 1947-48 were valued at £7,721,388, including 30,951,400 lb. of unmanufactured tobacco valued at £5,691,599. Exports of tobacco during 1947-48 were valued at £222,095.

5. *Hops.*—Hop-growing in Australia is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for 1947-48 being 1,503 acres, of which 1,263 acres were in Tasmania, and 240 acres in Victoria. A small area was also grown in Western Australia, but the details are not available for publication. The Tasmanian area, though still small, has increased during the present century, the total for 1901-2 being 599 acres. The cultivation of hops was much more extensive in Victoria some 60 years ago than at present, the area in 1883-84 being 1,758 acres.

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table details of the production, imports and exports of hops and the quantity of hops used in breweries are shown for each of the years 1943-44 to 1947-48 in comparison with the average for the five years ended 1938-39.

HOPS : PRODUCTION AND DISPOSAL, AUSTRALIA.

Year.	Production.		Imports.	Exports.	Net Available Supplies. (a)	Quantity used in Breweries.
	Quantity.	Gross Value.				
	Cwt.	£	Cwt.	Cwt.	Cwt.	Cwt.

1947-48	24,449	317,531	9,823	15	34,257	25,050

(a) Dieregarding movements in stocks.

The Tariff Board conducted an inquiry into the hop-growing industry and issued a report on 12th June, 1945.

6. Flax.—For many years flax was grown intermittently in parts of Victoria and unsuccessful attempts were made to introduce its cultivation in some of the other States.

During the 1914-18 War there was an acute shortage of flax fibre and expansion of production was encouraged by the Commonwealth Government. Bounties were paid on production during the years 1907 to 1918 and again for each of the five years ended 1935. The amounts distributed as bounty during these periods totalled £2,370 and £2,839 respectively. However, the maximum area, which was sown in 1919-20, was only slightly more than 1,600 acres. The area subsequently declined to less than 200 acres in 1928-29. A further attempt to establish the industry was made in 1935 and as a result the area in Victoria had increased to 1,358 acres by 1938-39. Following the outbreak of the 1939-45 War the area sown increased rapidly, reaching over 54,000 acres in 1941-42 and over 61,000 acres in 1944-45. In 1945-46, however, the area sown fell by 32 per cent. to 41,413 acres. Victoria is the chief producing State, but South Australia, Western Australia and Tasmania have also contributed to this war-time expansion which was necessary to ensure Australia's supplies of flax and, in accordance with an agreement negotiated between the two Governments, to provide an export to assist in meeting the urgent needs of the United Kingdom. The arrangement concluded on 31st October, 1946, and the area under flax for fibre declined to 18,354 acres in 1946-47 and to 17,790 acres in 1947-48.

Details of the area under flax and the production of straw are given in the following table :—

FLAX FOR FIBRE : AREA AND PRODUCTION.

Year.	Victoria.	S. Australia.	W. Aust.	Tasmania.	Total.

(a) Includes nine acres of unproductive flax in Queensland.

Although the growing of flax on a large scale was established as a war-time measure, it is proposed to continue the industry at a level sufficient to meet local requirements, providing that it can be efficiently maintained in competition with other countries.

The industry is under the control of the Flax Production Committee appointed under the Supply and Development (Flax Production) Regulations. The Committee has, amongst other things, organized the growing and harvesting of the crop, and the processing of the flax as well as disposing of the resultant products to spinners and others in Australia and overseas. In 1943-44 in the four producing States there were 31 mills under the control of the Committee. The number of flax mills operating in 1947-48 was sixteen.

Prior to 1948-49, the growing of flax for oil had not been developed extensively in Australia and in 1947-48 the area devoted to this purpose was only 1,844 acres from which 273 tons of linseed was obtained. Action is being taken to develop this industry, however, and in 1948-49 the area had risen to 14,516 acres. Up to the present, crops are mainly being held for seed purposes with a view to further expansion of the industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements.

The flax industry was the subject of two investigations, one in 1933 and the other in 1936 (*see* Official Year Book No. 32, p. 658).

7. *Peanuts.*—The production of peanuts, or groundnuts, in Australia is mainly confined to Queensland, although small quantities are grown in New South Wales and Western Australia. Details of the area and production are given in the table below.

PEANUTS : AREA AND PRODUCTION, AUSTRALIA.

Year.	Area (Acres).				Production (Tons).			
	N.S.W.	Q'land.	W. Aust.	Total. (a)	N.S.W.	Q'land.	W. Aust.	Total. (a)

(a) Excludes Northern Territory.

(b) Average for five years.

(c) Average for seven years.

The gross value of the 1947-48 crop was £625,599.

In addition to the production shown above, considerable quantities of peanut kernels were formerly imported annually, chiefly from India, for oil expression purposes, but this has been suspended since January, 1946. Details of Australia's available supplies in terms of kernels are given for the years 1938-39 and 1944-45 to 1948-49.

PEANUTS (IN TERMS OF KERNELS) : AVAILABLE SUPPLIES, AUSTRALIA.

(Tons.)

Imports ..	2,270	11,022	764	..	5	3
Total ..	5,770	17,432	7,592	8,878	15,188	10,568

(a) Crop harvested in April-May of the preceding year and available for consumption during year shown.

8. *Broom Millet*.—The total area devoted to broom millet in 1947-48 was 3,868 acres, of which 3,294 acres were in New South Wales, 422 in Victoria and 172 in Queensland. The total production from these areas was 15,239 bushels of grain and 25,499 cwt. of fibre.

9. *Nurseries*.—In all the States fairly large areas are occupied as nurseries. The acreages under flowers, fruit-trees, etc., in 1947-48 in the various States were as follows:—New South Wales, 1,086 acres; Victoria, 2,931 acres; Queensland, 193 acres; South Australia, 98 acres; Western Australia, 265 acres; Tasmania, 227 acres; and Australian Capital Territory, 5 acres; a total for Australia of 4,810 acres.

10. *Cotton*.—(i) *General*. The production of cotton in Australia is restricted to Queensland where cultivation began in 1860, and ten years later the area cropped had increased from 14 acres to over 14,000 acres. The reappearance of American cotton in the European market on the conclusion of the Civil War gave a severe setback to the new industry, and the area declined continuously until 1888, when only 37 acres were planted. Later on the industry was revived, and manufacturing on a small scale was undertaken on two separate occasions at Ipswich, but low prices over a term of years checked development.

(ii) *Bounties, etc.* In 1913 the Queensland Government made an advance of 1½d. per lb. on seed cotton and ginned it on owner's account, the final return being equal to about 1¾d. per lb. The rise in price enabled the Government to offer a guarantee of 5½d. per lb. for seeded cotton of good quality for the three years ended 31st July, 1923, and the areas picked increased from 166 acres in 1920 to 50,186 acres in 1924. Guarantees were continued until 1926, when the Commonwealth Government granted a bounty varying from ¾d. to 1½d. per lb. according to grade. In addition, the cotton-manufacturing industry received a graduated bounty on all cotton yarn manufactured in Australia which contained 50 per cent. of home-grown cotton. This bounty, however, ceased to operate after 30th June, 1932. The cotton-growing industry was further assisted by the Bounty Act of 1934, which extended the period to 1940 at varying rates of bounty.

The Raw Cotton Bounty Act 1940 provided an extension of assistance until 31st December, 1946. The Act was amended in August, 1946 to provide a guaranteed net average return to cotton-growers of 15d. per lb. of raw cotton for five years from 1st January, 1947.

The Tariff Board carried out an investigation into the cotton-growing industry in 1945.

(iii) *Expansion of the Cotton-growing Industry*. Australia produces only portion of its requirements of raw cotton, the balance being obtained chiefly from the United States of America and India. Efforts have been directed towards increasing production by an extension of area and the introduction of irrigation methods, but the results so far have not met with much success. Production was increased during the war years but has since fallen away. The expansion of the industries connected with the spinning and weaving of cotton is referred to in Chapter XXIV. "Manufacturing Industry".

The area under cultivation and the production in Queensland for the years 1944 to 1948 are shown hereunder together with the averages for the periods of ten years ended 1938-39 and 1947-48 :—

COTTON : AREA AND PRODUCTION IN QUEENSLAND.

(a) Bales of approximately 500 lb. (b) Includes 7,221 lb. of unginned cotton and the equivalent of ginned cotton grown in New South Wales.

(iv) *Consumption of Raw Cotton.* The following table shows the expansion which has taken place in the consumption of raw cotton in Australia since 1938-39.

RAW COTTON : PRODUCTION, IMPORTS AND CONSUMPTION, AUSTRALIA.

('000 lb.)

Year.	Production.	Imports.	Total.	Consumption in Cotton Mills.
Average 1936-37 to 1938-39..	5,180	9,882	15,062	12,523
1943-44	3,346	20,805	24,151	30,955
1944-45	2,946	28,567	31,513	27,758
1945-46	651	26,494	27,145	25,329
1946-47	1,139	34,341	35,480	30,132
1947-48	762	34,114	34,876	31,401

11. *Coffee.*—Queensland is the only State in which coffee has been grown to any extent, and the results have not been satisfactory. The area of this crop reached its highest point in the season 1901-2 with 547 acres. Thereafter, the acreage fluctuated but on the whole with a downward tendency, and in 1947-48 only 2 acres with a production of 2,373 lb. were recorded.

12. **Other Crops.**—Miscellaneous small crops grown in Australia include chicory, cut flowers, herbs, ginger, liquorice and vegetable seeds.

§ 20. Bounties, etc.

1. **Bounties.**—The bounties paid by the Commonwealth Government during the year ended 30th June, 1948 amounted to £43,988. This amount refers only to bounties paid under the Bounties Acts and does not include financial assistance given to wheat-growers and other primary producers under other Acts. Particulars of the assistance so rendered by the Commonwealth Government are furnished hereafter. Details of the amounts paid as bounty during the years 1943-44 to 1947-48 are as follows:—

BOUNTIES : AUSTRALIA.

Total	28,605	48,426	76,116	94,765	43,988

(a) Rates subject to variation as prescribed.

2. **Other Financial Assistance to Primary Producers.**—(i) *General.* In addition to the payment of bounties mentioned in the preceding paragraph, financial assistance has been granted by the Commonwealth Government for the relief of wheat-growers, fruit-growers, and other primary producers. The amounts shown exclude such items as the expenditure on cattle tick control, banana industry, tobacco investigation and apple and pear research, which indirectly benefits the industries concerned, and exclude loans made to States to alleviate hardship suffered by primary producers in consequence of drought. The distribution as bounty, relief or subsidy has been made in the following manner.

Details of payments made prior to 1938-39 are given on page 847 of Official Year Book No. 36, while particulars for the years 1939-40 to 1943-44 will be found on page 965 of Official Year Book No. 37.

(e) Includes subsidy payments of £129,683 on nitrogenous fertilizers. (f) Includes subsidy payments of £163,813 on nitrogenous fertilizers. (g) Includes payment of £1,659,325 recovered in London. (h) Includes £3,484,729 recovered from the United Kingdom Government. (i) Includes £1,819,115 recovered from the United Kingdom Government. (j) Includes £150,000 recovered from the United Kingdom Government.

NOTE.—Minus sign (—) denotes an adjustment due to overpayment in previous years.

(ii) *Wheat-growers.* Details of payments made prior to 1938-39 will be found in Official Year Book No. 36. In 1938-39 a sum of £1,808,693, collected through the medium of a flour tax, was allocated for distribution as relief to wheat-growers.

Allocations to the States for the same purpose during the years 1944-45 to 1948-49 were £1,995,775 in 1944-45, £1,779,238 in 1945-46, £1,747,383 in 1946-47, £985,327 in 1947-48 and £1,319 in 1948-49. The rate of flour tax has been nil since December, 1947.

In addition to the foregoing amounts paid from flour tax, compensation was paid to wheat-growers in Western Australia, where acreage restrictions applied in respect of the 1942-43 to 1945-46 harvests. The amounts so paid during each year 1942-43 to 1947-48 were £535,000, £599,348, £586,964, £243,828, £2,619 and £97 respectively.

(iii) *Artificial Fertilizers Subsidy.* Prior to the 1939-45 War, assistance was given to primary producers, other than wheat-growers, in the form of a subsidy on artificial fertilizers generally; subject to certain provisions, the rate was 15s. for each ton of artificial manure used in the production of primary produce, but in 1936-37 this was reduced to 10s. per ton. The payment of this subsidy ceased on 30th June, 1939.

Because of the substantial increases in the price of superphosphate and their effect on the efficiency of the farming industry, the Commonwealth Government introduced a bounty on superphosphate produced and sold in Australia after 1st July, 1941. The rate of bounty was fixed at 25s. per ton, payable to manufacturers, who were required to adjust their prices so that consumers received the full benefit of the subsidy. From July, 1942 to September, 1948 a revised basis of subsidy payments operated under which payment was made to manufacturers under a system designed to stabilize the price of superphosphate in the face of rising costs and to return to producers a reasonable margin of profit. In September, 1948 a flat rate system was re-introduced, the rates of subsidy being £2 15s. per ton in Western Australia, £2 10s. per ton in Eyre Peninsula and £2 5s. 6d. per ton elsewhere. Subsidy has also been paid on nitrogenous fertilizers from 1943-44. From that year proceeds from sales under the equalization scheme, under which these fertilizers are handled, have been less than expenditure incurred by the equalization pool, and the deficiency in each year has been met by Commonwealth subsidy.

Details of the amounts paid in respect of subsidy on both superphosphate and nitrogenous fertilizers are shown in the table above.

(iv) *Dairy Industry.* The war-time demand for butter, cheese and processed milk products was such as to necessitate production being increased to the limit of existing resources. With this object in view the Commonwealth has subsidized production and so encouraged dairy farmers to maintain output at the highest level possible. The amounts paid since the introduction of the subsidy are shown above. These do not include the subsidies paid on the production of whole milk which is consumed directly and which amounted to £319,000 in 1943-44, £1,780,000 in 1944-45, £2,520,000 in 1945-46, £2,249,000 in 1946-47, £2,157,000 in 1947-48 and £564,000 in 1948-49. This subsidy was discontinued from 30th September, 1948.

(v) *Farmers' Debt Adjustment.* In addition to the assistance outlined above, the Loan (Farmers' Debt Adjustment) Act 1935 made provision for grants, totalling £12 million, to be made available to the States for the adjustment of farmers' debts. Of this amount, £10 million was allocated as follows:—New South Wales, £3,450,000; Victoria, £2,500,000; Queensland, £1,150,000; South Australia, £1,300,000; Western Australia, £1,300,000; and Tasmania, £300,000. The remaining £2 million was allocated in the same proportion, and was subject to review at a later date.

§ 21. Fertilizers.

1. *General.*—In the early days of settlement in Australia scientific cultivation was little understood. It was common, as in other new countries, for the land to be cropped continuously to a degree of exhaustion. This practice is very much less in evidence now than in the early days of Australian agricultural development. Under the guidance of the State Departments of Agriculture, scientific farming is now much more widely practised. The importance of fallowing, crop rotation, and the application of suitable fertilizers in adequate quantities is now appreciated by farmers. The introduction of the modern seed-drill acting also as a fertilizer-distributor has greatly facilitated the use of artificial manures and much land formerly regarded as useless for cultivation has now been made productive.

2. **Fertilizers Acts.**—In order to protect the users of artificial fertilizers, legislation has been passed in each of the States regulating the sale and prohibiting the adulteration of fertilizers. A list of these Acts and their main features is given in Official Year Book No. 12, p. 378.

3. **Imports.**—The Australian output of prepared fertilizers is derived chiefly from imported rock phosphates and is sufficient for local requirements.

The chief sources of Australia's normal supplies of rock phosphate were Nauru and the Gilbert Islands group. The war in the Pacific interrupted supplies from these sources and the bulk of the imports since 1941-42 have come from Algeria, Egypt and the Makatea Islands. During 1948-49, however, supplies from pre-war sources have been resumed on a large scale. Sodium nitrate is obtained chiefly from Chile.

The imports of manures during the five years ended 1947-48, compared with average imports for the period 1934-35 to 1938-39, are shown in the following table:—

FERTILIZERS : IMPORTS INTO AUSTRALIA.

Fertilizer.	Average 1934-35 to 1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

5. **Quantities Locally Used.**—Information regarding the area fertilized with artificial fertilizers and the quantity of artificial fertilizers (superphosphate, bonedust, nitrates, etc.) used in each State during the year 1947-48 is given in the following table. Details of the area manured with natural manure (stableyard, etc.) are no longer collected.

AREA FERTILIZED AND QUANTITY OF FERTILIZERS USED, 1947-48.

State or Territory.	Area Fertilized (Acres).			Fertilizers Used (Tons).		
	Crops.	Pasture Lands.	Total.	Crops.	Pasture Lands.	Total.
New South Wales	4,075,233	879,343	4,954,576	130,198	41,509	171,707
Victoria	3,769,125	4,461,025	8,230,150	157,817	244,826	402,643
Queensland	260,518	1,338	261,856	54,337	96	54,433
South Australia	3,377,126	1,390,858	4,767,984	152,357	71,896	224,253
Western Australia	3,900,493	2,004,612	5,905,105	190,840	101,883	292,723
Tasmania	185,061	322,477	507,538	23,032	18,913	41,945
Australian Capital Territory ..	7,747	9,795	17,542	373	497	870
Total	15,575,303	9,069,448	24,644,751	708,954	479,620	1,188,574

Particulars of the quantity of artificial fertilizers used in each State and Territory during each of the years 1943-44 to 1947-48, compared with the average for the five years ended 1938-39, are shown in the next table. These details include the quantity used in the top-dressing of pasture lands.

The serious diminution in the output of superphosphate during the war caused by the interruption of imports of rock phosphate necessitated the introduction of a system of rationing of supplies which adversely affected the yields from those crops which are mainly dependent upon the use of superphosphate.

QUANTITY OF ARTIFICIAL FERTILIZERS USED.

(Tons.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	A.C.T.	Total.

1947-48 ..	171,707	402,643	54,433	224,253	292,723	41,945	..	870	1,188,574

As mentioned in § 20 the Commonwealth Government has encouraged the use of artificial fertilizers by providing subsidies to primary producers.

6. **Local Production.**—Complete information regarding local production of fertilizers is not available. The number of firms engaged in the manufacture of chemical fertilizers in Australia for the year 1947-48 was 47, made up as follows:—New South Wales 14; Victoria, 8; Queensland, 7; South Australia, 7; Western Australia, 6; and Tasmania, 5. The production of superphosphate in Australia during 1947-48 amounted to 1,186,062 tons, the largest producing States being Victoria, Western Australia and South Australia.

§ 22. Ensilage.

1. **Government Assistance in Production.**—The various State Governments devote a considerable amount of attention to the education of the farming community in regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connexion with the design of the silos and the cutting and packing of the ensilage.

2. **Quantity Made.**—Information regarding the number of holdings on which ensilage was made and the quantity made during each of the seasons 1944-45 to 1947-48, together with respective averages for the five years ended 1938-39, is given in the following table:—

ENSILAGE MADE.

State.	Average 1934-35 to 1938-39.		1944-45.		1945-46.		1946-47.		1947-48.

(a) Not available.

The drought of 1902-3 drew increased attention to the value of stocks of ensilage and during the four seasons ended 1909-10 there was an increase both in the number of holdings on which ensilage was made and in the quantity produced. The accumulated stocks proved of great value during the 1914 drought, though far less than would have been the case if more attention had been paid to production during the previous years when there was a surplus of green fodder. The quantities made since that date have fluctuated considerably, but the output increased up to 1939-40 in which year the production of 303,495 tons was the highest yet recorded. During subsequent seasons output has declined noticeably and reached the extremely low level of 94,744 tons during the drought year 1944-45.

3. **Stocks Held on Farms.**—Details of farm stocks of ensilage, which were collected for the first time as at 31st March, 1943, are shown in the following table as at 31st March, 1944 to 1948:—

ENSILAGE : FARM STOCKS.

(Tons.)

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.

§ 23. Agricultural Colleges and Experimental Farms.

In most of the States agricultural colleges and experimental farms have been established with a view to the promotion of more scientific methods in agriculture stock-breeding and dairying. In the colleges, and on some of the farms, provision is made for the accommodation of pupils to whom both practical and theoretical instruction is given by experts in various branches of agriculture. Analyses of soils and fertilizers are made, manures are tested, and elementary veterinary science, etc., are taught, while general experimental work is carried on with cereal and other crops, not merely for the purpose of showing that it is practicable to produce certain crops in a given place, but to show also how it is possible to make farming pay in the locality. Opportunities are afforded for practice in general agricultural work, and instruction is given in the conservation of fodder, in cheese and butter making, in the management breeding and preparation for the market of live-stock, in the eradication of pests and weeds, and in carpentering, blacksmithing and other trades.

Expert lecturers visit the various agricultural and dairying centres, and there is a wide distribution of periodical agricultural gazettes and bulletins.

§ 24. Employment in Agriculture.

Particulars relating to the number of males employed in agriculture are available up to 1941-42 in Official Year Book No. 36, page 852, and also in previous issues. Similar details for later years are not available, but statistics of permanent employment on rural holdings may be found in § 25 following.

§ 25. Number and Area of Rural Holdings and Permanent Employment Thereon.

1. General.—The statistical data included in the chapters relating to agricultural, pastoral and dairying activities are obtained at an annual census taken in each State under the direction of the State Statisticians. This census is taken as early as practicable after the conclusion of the main harvest and covers every holding within the boundaries of each State.

A holding in Australia has been defined by the States on a more or less uniform basis and discrepancies which exist are not of sufficient importance to vitiate any comparisons. For the purpose of these statistics, a holding may be defined as land of one acre or more in extent, used in the production of agricultural produce, the raising of live stock or the products of live stock.

With the exception of Queensland, particulars of the number of holdings included in these censuses are available for all States over a series of years. It was not until 1938-39, however, that a complete tabulation became available for Queensland.

2. *Number and Area.*—The following table shows the number and area of the holdings in each State for the years 1938-39 and 1943-44 to 1947-48.

RURAL HOLDINGS : NUMBER AND AREA.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Australian Capital Territory.	Total.

3. *Analysis of Holdings.*—(i) *General.* It is not possible to classify these holdings according to the purpose for which they are used. This arises from a number of factors, the chief of which is mixed farming. The general trend in Australia is for farmers to diversify their activities and consequently it is very difficult to determine whether the purpose of many holdings is mainly agricultural, pastoral or dairying, or any of these in combination.

(ii) *New South Wales.* Such an analysis is made in New South Wales but, as pointed out by the Statistician, it should be regarded as an approximation. It is compiled from the description of purpose given by the occupier of the holding at the time of the Census. This tabulation reveals that there were 71,105 holdings so classified in New South Wales during 1945-46. Of this number 10,447 described their main purposes as agricultural only, 21,590 as pastoral only, 12,157 dairying only, 3,973 as poultry, pig or bee farming, while the main purpose of the remaining 22,998 holdings was stated to be a combination of two or more of these activities. Holdings used mainly for residential or other purposes but which were used partly for the production of rural products have been omitted. These numbered 3,008 during 1945-46.

4. Special Tabulation Relating to Rural Holdings, 1947-48.—With the co-operation of State Statisticians, a series of special tabulations relating to rural holdings was undertaken for all States for the year 1947-48. The tabulations, which covered a series of size tabulations of all rural holdings, holdings growing wheat for grain and those carrying live stock, have been published in detail in the *Production Bulletin* No. 42, 1947-48, Part II.—*Primary Industries and Total Recorded Production*. The following table shows particulars of the number and area of rural holdings classified according to the size of holdings.

RURAL HOLDINGS : NUMBER AND AREA CLASSIFIED IN AREA SERIES, 1947-48.

CHAPTER XXI.

FARMYARD, DAIRY AND BEE PRODUCTS.

§ 1. Introductory.

1. *General.*—The introduction of cattle into Australia and the early history of the dairying industry are referred to in some detail in earlier issues of this publication. It may here be noted that the original stock has been crossed with specially imported stud cattle, while further judicious crossings of strains have resulted in an increased and improved milk supply. In Australia dairy cattle thrive in the open throughout the year, local climatic conditions demanding no protection other than tree plantations for shelter, and in certain districts rugging in the coldest weather. Indigenous and imported grasses furnish food during the greater part of the year, and winter fodder, when necessary, is given to the cattle in the fields. With the wider application of scientific methods in the treatment of animals and pasturages and in the processes of manufacture, coupled with herd testing and effective State supervision, the dairying industry has shown rapid expansion. It has been demonstrated that Australian production and marketing methods do not adversely affect the vitamin content of the butter and that the loss during cold storage even for as long as two years is insignificant.

2. *Mixed Farming.*—Dairying is not, as formerly, wholly confined to agriculturists, since many graziers in a large way of business also give it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places remote from the metropolis well-equipped factories have been established. The extent to which dairy cattle were run in conjunction with pig raising and wheat growing in 1947-48 is shown in the relevant tables published in the section "Special Tabulations Relating to Rural Holdings: 1947-48" of *Production Bulletin No. 42—Part II.—Primary Industries and Total Recorded Production*.

3. *Employment.*—The numbers of persons employed in primary industry are ascertained at the annual census of rural production. The particulars collected are in respect of those persons who were permanently engaged in the actual work of the farm and include owners, lessees, tenants or sharefarmers, relatives over 14 years of age not receiving wages, and other permanent employees, including managers and relatives, working for wages or salary. Details of the numbers so engaged are given in Chapter XX.—*Agricultural Production*, § 25.

For the years up to 1939-40, information was also collected which enabled the classification of each holding according to the chief purpose for which it was used, thus obtaining a distribution of employment in the three main classes, viz., Agriculture, Pastoral and Dairying. However, because of difficulties in determining with precision the chief purpose for which holdings are used, this information has since been omitted from the schedules. Consequently it has not been possible to continue to compile details of employment in the dairying industry from data obtained from this source.

Details of the number of persons who described themselves at the population census of 30th June, 1947 as being engaged in dairy farming are shown in the following table:—

EMPLOYMENT IN DAIRY FARMING : CENSUS, 30th JUNE, 1947.

Sex.	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	A.C.T.	N. Ter.	Aust.

1948-49..	2,339,885	818,725	165,830	43,202	144,916

(a) Not available.

5. Official Supervision of Dairying Industry.—Dairy experts of the various State Agricultural Departments give instruction in approved methods of production, and inspect animals, buildings and marketable produce. A high standard of cleanliness, both of *personnel* and *materiel*, prevails.

The export trade is regulated by the terms of the Commonwealth Commerce (Trade Descriptions) Act 1905-1933, and regulations thereunder. It will be sufficient to state here that the true trade description, etc., must be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

§ 2. Dairy Cattle and Dairy Products.

1. Dairy Herds.—Due to the lack of uniformity in the schedules used by the several States in the collection of live-stock statistics, it is not possible to measure with precision the growth of the dairy herds of Australia prior to 1943. However, statistics of dairy cows, which provide a reliable measurement of this development, show that in 1918-19 there were 1,902,036 dairy cows in milk and dry, compared with 2,345,070 in 1928-29 and 3,209,510 in 1938-39. This latter figure was sustained until March, 1944, but has since declined, the number recorded at 31st March, 1949, being 3,158,610. In New South Wales, Victoria, South Australia and Tasmania the proportion of dairy cattle to all cattle is high. In Queensland, the Northern Territory and Western Australia there is a greatly preponderating number of other cattle, the main object in these areas being the production of beef. Dairying, however, has developed greatly in southern Queensland since 1914-15, and the largest contribution to the Australian increase in dairy production has been made by this State. Since 1930 the number of dairy cows has declined in both Queensland and New South Wales while significant increases have occurred in Victoria and South Australia. The numbers of dairy cows for 1945 to 1949 shown in the following table refer to those recorded by farmers as being in milk and dry as at 31st March. The figures shown for the years 1935 to 1939 cover the same categories, but the period differs in some States (*see* footnote (a)). To this extent the figures lack comparability.

NUMBER OF CATTLE AND DAIRY COWS (IN MILK AND DRY).

(a) Includes other milking cows not in registered dairies.

(b) Excludes Northern Territory.

A graph showing the distribution of dairy cattle in Australia at 31st March, 1948 appears on page 896 of this Year Book.

2. **Size of Dairy Herds.**—A series of special tabulations relating to rural holdings undertaken for all States for the year 1947-48 covered, *inter alia*, a classification of holdings with dairy cattle according to size of herd, details of which are shown below. Full details of the tabulations showing the following size classifications of holdings with dairy cattle are published in *Production Bulletin* No. 42—Part II.—*Primary Industries and Total Recorded Production*:—(i) dairy cattle holdings classified in area series and according to size of herd; (ii) dairy cattle holdings also growing wheat for grain, similarly classified, and (iii) dairy cattle holdings also carrying pigs classified according to size of the respective herds.

It should be specially noted that the particulars shown below for New South Wales relate to registered dairies only and to this extent are not comparable with the details for other States, which cover all holdings with dairy cattle.

(a) Registered dairies only.

(b) Excludes Northern Territory.

3. **Factory System.**—(i) *General.* Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories has resulted in a considerable reduction in the cost of manufacture, since improved appliances such as refrigerators, etc., may be profitably worked at the larger establishments. The product is also of a more uniform quality, and few farmers prefer to convert the cream rather than send it to the factory. Formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, but separator butter requires less than $2\frac{1}{2}$ gallons.

(ii) *Number of Factories.* The factories in Australia for the manufacture of butter, cheese and condensed milk numbered 440 in 1947-48. They were distributed among the States as follows:—New South Wales, 107; Victoria, 148; Queensland, 101; South Australia, 46; Western Australia, 18; and Tasmania, 29. More details regarding numbers of factories, output, etc., are given in Chapter XXIV.—“Manufacturing Industry”.

4. **Butter and Cheese—Stabilization Schemes.**—(i) *Voluntary Plan.* During the period from January, 1926 to April, 1934, a voluntary scheme known as the “Paterson Plan” was in operation and had the effect of stabilizing the price of butter in Australia. The scheme provided for the payment of a levy on all butter produced in Australia sufficient to pay a bounty on export which ranged from 3d. to 4½d. per lb. The local price was raised by the amount of the bounty per unit while the return to the producer

on all butter produced was increased by approximately the difference between the rate of bounty paid and the rate of levy charged. The scheme, which continued until 25th April, 1934, did not receive the full support of all butter manufacturers.

(ii) *Compulsory Plan.* On 1st May, 1934 the "Paterson Plan" was superseded by a compulsory price equalization plan. The object of this scheme was to maintain local prices for butter and cheese independently of prices realized for exports. The Dairy Produce Act was passed by the Commonwealth Parliament towards the end of 1933, and at the same time complementary legislation was passed by the Parliaments of New South Wales, Victoria, Queensland and Tasmania. As a result of a referendum among producers held in 1936, Tasmania withdrew from the plan and the State Act expired. In the Commonwealth Act power was given to regulate interstate trade while the State Acts were designed to regulate trade within the respective States. The authority set up by each State Act fixed the proportion of the State's production to be sold within the State, and the Commonwealth Act protected this allocation by regulating the movement of butter and cheese from one State to another and so ensured the removal from the Australian market of the surplus production.

The compulsory plan was invalidated by the decision in 1936 of the Privy Council which declared in the James (Dried Fruits) Case that the Commonwealth had no power under the Constitution to regulate trade between the States.

(iii) *Equalization Scheme.* Since the Privy Council decision, the butter price stabilization scheme has continued to operate by voluntary action based on the agreements between the manufacturers and the Commonwealth Dairy Produce Equalisation Committee Limited. The Committee, which comprises members of the State Dairy Products Boards and other persons representing the industry, enters into agreements with manufacturers to secure to them equal rates from sales of butter and cheese, and for this purpose may fix basic prices at which these products sold in Australia or abroad are to be taken into account. The effect is that local and export trade are distributed in equitable proportions among the manufacturers by means of quotas. The Committee fixes basic prices and equalizes returns to factories through an Equalisation Fund. The States originally participating in the scheme were New South Wales, Victoria, Queensland, Tasmania in respect of both butter and cheese, and South Australia in respect of cheese. South Australia and Western Australia entered the scheme in respect of butter on 1st April, 1946 and Western Australia extended its participation to include cheese in January, 1947.

The home consumption prices of butter and cheese were fixed by the Commonwealth Prices Commissioner up to 19th September, 1948, from which date prices have been controlled by State Governments.

5. *Commonwealth Subsidies.*—(i) *Butter, Cheese and Processed Milk Products.* Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided subsidies on milk supplied for the manufacture of butter, cheese and processed milk products. Subsidies were paid on a seasonal basis prior to 1st April, 1946, but from that date have been on a flat rate basis. Subsidies are distributed by the Commonwealth Dairy Produce Equalisation Committee Limited through factories to milk producers by payments on butter, cheese and processed milk products manufactured. Subsidy on milk supplied for the manufacture of processed milk products was discontinued from 1st July, 1948.

The following table shows particulars of the rates realized on local, interstate and overseas sales and the average equalization and subsidy rates in operation for the years ended June, 1939 and 1946 to 1950 in respect of butter and cheese.

(a) Not yet available. (b) Interim rates. (c) Lower rates were determined for cheese sold in these years for processing for local consumption.

Following representations by industry organizations, the Commonwealth Government established the Joint Dairy Industry Advisory Committee in November, 1946, comprising a chairman nominated by the Government, four representatives of Commonwealth Government Departments and four industry representatives from the several States. The Committee's functions, broadly, are to advise and assist in conducting cost and other surveys of dairy farm production and to act as an advisory body to the Government in these matters. Since 1st April, 1947, the rates of over-all return to milk producers determined by the Commonwealth Government for the purpose of subsidy payments have been based on recommendations made by the Committee following surveys of production costs in the dairy industry.

From 1st July, 1948, export prices for butter, including those operating under the United Kingdom Dairy Products Contract have exceeded the f.o.b. equivalent of the rate of over-all return to factories, and the Commonwealth Government, with the concurrence of the Australian Dairy Produce Board has established a Dairy Prices Stabilization Fund, in which excess returns from exports are placed for the purpose of stabilizing returns from exports for the period of the contract. Since July, 1948, subsidy payments have been applied wholly to butter and cheese sold for consumption in Australia.

(ii) *Whole Milk.* In addition to the subsidies referred to above, the Commonwealth Government has also subsidized the production of whole milk consumed directly. The subsidy rates vary according to States, regions within the State and the seasonal period.

Commonwealth subsidy on whole milk was paid during the year 1948-49 in respect of milk supplied up to 30th September, 1948, but was discontinued after that date. Details of the amounts distributed during each year are shown in the following table:—

(c) Includes 689,989 gallons of milk, the produce of Queensland, sent to factories in New South Wales. (d) Not available for publication. (e) Includes particulars of States marked (d).

(f) Includes milk used in the production of condensed, concentrated and powdered milk, etc. (g) Includes 315 tons of butter made from cream, the produce of Victoria and Queensland.

(h) Includes 796 tons of butter made from cream, the produce of New South Wales. (i) Includes 132 tons of butter made from cream, the produce of New South Wales. (j) Estimated. (k) Includes 181 tons of cheese made in establishments not classified as factories.

7. **Whole Milk.**—(i) *Production and Utilization.* During the five years ended 1938-39 approximately 80 per cent. of Australia's milk supply was used for butter-making, 4 per cent. for cheese manufacture, 2 per cent. for condensary products and 14 per cent. for fluid consumption and other purposes. There has since been a considerable decline in the proportion of milk used for butter-making with corresponding increases in the quantities used for other purposes. In 1948-49, 64.4 per cent. of the total milk supply was used for butter, 7.7 per cent. for cheese, 7.2 per cent. for condensary products and 20.7 per cent. for other purposes.

Details of the production of whole milk for various purposes are shown in the following table for each year 1944-45 to 1948-49 in comparison with the average for the years 1934-35 to 1938-39 :—

PRODUCTION AND UTILIZATION OF WHOLE MILK : AUSTRALIA.

('000 gallons.)

Year.	Total Production.	Quantity used for—			
		Butter (Factory and Farm).	Cheese (Factory and Farm).	Condensary Products.	Other purposes.
Average, 1934-35 to 1938-39	1,149,559	913,754	48,595	28,116	159,094
1944-45	1,012,830	670,206	76,533	62,440	203,651

1946-47	1,079,640	678,293	91,086	70,450	239,811
1947-48	1,173,105	763,049	90,121	78,113	241,822
1948-49	1,212,644	781,230	93,720	87,653	250,041

In the following table, particulars of production of whole milk in the several States are shown for the years 1944-45 to 1948-49, compared with the average for the five years ended 1938-39. Victoria is the principal milk-producing State and in 1948-49 output from that State, viz., 462.4 million gallons, represented 38.1 per cent. of total production. Output from New South Wales was 291.9 million gallons or 24.1 per cent. of the total and that of Queensland 277.2 million gallons (22.9 per cent.). Production in the remaining States accounted for 14.9 per cent. of the total Australian output.

(ii) *Production per Cow.* The annual quantity of milk produced per dairy cow reaches as high as 1,000 gallons, varying greatly with breed, locality and season. For the whole of Australia for all dairy cows and for all seasons prior to 1916 it averaged considerably under 300 gallons per annum. In recent years not only has there been an improvement in the quality of the cattle, but the application of scientific methods has been continually extended, and the 300-gallon average has been exceeded in each year since 1924, the yield of 392 gallons in 1931 constituting a record. The annual average yields per cow given in the following table are based on the number of dairy cows which were in milk during any part of the year. The average given is, therefore, below that for cows which were yielding during the greater part of the year. It should be noted

that there are many difficulties attending the collection of particulars of the total quantity of milk obtained during any year. In addition, there is the further difficulty of ascertaining with reasonable accuracy the average number of cows in milk during the same period. The average yield per cow shown hereunder may be accepted as sufficiently reliable to show the general trend :—

(b) Excludes Northern Territory.

8. Butter Production.—There was a steady increase in the annual output of butter for many years prior to the 1939-45 War. The average annual production rose from 126,000 tons for the five years ended 1928-29 to 195,000 tons for the five years ended 1938-39.

Following the record output of 212,000 tons in 1939-40, there was a steady decline in butter production until 1946-47, when 143,300 tons were produced. The factors contributing to this decline include unfavourable seasons, transfer of man-power owing to the war, shortages of fertilizers for pastures and change in some factories from butter production to the manufacture of cheese and preserved whole milk products. Output increased to 162,100 tons in 1947-48 and to about 165,800 tons in 1948-49. The foregoing figures include butter produced on farms which has shown a steady decline from about 8,700 tons in 1938-39 to 4,500 tons in 1947-48.

The following table shows production of butter in factories in each State for the years 1944-45 to 1948-49, compared with the average for the five years ended 1938-39.

9. **Cheese Production.**—For many years the production of cheese in Australia ranged about 13,400 tons per annum. By 1932-33 production had risen to 16,500 tons and, apart from minor fluctuations, has continued to rise until 1948-49, when the record output of approximately 43,200 tons was recorded. The States contributing chiefly towards this increase are Victoria, Queensland and South Australia.

The following table shows production of cheese in factories in each State in the years 1944-45 to 1948-49 in comparison with average output during the years 1934-35 to 1938-39 :—

CHEESE PRODUCTION IN FACTORIES.

(Tons.)

10. **Condensed, Concentrated and Powdered, etc. Milk Production.**—The manufacture of these products has expanded greatly since 1938-39—to meet the needs of the Services during the 1939-45 War and for export purposes since the war. The output of condensed milk (sweetened and unsweetened) in 1948-49 was 166.5 per cent. higher than in the three years ended 1938-39 while that of powdered milk (full cream and skim) was 167.2 per cent. higher. Over the same period the quantity of whole milk used in the manufacture of the products shown below increased from 28.1 million gallons to 86.2 million gallons or by 206.8 per cent. These products are manufactured mainly in Victoria, which produced 64.8 per cent. of the total in 1948-49. New South Wales accounted for 20.8 per cent. of the total in that year, the remaining States producing 14.4 per cent.

The following table shows details of the output of condensed, concentrated, powdered, etc. milk during the years 1944-45 to 1948-49, compared with the available details for the years 1936-37 to 1938-39.

(b) Incomplete.

(c) Subject to revision.

11. **Local Consumption of Butter and Cheese.**—The production of butter and cheese less net exports and adjusted to account for movements in stocks, represents the quantity available for consumption in Australia.

As previously mentioned, the quantity of butter required by the Armed Services based upon Australia limited supplies during the war years for export overseas and for consumption in Australia. The former had diminished to such an extent that, in order to prevent further decline, it became necessary to introduce a system of butter rationing on 7th June, 1943. The rate was fixed at 8 oz. per head per week, but was reduced to 6 oz. per week as from 7th June, 1944. Butter rationing was discontinued from 16th June, 1950.

As a result of rationing, butter consumption in 1948-49 was 24.3 lb. per head per annum compared with an average of 32.9 lb. during the years 1936-37 to 1938-39. The rationing of butter has been associated with increased cheese consumption which amounted to 5.1 lb. per head in 1948-49 compared with 4.4 lb. pre-war.

The following table shows details of the production and disposals of butter and cheese for the periods 1946-47 to 1948-49, compared with the average for the years 1936-37 to 1938-39.

PRODUCTION AND DISPOSAL OF BUTTER AND CHEESE: AUSTRALIA.
(’000 tons.)

(a) Figures for butter include dry butter fat, ghee and tropical spread expressed as butter as well as butter shipped as ships' stores. Figures for cheese include ships' stores after allowance for a small quantity of cheese imported. (b) Not available. (c) Includes allowance for movements in stocks other than those held in main cold stores.

12. **Marketing of Dairy Products.**—(i) *The Dairy Produce Export Control Act* 1924-47. Introduced at the request of the dairying industry this Act was passed by the Commonwealth Parliament with the object of organizing the overseas marketing of Australian dairy produce. A Dairy Produce Control Board was appointed and was in existence from 1924 to 1935. It dealt with matters relating to the organization and supervision of overseas marketing of dairy produce. In the course of its functions the Board regulated shipments to ensure regularity of supply in the London market, controlled forward selling, obtained reductions in overseas freights and insurance rates, and participated in an advertising campaign in the United Kingdom.

Prior to the appointment of the Dairy Produce Control Board a voluntary body—the Australian Dairy Council—was established to advise and make recommendations to the Governments on problems connected with the production, manufacture and quality of dairy produce, pasture improvement and diseases of dairy cattle.

Following a recommendation by the Australian Agricultural Council the functions of these bodies were combined by an amending Act of 1935 under the Australian Dairy Produce Board and provision was made for the allocation of money from the Board's funds for research and investigation into pastures, diseases of dairy cattle and the quality of butter. The functions of the Board were later extended to enable it to advise the Government in connexion with the transport of dairy produce, the securing of new markets, the expansion of existing markets and other matters.

The Australian Dairy Produce Board was re-constituted in 1947 by an amendment to the Dairy Produce Export Control Act, reducing its membership from seventeen to twelve. The functions of the Board were extended to enable it to purchase and sell, on behalf of the Commonwealth, dairy produce intended for export, and to control all matters concerning the handling, storage, protection, treatment, transfer and shipment of the produce so purchased or sold.

(ii) *The Dairy Produce Export Charges Act 1924-1937.* This Act provides for the imposition of a levy on all butter and cheese exported from Australia to cover the administrative expenses of the Board and for advertising and other purposes. The rate of the levy is fixed by regulation.

(iii) *War-time Marketing.* Reference to the marketing arrangements which operated during the 1939-45 War was made in Chapter XXVIII. "Miscellaneous", pp. 1108-1110 of Official Year Book No. 36.

13. *Butter and Cheese Contracts.*—(i) *General.* Details of the war-time contracts arranged between the United Kingdom and Australian Governments whereby the former undertook to purchase Australia's surplus butter and cheese were shown on pp. 985 and 986 of Official Year Book No. 37. The purchase of butter and cheese in 1944-45 and subsequent years has been covered by the Long-Term Purchase Agreement (*see sub-par. (ii) following*).

For the years 1943-44 to 1947-48 the United Kingdom Government reimbursed the Australian Government to the extent of subsidy paid on butter and cheese exported on Ministry of Food account. Since 1st July, 1948, however, contract prices paid by the United Kingdom Government have been in excess of the basic return to the Australian manufacturer. As a result, subsidy on butter and cheese exported was discontinued from that date and returns from export sales in excess of the basic return to the producer have been credited to the Dairy Prices Stabilization Fund (*see par. 5 (i) ante*).

The following tables indicate the prices per cwt. f.o.b. Australian currency for the various grades of butter and cheese for the several war-time contracts, together with the prices payable under the Long-Term Purchase Agreement up to the year 1949-50.

(ii) *Long-Term Purchase Agreement.* Early in 1945 an agreement was completed between the United Kingdom and Australian Governments covering the sale to the former of Australia's surplus butter and cheese for the four years 1944-45 to 1947-48. The agreement was later extended to cover the period up to 30th June, 1955. In the original agreement, prices were stipulated for the initial two years ended June, 1946, while any variation in price for the succeeding years was not to exceed 7½ per cent. of the price paid for the preceding year. In accordance with the terms of the agreement, prices were increased for the year 1946-47 and further increases were agreed upon for the years 1947-48 to 1949-50 following representations from the Australian Government after having considered recommendations by the Joint Dairy Industry Advisory Committee (*see par. 5 above*).

The United Kingdom undertakes responsibility for storage costs if unable to provide ships to lift butter and cheese from store after 90 days, and makes advances against stored stock in this event.

The usual provisions relative to quality, packing, etc. continue to obtain, but in regard to payment the United Kingdom pays 97½ per cent. of the value on shipment and a further 2½ per cent. 60 days after the date of the last bill of lading in respect of butter and cheese carried by the vessel.

14. *Oversea Trade in Butter, Cheese and Milk.*—The production of butter and cheese in Australia is considerably in excess of local requirements and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon the seasonal conditions. In the immediate pre-war period the quantity of butter and cheese consumed annually in Australia was about 101,000 tons and 13,400 tons respectively, and production in excess of these amounts was available as surplus for export. In the post-war period rationing has restricted Australian consumption of butter to about 85,000 tons but production is still considerably below the pre-war level, the net result being reduction in the exportable surplus.

Because of war-time requirements due to the presence of Australian and Allied Servicemen in the South-West Pacific Area, exports of butter to the United Kingdom were reduced to a level lower than that attained in any year since 1926-27. During 1938-39, 97,000 tons, or 95 per cent. of all butter exported, was shipped to the United Kingdom, but by 1944-45 exports to this country had decreased to 37,000 tons or 86 per cent. of the total quantity exported. In 1947-48 the quantity shipped to the United Kingdom was 76,000 tons (92 per cent. of the total exports).

With cheese, and for the same reason, increased production has been accompanied by decreased exports. In 1938-39 exports totalled 16,038 tons of which 15,500 tons were exported to the United Kingdom. By 1944-45, however, the quantity exported to the United Kingdom had declined to 2,800 tons or 18 per cent. of the total of 15,000 tons exported. Since the war cheese exports have increased greatly and in 1947-48 a total quantity of 22,900 tons was exported of which 17,500 tons or nearly 77 per cent. was shipped to the United Kingdom.

All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to the supervision, inspection and examination of officers appointed for that purpose. These commodities are graded according to quality which has been fixed by regulation as follows :—Flavour and aroma, 50 points; texture, 30 points; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality; at 90 to 92 points, first quality; at 86 to 89 points, second quality; and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details, which include actual quantities by States, are to be found in *Production Bulletin* No. 42, Part II.

§ 3. Pigs and Pig Products.

1. Pigs.—Between 1928–29 and 1938–39 the number of pigs fluctuated around one million. In the latter year an upward movement commenced and continued until the record number of 1,797,340 was recorded in 1940–41. There was a decline in the following two years but the numbers rose again to 1,746,721 in 1943–44. Since that year there has been a continuous decline, the number recorded at 31st March, 1949 being 1,196,321. The distribution of pigs among the States and Territories at 31st March, 1949 was—New South Wales, 375,212; Victoria, 223,823; Queensland, 407,322; South Australia, 71,427; Western Australia, 80,689; Tasmania, 36,996; Northern Territory, 384; Australian Capital Territory, 468.

A more accurate index of the development of pig-raising in Australia is provided in the following table which combines, for each of the years 1938–39 to 1948–49, the number of slaughtering with the number returned.

NUMBER OF PIGS AND NUMBER SLAUGHTERED : AUSTRALIA.

Year.	Number of Pigs.	Number Slaughtered.	Year.	Number of Pigs.	Number Slaughtered.
1938–39	1,155,591	1,839,597	1944–45(a)	1,630,855	1,966,434
1939–40	1,455,341	1,952,552	1945–46(a)	1,425,709	1,727,924

1943–44(a)	1,746,721	1,828,456			

(a) Year ended 31st March. The numbers slaughtered relate to slaughtering for human consumption.

(b) Subject to revision.

Further details relating to pig numbers are given in Chapter XIX. "Pastoral Production." A graph showing the distribution of pigs in Australia at 31st March, 1948 appears on p. 898 of this Year Book.

2. Size of Pig Herds.—A series of special tabulations relating to rural holdings undertaken for all States for the year 1947–48 covered, *inter alia*, a classification of holdings carrying pigs according to size of herd, details of which are shown below. Full details of the tabulations showing the following size classifications of pig holdings are published in *Production Bulletin* No. 42—Part II.—*Primary Industries and Total Recorded Production* :—(i) pig holdings classified in area series and according to size of herd; (ii) pig holdings also growing wheat for grain, similarly classified; and (iii) pig holdings also carrying dairy cattle classified according to size of the respective herds.

HOLDINGS CARRYING PIGS : CLASSIFICATION ACCORDING TO SIZE OF HERD, 31st MARCH, 1948.

Size of Herd.	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust. (a)
Under 5	3,631	4,308	2,523	2,564	1,049	2,180	13	16,268

(a) Excludes Northern Territory.

3. **Pork.**—(i) *Production.* With Allied Servicemen in Australia during the war years, the demand for pork was considerably increased and producers were encouraged to increase production to the highest level attainable in order to meet Service requirements and maintain exports as far as possible. After these requirements had been met, the quantity available for civilian consumption was much less than that normally consumed. In some States the civilian consumption of pork was negligible, but in other parts of Australia, where transport difficulties precluded the marketing of pork in the main centres, civilian consumption was not prohibited. In the following table details of production in each State are shown for the years 1944-45 to 1948-49 compared with average production during the years 1934-35 to 1938-39.

PRODUCTION OF PORK (BONE-IN WEIGHT).

(Tons.)

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Northern Territory.	Australian Capital Territory.	Total.
Average, 1934-35 to 1938-39 ..	9,938	12,236	9,867	3,215	1,741	1,240	7	38	38,282
1944-45 ..	8,605	11,407	8,249	9,013	4,006	1,270	17	3	42,570
1945-46 ..	6,335	9,595	9,363	4,072	4,749	986	17	3	35,120
1946-47 ..	6,364	7,153	9,011	2,978	3,446	1,039	17	18	30,026
1947-48 ..	6,448	7,138	7,134	2,954	2,234	1,391	28	34	27,361
1948-49 ..	9,831	8,644	12,254	2,358	2,649	1,442	27	56	37,261

(ii) *Consumption.* For the three pre-war years ended 1938-39 the average annual production of pork was 46,000 tons, of which 14,000 tons were exported, leaving 32,000 tons, or the carcass equivalent of 10.4 lb. per head per annum, available for local consumption.

As in the case of other meats, the demand for pork for the Armed Services and for exports was so great that it was necessary to divert supplies from civilian consumption under the rationing scheme introduced in January, 1944. This resulted in the consumption of pork per head declining from the pre-war average of 10.4 lb. to 9.0 lb. in 1943, to 6.4 lb. in 1944 and to 4.9 lb. in 1945. After 1945 there was a reduction in exports and supplies to the Armed Services and in September, 1946, pork was made available to civilians in all States subject to coupon rationing. As a result, consumption per head rose to 5.9 lb. in 1946, 6.8 lb. in 1946-47 and 7.1 lb. in 1947-48. Preliminary details indicate a further rise in consumption to 7.4 lb. per head in 1948-49. In the following table details of the production and disposal of pork are shown for the periods 1937-39 and 1946-47 to 1948-49.

PRODUCTION AND DISPOSAL OF PORK (BONE-IN WEIGHT) : AUSTRALIA.

('000 tons.)

Year.	Changes in Stock.	Production (a)	Exports.	Canning.	Consumption in Australia.	
					Total.	Per head per annum.
Average, 1936-37 to 1938-39	46	14	..	32	10.4
1946-47 ..	4	30	8	3	23	6.8
1947-48	27	2	1	24	7.1
1948-49	37	9	2	26	7.4

(a) Includes an estimate of trimmings from baconer carcasses.

4. **Bacon and Ham.**—(i) *Production.* As in the case of pork, the increased demand for bacon and ham during the war years stimulated production to a level not previously attained. Production reached its peak in 1944-45 when 56,246 tons of bacon and ham were cured. This has been followed by a continuous decline in output in each succeeding year to 41,584 tons in 1948-49. Details of production are shown by States in the following table for the five pre-war years ended 1938-39 and each year 1944-45 to 1948-49.

PRODUCTION OF BACON AND HAM.

(Tons.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
Average, 1934-35 to 1938-39	9,963	7,614	9,269	2,950	2,013	970	I	32,780
1944-45	20,148	12,103	13,299	4,499	5,007	1,190	..	56,246
1945-46	17,409	9,377	10,699	5,239	4,608	1,255	..	48,587
1946-47	15,830	10,998	9,983	5,069	4,638	1,150	..	47,668
1947-48	14,175	11,159	10,142	4,884	4,232	1,317	..	45,909
1948-49	13,302	10,204	9,412	3,788	3,756	1,122	..	41,584

(ii) *Consumption.* For the three pre-war years ended 1938-39 the annual production of bacon and ham averaged 32,500 tons of which 1,000 tons were exported, leaving 31,500 tons, or 10.3 lb. per head per annum, available for local consumption. The presence of large numbers of Allied Servicemen in Australia during the 1939-45 War necessitated the diversion of civilian supplies. Bacon and ham were not included in the list of rationed meat but supplies to be placed on the civilian market were determined after the demands of the Services and export requirements had been met. Consumption per head declined in the early stages of the war but by 1944 it had been restored to the pre-war level and subsequently increased to 12.7 lb. in 1946-47. This was followed by a fall in consumption to 12.0 lb. in 1947-48 and 10.4 lb. in 1948-49. Details of production and disposal of bacon and ham for the periods 1937-39 and 1946-47 to 1948-49 are shown in the following table.

PRODUCTION AND DISPOSAL OF BACON AND HAM : AUSTRALIA.

§ 5. Poultry-Farming.

1. *General*.—Poultry-farming has been carried on in Australia for many years and the State Departments of Agriculture have encouraged its development by appointing experts to advise on the care and management of poultry and by conducting egg-laying competitions.

Originally the industry was conducted in conjunction with other branches of rural activity, mainly dairying, but it is now a specialized and distinct industry. It is from this source that the bulk of the commercial production is obtained. Practically all farms keep poultry for the purpose of supplying their own domestic requirements and in many cases some supplies from this source are also marketed. In addition, small numbers of fowls are kept in backyards of some private homes and this helps to maintain domestic needs particularly when eggs are in short supply.

2. *Numbers of Poultry*.—In pre-war years the numbers of the principal kinds of poultry was a normal feature of the annual census of live-stock in all States except Victoria and Tasmania. These data were collected on a restricted scale by all States in 1942-43, the details obtained being confined to farms of 1 acre or more producing eggs or poultry for sale. The collection has since been discontinued in some States. Because of their incompleteness, details of poultry numbers are not published.

3. *Recorded Production and Disposals of Eggs*.—(i) *Shell Eggs*. Available statistics of the production and disposals of eggs in Australia are restricted to those recorded by the Egg Boards of the several States.

Egg Boards, or authorities appointed to control the marketing of eggs, have operated in the States of New South Wales, Victoria and Queensland for some years, whilst in South Australia the Board commenced to operate in August, 1942. It was not until August, 1943 that Advisory Committees were established in Western Australia and Tasmania. These authorities were created under National Security Regulations. Statistics of recorded production of eggs for Australia as a whole are not available, therefore, prior to 1943-44.

In the following table details of receipts and disposals of eggs, as recorded by these authorities, are shown for Australia for the years 1943-44 to 1948-49.

**SHELL EGGS : RECEIVALS AND DISPOSALS RECORDED BY EGG BOARDS,

(a) Temporary and winter storage.

There has been a pronounced upward movement in the recorded production (i.e., receipts by Egg Boards, including producer agency sales) of eggs over the period covered by the previous table from 89,165,000 dozen in 1943-44 to a peak of 122,518,000 dozen in 1946-47. Receipts totalled 119,427,000 dozen in 1947-48 and 120,209,000 dozen in 1948-49. The movement in production in the respective States is shown in the following table.

SHELL EGGS : PRODUCTION(a) RECORDED BY EGG BOARDS.
(’000 dozen.)

State.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.
New South Wales ..	41,888	47,158	49,807	54,100	50,569	52,052
Victoria ..	23,228	27,953	30,933	37,110	36,220	32,842

Total	89,165	104,023	113,053	122,518	119,427	120,209

(a) Receipts from consignors and producer agents.

(ii) *Egg Pulp.* Prior to the 1939-45 War, production of egg pulp was about 7 million lb. per annum. This was used almost entirely for the manufacture of cakes, pastry and biscuits, only negligible quantities being exported. Production was expanded greatly during the war years to meet the requirements of the Armed Services and has since been maintained at a high level for export purposes and to meet increased local requirements.

Particulars of the production of whole egg pulp as recorded by the Egg Boards in the several States are shown in the following table.

LIQUID WHOLE EGG : PRODUCTION RECORDED BY EGG BOARDS.
(⁰⁰⁰ lb.)

State.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.
New South Wales ..	5,814	8,762	11,930	14,576	14,600	15,966
Victoria ..	5,031	7,626	8,296	12,854	16,139	14,579
Queensland ..	1,174	1,419	2,526	1,650	3,240	4,560
South Australia ..	4,495	4,605	7,122	7,073	8,510	7,663
Western Australia ..	902	883	1,122	1,295	1,834	1,782
Tasmania	500	519	247	361	129
Total	17,416	23,795	31,515	37,695	44,684	44,679

In addition to liquid whole egg, production was also recorded of liquid egg whites and liquid egg yolks. Output in 1948-49 amounted to 484,396 lb. and 321,634 lb. respectively compared with 472,131 lb. and 291,952 lb. respectively in the previous year.

(iii) *Egg Powder.* The production of dried egg powder was not established in Australia until 1942, when the industry was introduced to treat Australia's surplus eggs so as to maintain exports to the United Kingdom. The shortage of refrigerated shipping space precluded the export of shell eggs so they were converted into powdered form. Following the outbreak of war in the Pacific in December, 1941, when Australia undertook responsibility for the feeding of the fighting services in the South-West Pacific Area, the bulk of the egg powder produced was diverted, however, for use by Australian and Allied Servicemen. Since the termination of hostilities in 1945, the manufacture of egg powder has been continued for export purposes but has been considerably curtailed since 1946-47 and is now confined to one State. A market for this product in Australia has not yet been established due no doubt to the availability of fresh eggs.

Details of production of egg powder are shown in the table below.

PRODUCTION OF EGG POWDER.(a)
(⁰⁰⁰ lb.)

State.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.	1948-49.

Australia	3,471	4,779	3,563	4,318	1,583	864

(a) Dried whole egg and sugared egg powder.

The product now consists almost entirely of sugared egg powder. The details shown above exclude dry albumen and dried egg yolk, which amounted to 42,987 lb. and 39,756 lb. respectively in 1948-49.

4. **Consumption of Eggs.**—Statistics of egg production must necessarily be accepted with some reserve. Owing to the difficulties experienced in obtaining a complete census of output, it is more expedient to compute a figure based on the best data available. The production shown in the following table, which shows also details of exports and consumption, is based upon the records of Egg Boards of production from areas under their control plus an estimate of production from uncontrolled areas and an estimate of the production of "back yard" poultry-keepers. The estimates of total production obtained have been checked with data from other sources and found to be reasonably in accord.

ESTIMATED PRODUCTION AND DISPOSAL OF EGGS: AUSTRALIA.
(^{'000 tons.})(a)

Year.	Changes in Stock.	Estimated Total Production.	Exports (Eggs in Shell).	For Drying and Pulping.(b)	Consumption in Australia as human food.

1.75 oz.

(b) The average weight of an egg in Australia is taken as

5. **Marketing of Eggs.**—(i) *United Kingdom Contracts.* Commencing in 1939-40. annual contracts have been entered into between the United Kingdom and Australian Governments for the sale and purchase at agreed prices of Australia's surplus shell eggs, egg pulp and egg powder. During the war years lack of shipping facilities curtailed the export of shell eggs, while the demands of the Armed Forces based on Australia considerably reduced the quantity of egg powder available for shipment to the United Kingdom.

The contract for the 1947-48 season provided for the sale and purchase of Australia's surplus eggs and egg products at prices considerably in advance of those operating in previous years. The contract specified maximum quantities of 30 million dozen shell eggs, 13,500 tons of whole egg pulp, 2,700 tons of sugared egg powder and 450 tons of whole egg powder. The price for shell eggs was proportionately higher than for egg products in order to give effect to the United Kingdom's desire to obtain maximum shipments in the form of shell eggs.

Early in 1948 an agreement was entered into between the Governments of the Commonwealth and the United Kingdom covering the sale and purchase of eggs, egg pulp and egg powder for the five seasons 1948-49 to 1952-53. The agreement envisages progressive expansion in the export of eggs from Australia with ultimate objective target

of the equivalent of 105 million dozen eggs in all forms, representing further increases on those operating for 1947-48. Prices were determined for the initial three seasons of the agreement, i.e. 1948-49, 1949-50 and 1950-51, but following representations by the Australian Government in 1949 the United Kingdom Government agreed to vary the price provisions for the 1949-50 and later seasons. Revised prices for the 1949-50 season were agreed upon and prices for later seasons will be negotiated not later than 1st January in the preceeding season. Any variation in price is not to exceed $7\frac{1}{2}$ per cent. of the prices paid in the previous season. The agreement stipulates the practices to be followed in packing shell eggs to ensure the minimum of deterioration and specifies the following order of preference in the supply of eggs and egg products to the United Kingdom, viz. :— (i) eggs in shell (to be shipped between 1st June and 24th December of each season); (ii) frozen whole egg pulp; (iii) dried sugared egg; (iv) dried whole egg. Eggs suitable for export during the period June to December are not to be processed into pulp or powder. Payment of $97\frac{1}{2}$ per cent. of the contract price will be made at the time of shipment and the balance within 28 days of arrival in the United Kingdom.

The prices stipulated in the several contracts for eggs and egg products for the years 1945-46 to 1949-50 are shown in the following table. Contract prices in operation for the years 1939-40 to 1944-45 were shown on page 997 of Official Year Book No. 37.

EGGS AND EGG PRODUCTS: PRICES UNDER UNITED KINGDOM-AUSTRALIA CONTRACTS.

(a) Price for pack of 15 lb. per long hundred (ten dozens): proportionate adjustments made for other packs.

(ii) *War-time Marketing.* Details of the war-time control of egg marketing under Commonwealth legislation were given on page 998 of Official Year Book No. 37.

(iii) *Egg Export Control Act 1947.* Following the termination of Commonwealth control over the production and marketing of eggs on 31st December, 1947, functions relating to the local marketing of eggs reverted to State Egg Boards which became responsible for stabilizing prices and marketing of eggs produced in the respective States. In order to assist in marketing Australia's surplus production of eggs under the Long-Term Purchase Agreement with the United Kingdom, the Commonwealth established the Australian Egg Board under the Egg Export Control Act 1947. The Board, which commenced to operate on 1st January, 1948, is empowered to buy and sell, on behalf of the Commonwealth Government, eggs and egg products intended for export which comply with the provisions of the Export (Dairy Produce) Regulations. In addition, the Board is authorized to deal with all matters relating to the export of eggs and egg products from Australia, to make such experiments as are likely to lead to the improvement of the quality of Australian eggs and to promote their sale overseas. The Board consists of ten members, including six representatives of egg producers and one representative of the Commonwealth Government.

6. *Overseas Trade in Poultry Products.*—The Australian overseas export of poultry products has in the past been confined chiefly to eggs in shell and egg contents, which are consigned mainly to the United Kingdom. New South Wales, Victoria and South Australia are at present the largest exporters. Exports of eggs from Australia rose from less than 3 million dozen valued at £210,000 in 1928-29 to 21.7 million dozen valued at more than £1.1 million in 1934-35, but declined to 10.3 million dozen in 1939-40. A

high level of exports in 1940-41 was followed by a steep decline in 1941-42 and a further decrease in 1942-43 and 1943-44 to almost negligible quantities. Following a slight increase in 1944-45, exports rose to 7.3 million dozen in 1945-46 and to 17.5 million dozen in 1946-47. In 1947-48 exports of shell eggs fell to 14.5 million dozen valued at £1,575,073.

Prior to the 1939-45 War, exports of egg contents were small and in 1939-40 there was an excess of imports. During the war years, exports expanded greatly, mainly to meet Service requirements, and since the close of the war there has been further expansion. In 1947-48, 30.6 million lb. of egg contents, valued at £2,600,378, were exported.

Since the close of the war there has also been a remarkable increase in the exports of frozen poultry, which rose from 283,107 pair in 1945-46 to 957,724 pair in 1946-47 and to 1,870,623 pair, valued at £1,709,066 in 1947-48. The average for the pre-war years 1934-35 to 1938-39 was only 37,913 pair, valued at £29,744.

The oversea trade during the five years ended 1947-48 in comparison with the average for the five years ended 1938-39 was as follows :—

POULTRY PRODUCTS: OVERSEA TRADE, AUSTRALIA.

§ 6. Bee-Farming.

1. General.—Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming, but its place in Australia's rural economy is not very significant. The returns of honey from productive hives during 1947-48 gave an average of 83.5 lb. per hive and the average quantity of wax was 1.05 lb. per hive.

2. Production of Honey and Bees-wax.—The number of hives and the production of honey and bees-wax during the year 1947-48 are shown in the following table. As these details have been collected from holdings of one acre and upwards, any production from smaller areas is omitted and consequently the production is understated to that extent. In Victoria and South Australia, however, the compulsory registration of bee-keepers enables the collection to cover all producers and the production for these States is considered to be complete.

(a) Estimated.

The production of honey and bees-wax fluctuates considerably and is determined mainly by the flow of nectar from flora of the eucalypts, which varies greatly from year to year. However, in recent years there has been a pronounced upward trend in the output of honey and preliminary figures for 1948-49 indicate an all-time record of 53,203,000 lb., which exceeds the previous record of 30,996,000 lb. in 1946-47 by 22,207,000 lb. or 71.6 per cent.

The table hereunder shows the production of honey and bees-wax for the five years ended 1947-48 in comparison with the averages for the years 1934-35 to 1938-39.

3. **Value of Production—Gross and Net.**—(i) *General.* The following table shows the gross, local and net values of production which have been compiled by the Statisticians of the several States by uniform methods. These data are based upon actual records but, as previously explained, it is known that the production in some States is understated. As production costs are not known they are not taken into account, and consequently, the gross production valued at the farm and net values shown are identical:—

GROSS, LOCAL AND NET VALUE OF BEE PRODUCTS, 1946-47 AND 1947-48.

(£.)

4. **Oversea Trade in Bee Products.**—Prior to the 1939-45 War the production of honey exceeded Australian requirements and a small quantity was available for export. As a result of increased production, exports have risen considerably since 1938-39, when a quantity of 687,000 lb. of honey, valued at £13,957, was shipped. In 1947-48 the record quantity of 14.99 million lb., valued at £579,285, was exported.

The wider use of frame hives has reduced the production of wax, and as a result the quantity imported generally exceeds that exported, although due to the exceptionally good seasons in 1946-47 and 1947-48 production was high and exports exceeded imports by 31,545 lb. and 96,587 lb. respectively in these two years.

Particulars of the oversea trade in honey and bees-wax are shown in the following table for the five years ended 1947-48 in comparison with the average of the years 1934-35 to 1938-39.

Eggs in shell	'000 doz.	283,315	33,537	69,072	81,330	115,613	154,523
	£	12,834,701	3,663,597	8,075,280	9,286,567	13,459,798	21,547,810

2. *Butter.*—(i) *Imports.* Australia has for many years supplied a large proportion of the butter imported into the United Kingdom. The quantity in 1948 amounted to 1,454,965 cwt., or 26.68 per cent. of the total importation. The Australian contribution was valued at £15,896,289 and was exceeded by that received from New Zealand and Denmark. Australia and New Zealand combined supplied 76.52 per cent. of the total quantity imported during 1948 and Denmark, 19.29 per cent.

In the following table particulars of the quantity and value of butter imported into the United Kingdom are shown for the years 1938 and 1948 according to country of origin.

BUTTER : IMPORTS INTO UNITED KINGDOM.

Country from which Imported.				1938.		1948.	
				Quantity.	Value.	Quantity.	Value.
				Cwt.	£	Cwt.	£
New Zealand	2,592,251	14,524,140	2,717,701	30,091,466
Australia	1,797,811	9,629,939	1,454,965	15,896,289
Canada	30,017	158,343

Total	9,517,913	50,873,133	5,452,829	67,843,311

(ii) *London Prices.* Fluctuations in prices in London during the years 1938–39 and 1939–40 are shown in the following table. Until September, 1939 the prices quoted represent the mean of the top prices quoted weekly for choicest salted Australian butter together with their f.o.b. equivalents in Sydney and Melbourne in terms of Australian currency. Since September, 1939, the price represents that fixed in accordance with the contract between the Governments of Australia and the United Kingdom for choicest Australian butter. Pence have been omitted throughout.

AVERAGE PRICE PER CWT. OF AUSTRALIAN CHOICEST BUTTER IN LONDON
(WITH F.O.B. EQUIVALENTS IN AUSTRALIAN CURRENCY).

(a) Sydney and Melbourne. (b) Equivalent of contract price. (c) Contract price f.o.b. Australian ports. Equivalent under pre-war conditions would be 122s. stg. covering the period 1939 to 1942, 126s. stg. during 1942 to 1944, 161s. stg. during the contract period 1944 to 1946, 185s. stg. during 1946-47, 215s. stg. during 1947-48, 245s. stg. in 1948-49 and 262s. stg. in 1949-50.

3. Cheese.—The value of cheese imported into the United Kingdom in 1948 was £27,388,935, of which £10,927,535 was received from New Zealand, £7,412,689 from the United States of America and £2,821,877 from Canada. Imports from Australia during 1948 were valued at £2,411,454.

4. Bacon and Ham.—Of a total import in 1948 of bacon and ham valued at £28,874,976, Canada supplied £18,814,574, Denmark, £5,420,420 and Netherlands, £956,854.

5. Pork.—The value of the United Kingdom imports of pork (frozen and chilled) was £1,238,895 in 1948. Imports from New Zealand, £1,038,919 and Australia, £199,210 comprised practically the whole of the imports into the United Kingdom.

6. Eggs.—In 1948 the value of eggs imported into the United Kingdom was £25,158,983, comprising eggs in shell, £21,547,810 and dried eggs, £3,611,178. The Australian share in this trade amounted to £2,131,208. Eggs in shell were supplied by Denmark, £6,474,049 and Canada, £6,333,175. The principal exporters of dried eggs to the United Kingdom were Canada, £2,874,552 and the United States of America, £445,888.

7. Milk Products.—In 1948 the value of powdered and preserved milk imported into the United Kingdom was £4,943,281, comprising condensed milk, sweetened, £2,555,751, condensed milk, unsweetened, £582,837 and powdered milk, £1,804,693. New Zealand supplied the major portion of the imports (£1,023,967), Australia, £221,583 and Eire, £202,657 being the next largest exporters.

8. Other Products.—The imports into the United Kingdom from Australia of poultry and frozen rabbits and hares amounted to £1,290,504, and £1,566,463 respectively, while those of bees-wax, game, lard and honey in 1948 were unimportant.

CHAPTER XXII.

FORESTRY.*

§ 1. General.

1. **Objects of Forestry.**—Forestry is a profession based on science, art, economic and business principles, which aims to protect and treat forests as restorable resources to provide their maximum direct and indirect benefits to a country.

The direct benefits lie in the providing of essential commodities such as structural timber, poles, piles, sleepers, pulpwood, firewood, tans, oils, resins, etc., the provision of an avenue for the healthful employment of labour in the rural forestry and sawmilling industry as well as in the transport of timber by rail, road, and water, and in numerous industries directly dependent on forest produce as a raw material. The history of all countries shows that these direct benefits are never fully appreciated until they are seriously reduced following reckless exploitation and absence of conservation measures.

The indirect benefits include regulation of stream flow from catchment areas, for a forest cover provides ideal conditions for the maximum penetration into the soil of rainfall and other precipitations which then become available for the perennial flow of streams. As a result, surface run-off after heavy rain is reduced and therefore floods are minimized in number and severity and as a corollary, the ill effects of reduced and/or intermittent flow of streams in the non-rainy season are minimized. Consequent on their action in reducing surface run off in the rainy season, forests have very marked effect in minimizing the ravages of water erosion. The presence of forests in drier wind swept areas also lessens the ill effects of æolian or wind erosion. As with the direct benefits, the indirect benefits of forests unfortunately are seldom appreciated until disastrous floods, siltation of rivers and reservoirs, washing away or blowing away of the topsoil, landslides, tearing of gullies out of hillsides and deposition of stones, rocks and other debris on fertile lands following the destruction of forests, becomes a matter of public concern.

Australia has a particular interest in water and soil conservation for several reasons. The area suitable for agricultural and pastoral development is not so large that material reduction in extent or deterioration of productive capacity cannot but limit expansion and retard development; the topographical soil and climatic conditions of many parts of Australia render them potentially highly susceptible to water and wind erosion; to ensure successful cropping of very large areas of land in Australia, millions of pounds have been spent on water conservation and irrigation schemes but in the last analysis these water conservation schemes are dependent upon regular stream flow and the minimum of siltation.

Forestry aims to protect existing forests from the ravages of fire, insect, fungus and destructive agencies generally; to improve the quality and condition of forests by carrying out judicious fellings; to control exploitation so that the forest increment and not the forest capital is removed; to regenerate cut over areas; to afforest with native or exotic species denuded lands, or those which for protection or other reasons are from a national point of view better under forest than under any other crop.

2. **General Account of Forests and Timbers.**—Compared with Australia's land area of approximately three million square miles, the area of forest land capable of producing commercial timber has always been very small, occupying in the main the wetter belts of the coastal areas and the near coastal highlands. In the early days of settlement the forests, however, appeared to the small population to be practically inexhaustible. In those early days timbers were exploited chiefly on account of their accessibility, ease of working and general utility regardless of their intrinsic merits, and so it was that what are now regarded as superlative furniture and cabinet timbers were often put to quite inferior

* A specially contributed article dealing with Forestry in Australia appeared as part of this chapter in Official Year Book No. 19 (see pp. 701-12 therein). See also "The Commercial Timbers of Australia, Their Properties and Uses" by I. H. Boas, published by the Council for Scientific and Industrial Research in 1947, "Timbers and Forest Products of Queensland" by E. H. S. Swain, published in 1928 and "Australian Standard Nomenclature of Australian Timbers" published by the Standards Association of Australia.

uses. Clearing of forest land by axe and fire stick to make room for crops and pastures has bitten deeply into the original forest estate which has been further degraded by recurrent forest fires. In retrospect, the damage and waste of the past is appalling, but it marked a phase of forest and timber loss which has been paralleled in the vigorous pioneering activity of the early history of many countries.

Predominantly the forests of Australia consist of relatively coarse bluish green foliated evergreen hardwoods. The characteristic genus is *Eucalyptus*, embracing five to six hundred species, which with few exceptions are endemic to Australia. The genus includes such species as the white mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, both of which for height and grandeur have few equals in the world. At the other end of the scale of size of species of this genus are dwarf types, including the small multiple stemmed species collectively known as the "mallees", which thrive in some of the drier belts. Probably not more than 80 to 90 of the eucalypts are used for sawmilling in Australia and, for one reason or another, not more than 30 to 40 are extensively exploited.

Among these outstanding eucalypts are—

- Blackbutt (*E. pilularis*) of New South Wales and Queensland ;
- Tallowwood (*E. microcorys*) of New South Wales and Queensland ;
- Spotted Gum (*E. maculata*) of New South Wales and Queensland ;
- Ironbarks (*E. spp.*) of New South Wales, Victoria and Queensland ;
- Alpine Ash (*E. gigantea*) of New South Wales, Victoria and Tasmania ;
- Redgum (*E. camaldulensis*) of New South Wales, Victoria and South Australia ;
- Mountain Ash (*E. regnans*) of Victoria and Tasmania ;
- Messmate, Stringybark or Tasmanian Oak (*E. Obliqua*) of New South Wales, Victoria and Tasmania ;
- Jarrah (*E. marginata*) of Western Australia ;
- Karri (*E. diversicolor*) of Western Australia.

The range and properties of eucalypt timbers are very great indeed. They fulfil all Australia's requirements where strength and durability are required, for example in such uses as railway sleepers, poles, piles, beams, girders, telegraph crossarms, waggon scantlings, posts, house blocks, wheelwright timber as well as for fuel, etc. In large measure they also meet general building requirements and, to a lesser extent perhaps, export packaging requirements. In recent years certain of the eucalypts have been extensively pulped for paper-making and, less widely, for the manufacture of hardboard.

A large number of other genera represented in the Australian forest flora also produce commercial hardwoods. Among the outstanding furniture cabinet and veneer timbers are red cedar (*Cedrela toona* Var. *Australis*), Queensland maple (*Flindersia brayleyana*), Southern and Northern silky oak (*Grevillea robusta* and *Cardwellia sublimis*, respectively), Queensland walnut (*Endiandra palmerstoni*), blackwood (*Acacia melanoxylon*), rose mahogany (*Dysoxylum fraserianum*), etc. Turpentine (*Syncarpia laurifolia*) ranks with the world's best as a harbour piling timber and swamp box (*Tristania suaveolens*) is almost as good. Coachwood (*Ceratopetalum apetalum*) came into prominence for rifle furniture and for aircraft ply during the last war. The foregoing are but a few examples indicating the range of use of the timbers of the Australian hardwood forests.

Indigenous softwood resources have never been large and are now seriously depleted. A remnant only remains of the forests of hoop pine (*Araucaria cunninghamii*), bunya pine (*Araucaria bidwillii*) of New South Wales and Queensland, kauri (*Agathis spp.*) of Queensland, and huon pine (*Dacrydium franklinii*), celerytop pine (*Phyllocladus rhomboidalis*) and King William pine (*Athrotaxis selaginoides*) of Tasmania.

There are still considerable areas of the slow-growing but useful white ant resisting cypress (*Callitris spp.*) in the forests of the inland areas of Queensland, New South Wales and Victoria, but many of them are being overcut and in some localities regeneration of the forests presents difficulties.

The savannah forests of the interior yield minor products such as sandalwood and tan barks, and the leaves of some of the mallees are used for oil distillation.

3. *Extent of Forests.*—According to data submitted by State Forestry authorities for the Empire Forestry Conference in 1947, the total area of forest is 119,402 square miles, or about 4 per cent. of the total land area of Australia. This forest area is distributed between the different States as follows :—

	Square miles.	
New South Wales and Australian Capital Territory ..	19,364	
Victoria	27,025	
Queensland	27,050	
South Australia	(a) 5,909	
Western Australia	27,154	
Tasmania	12,900	
Total	119,402	

(a) Excludes 4,600 square miles of mallee containing firewood only.

The South Australian authorities especially emphasize that, after excluding the mallee firewood areas, the percentage of the remaining forest comparable with even mediocre forest land in other States is so small as to be almost negligible. Apart from this specific case it seems clear that there is considerable variation in the standards adopted for the definition of forest land. Also it should be emphasized that the figures given are stated to be rough estimates only. Furthermore, it is generally agreed that the figures for forest areas given are often far in excess of those which are both suitable for reservation and likely to be maintained for timber production. Considering these facts the percentage of Australia carrying commercial forests is very low. On the other hand it should be noted that approximately 68 per cent. of the area of the continent is practically uninhabited and carries less than one person in every eight square miles.

The table below shows a classification of the estimated total forest area referred to above :—

CLASSIFICATION OF FOREST AREA : AUSTRALIA.

(Square miles.)

Class of Forest.				Total.	
				Area.	Percentage of Total Forest Area.
Exploitable—					
Softwood	3,858	16	1,832	5,706	4.8
Mixed wood	1,033	..	94	1,127	0.9
Hardwood	32,016	780	13,146	45,942	38.4
Total	36,907	796	15,072	52,775	44.1
Potentially Exploitable—					
Softwood	200	..	278	478	0.4
Mixed wood	100	100	0.1
Hardwood	16,853	141	7,848	24,842	20.9
Total	17,153	141	8,126	25,420	21.4
Other Land Classed as Forest					
	34,798	..	6,409	41,207	34.5
Grand Total	88,858	937	29,607	119,402	..
Percentage of Total Forest Area					
	74.3	0.8	24.9	..	100.0

The bulk of the softwood forest areas of approximately 4,000 square miles are in Queensland and New South Wales. The softwood forest areas given for these States represent natural forest, a large proportion of which consists of slow-growing native cypress (*Callitris spp.*) in low rainfall areas, and the per acre volume of which is comparatively low.

4. **Forest Reservations.**—The rate at which the original forest estate was being diminished had exercised the minds of far-sighted individuals as long ago as the eighties of last century and it was about that time that the first large forest reservations were made. Over the years recognition that forest reservations were inadequate became more general. It was not, however, until an Interstate Forestry Conference was held at Hobart in 1920 that a specific target to be aimed at was mentioned. The figure then agreed upon was an area of $24\frac{1}{2}$ million acres of indigenous forest, which it was considered should be permanently reserved to meet the future requirements of Australia.

The forest reservations in Australia at 30th June, 1948 totalled 26,403,762 acres of which 19,437,384 acres are described as Dedicated State Forests and 6,966,378 acres as Timber and Fuel Reserves. The distribution of these areas is shown by States in § 4. 2 hereafter.

In general the timber and fuel reserves are temporary only and are liable to be alienated after the timber on them has been exploited. Some of these areas contain land of high value for forestry purposes, but the greater part does not justify permanent reservation.

If the permanently reserved areas were all of good quality, accessible, and fully productive forests supplying the class of timber required, they could be regarded as adequate for a much larger population than exists in Australia at the present time. Actually, however, a considerable proportion is in inaccessible mountainous country and many of the forests contain a mixture of species, some only of which are at present of commercial value: a good proportion consists of inferior forest and a large proportion of the whole has been seriously degraded by recurrent fires. Also the indigenous forest does not contain adequate supplies of softwoods producing commercial timbers of which our needs have to be largely met by softwood timber imported from other countries.

It is freely acknowledged by Australian forestry authorities that information on forest resources is very imperfect. It is not possible at present to give a reliable estimate of the forest areas needed to meet all future demands because of the number of unknown variables involved; in particular the yield capacity per acre, future per capita consumption of different classes of timber, and the future population. It would appear, however, that all available potentially good forest country, including adequate areas for plantations of conifers, will need to be reserved, protected and systematically managed, if Australia is to approach the goal of self sufficiency in timber supplies in the future. One of the most urgent requirements in this connexion is a comprehensive, if provisional, estimate of forest resources.

5. **Plantations.**—The inadequacy of indigenous softwood supplies has been referred to. This fact has long been recognized by the various forest authorities and considerable progress has been made in experimental planting of exotic conifers and also some substantial progress made in the establishment of commercial plantations. It was natural that this aspect of forestry received earliest attention in South Australia as it is the State most poorly endowed with natural forest and it now has the largest plantation area. For some years South Australia has been exploiting considerable quantities of timber from its plantations and these quantities will increase very substantially during the next decade.

According to statements provided by State authorities, the total effective area of plantations in Australia as at the 30th June, 1948 was 265,356 acres. Details by States are given under § 4. 3.

§ 2. Forestry Activities of the Commonwealth.

1. **General.**—When the Commonwealth of Australia was established on the 1st January, 1901, forestry was not included among the matters transferred from the States to the control of the Commonwealth, and Federal jurisdiction was therefore restricted to the then relatively unimportant forests of the Australian Territories. After the 1914-18 War these Territories (including Papua-New Guinea and Norfolk Island) covered a large area, and in the aggregate contained a substantial forest resource. In the early twenties of this century a professional forester was appointed as forestry adviser to the Commonwealth Government, and he submitted preliminary reports on the forest resources of Papua-New Guinea, Norfolk Island and the Australian Capital Territory, with suggestions for future policy.

2. **Commonwealth Forestry Bureau.**—In 1925 the Commonwealth Forestry Bureau was instituted and the Commonwealth Forestry Adviser became the Inspector-General of Forests. At this stage it was considered that the most useful contribution that the Commonwealth could make to Australian forestry was: (a) to provide better facilities than then existed for the higher training in forestry for recruits to the professional ranks of the State services and for forestry research workers; and (b) to initiate research into problems connected with silviculture, forest management and forest protection, which fundamentally were common to most, if not all of the States.

By deciding to build, equip and staff the Australian Forestry School on its own Territory the Commonwealth Government ended a long standing controversy as to the site of a National School which successive Interstate Forestry Conferences had unanimously resolved was necessary. All States sent students to the Australian Forestry School when its career commenced in Adelaide in 1926, pending completion of the school in Canberra in the following year. At this time also a nucleus of selected and qualified officers was sent abroad to undergo special courses of instruction and to obtain experience for the purpose of staffing the research side of the Bureau, which received statutory powers by an Act passed in 1930. These powers and functions, subject to the regulations and the direction of the Minister, were as follows:—(a) advising the Administrations of the Territories on all matters pertaining to the management of forests; (b) the management of forests placed under its control by the Governor-General; (c) the establishment of experimental stations for the study of silviculture, forest management and forest protection; (d) the provision of educational facilities for the training of professional foresters; (e) the establishment and awarding of forestry scholarships; (f) the collection and distribution of forestry information; (g) the publication of reports and bulletins dealing with forestry; and (h) such other functions as are prescribed.

3. **Wartime Control of Timber.**—Because of its importance to the war effort of Australia, the supply of timber immediately on the outbreak of war in 1939 came under the control of the Commonwealth Department of Munitions. With the increasing importance of timber as a raw material in the production of munitions and for defence, a Controller of Timber was appointed in April, 1941 to plan and co-ordinate the supply of timber. Under an order of 8th October, 1941, the Controller of Timber was given power to prohibit the cutting of timber, to determine the priority of orders and to collect returns from persons dealing with timber.

On 23rd March, 1942, these powers were extended by the National Security (Timber Control) Regulations to cover all phases in the production, treatment and use of timber. From time to time orders were issued restricting the use of certain timbers.

4. **Forestry and Timber Bureau.**—(i) *General.* At the end of the war the war-time organization of Commonwealth Timber Control lapsed and the direction of timber supplies within the boundaries of each State became the responsibility of the respective State Governments. The Commonwealth Government decided, however, to continue certain advisory functions previously carried out by War-time Timber Control and such functions were incorporated in the Forestry and Timber Bureau Act 1946 under which the title of the Bureau was altered from Forestry Bureau to Forestry and Timber Bureau, its administration was placed under the charge of a Director-General in lieu of an Inspector-General of Forests, and the powers and functions of the Bureau were extended to embrace

the following :—(a) Collecting statistics and information regarding timber supplies and requirements in Australia, and formulating programmes in respect of the supply, production and distribution of timber in Australia, and the importation into, and exportation from, Australia of timber; (b) advising the Government of the Commonwealth or any instrumentality of that Government, or, when so requested, the Government of any State, or any instrumentality of the Government of any State, or any body or person, on matters relating to the supply, production and distribution of timber in Australia, and the importation into, and exportation from, Australia of timber; and (c) carrying out investigations and research relating to the supply, production, distribution and use of timber. The activities of the Bureau under its statutory functions are summarized below under four main headings.

(ii) *Forestry Education—Australian Forestry School.* The genesis of the Australian Forestry School situated in Canberra in the Australian Capital Territory, which was established by the Commonwealth Government primarily to meet the demand of the States for an institution which would give professional training at least equal to that given by the recognized Forestry Schools abroad, has been referred to in (2) above.

For enrolment at the School a student must possess (a) a satisfactory degree of a University; or (b) a certificate from a University that he has satisfactorily completed the two years' pre-requisite course together with a certificate from an approved Forest Authority that he has satisfactorily carried out a minimum of twelve weeks' practical forest work.

Students may enter the School (a) as nominees of a State or Commonwealth Forestry Service, (b) by the award of a scholarship issued by the Commonwealth Government, (c) as assisted students under the Commonwealth Rehabilitation Scheme for ex-service-men, or (d) as "free lance" students meeting the prescribed school fees themselves.

Ten Forestry Scholarships are made available each year by the Commonwealth Government for award to selected students. The scholarships are tenable at an Australian University for the whole or part of the pre-requisite two years' course leading to the diploma course at the Australian Forestry School and/or the diploma course at the School. The scholarships are valued at £150 per annum for the first two years while attending a University and £175 per annum during the two years at the Australian Forestry School.

A Board of Higher Forestry Education was established in 1944 under the Forestry Bureau Act 1944. Membership of the Board comprises the Director-General of the Bureau and one representative of each of the State Forest Services and Universities respectively. The powers and functions of the Board are generally to advise regarding the maintenance of the standard of the diploma course of the Australian Forestry School and matters associated therewith including the staff required for lecturing and instructional purposes, and regarding the pre-requisite University courses leading to the diploma course of the School.

Students who have passed the approved two-year preliminary science course at the Universities of Adelaide, Melbourne, Western Australia, Queensland, Sydney or Tasmania and two years of Diploma course at the School, may be granted the degree B.Sc.F. by their Universities, subject to certain conditions laid down, particulars of which may be obtained from the Registrar of the University concerned.

For various reasons the number of students attending the School each year almost since its inception has been well below the number which events have since shown were necessary to meet the demand for trained personnel. This position was naturally aggravated during the six years of war, while demands for timber and the need for expansion in all phases of forest developmental work, better protection, transport and more intensive management, have accentuated the shortage of trained staffs. The attendance at the Australian Forestry School has consequently increased substantially to nearly 50 students during 1948. It is anticipated that during the next few years the annual attendance at the School will be between 70 and 80 students. In order to meet the future requirements of professional foresters in Australia, it has been estimated that the annual attendance at the School for some years to come should be at least 40 to 50 students.

(iii) *Silvicultural Research.* Although a considerable amount of research work had been carried out by the Forest Services of the States, it was recognized that there existed a wide field of research in problems of the living tree and the forest crop which could be most usefully undertaken by the Commonwealth.

The Bureau was accordingly charged with the responsibility of initiating research into problems connected with silviculture, forest management and forest protection. However, the financial situation in the years immediately following the constitution of the Bureau delayed development in these activities, but some progress was made by the establishment of a small Central Research Station at Canberra. Experimental forest research stations were also established at Mt. Burr in the South-east of South Australia and in Tasmania on a co-operative basis with the Forest Services of those States.

The impact of the 1939-45 War further retarded progress and resulted in the temporary closure of the Tasmanian station which had been established at Launceston.

With its present limited staff, the research work of the Bureau has been concentrated largely upon studies of forest and climatic conditions, the genetical relationships and silvicultural requirements of various species, forest nutrition and the improvement of forest yields.

A considerable expansion in the research activities is envisaged over the next few years as suitable trained staff becomes available.

The activities of the Central Research Station will be expanded and in addition to the re-opening of the Experimental Forest Research Station at Launceston, it is proposed to extend the field of this class of work by the establishment of further Research Stations in other States and Papua-New Guinea, in co-operation with the respective Forest Services.

(iv) *Timber Supply.* The value of reliable statistical data covering availability of timber and timber requirements was so forcibly demonstrated during the recent war that it was considered essential to maintain at least a skeleton organization against times of future national emergency. Apart from this it became clear that for many years to come shortages of timber on the one hand and heavy post-war reconstruction demands on the other, accentuated by a rapidly increasing population, necessitated assessment of requirements and availability of supplies being kept constantly under review as a basis for short and long term policies of timber supply and distribution.

Advice is currently provided to Government Departments and the trade in matters pertaining to timber supply, including—(a) the availability of total quantities and quantities of particular grades and specifications required to meet Australia's housing and other constructional projects; (b) the quantity of timber that should be imported to assist in meeting such requirements; (c) the extent to which exports of timber and related products might be allowed without detriment to local needs in order to maintain overseas markets; and (d) distribution of timber within Australia from those States having surplus production to those with insufficient production.

A commencement has been made on investigations into timber requirements of the many industries dependent on timber, and it is hoped that this work will be further extended as suitable staff becomes available.

(v) *Research and Investigation regarding Forest Resources.* Production of timber from native grown species has considerably increased since 1939 in order to assist in meeting the heavy demands, firstly for war purposes, and more latterly for building and other constructional projects of the post-war era.

The extent to which the present rate of production can be continued is dependent upon our forest resources. In the national interests it is essential that overcutting of our forests should be avoided and in consequence it is a matter of primary importance that reliable information be available as to the country's forest resources and potentialities. To this end a national forest stocktaking is being carried out by the Bureau in co-operation with the Forest Services of the States and, to assist in the work of forest assessment, special consideration is being given to the development of the use of aerial surveys.

Consideration is also being given, in co-operation with the State Forest Services, to the establishment of increased areas of plantations of exotic pines with a view to providing additional supplies of softwood timber to meet requirements.

5. **Commercial Forests.**—The forest areas under Commonwealth control include the following :—

- (a) *Australian Capital Territory.* The forests of the Australian Capital Territory are administered by a special section of the Australian Capital Territory Administration under the Department of the Interior. Further information is contained in Chapter X.—The Territories of Australia.
- (b) *Northern Territory.* The forests of the Northern Territory are administered by the Administrator of that Territory under ordinance. The native forests of the Territory are very limited, consisting only of a limited area of rain forest in the North, patches of cypress pine, river fringing forests of paper bark, titree and savannah woodland. A Forestry Officer has recently been appointed to the Territory and efforts are to be made to protect and extend the forests.
- (c) *Norfolk Island.* The forests of Norfolk Island are administered by the Administrator of that Territory. The area reserved for forest covers 1,037 acres, of which the main species is Norfolk Island pine.
- (d) *Papua-New Guinea.* The forests are under the control of a Forestry Department and administered under ordinance of the Territorial Administration. Forestry in the Territory of Papua-New Guinea commenced with the appointment of two Forestry Officers to the Administration of New Guinea in 1938. However, the invasion of the Territory by the Japanese in 1942 resulted in the loss of all records and quantitative information regarding the forests of the Territory is largely lacking. Further information is contained in Chapter X.—The Territories of Australia.

6. **Forest Products Research.**—Fundamental investigations connected with the properties and uses of timber and forest products generally are carried out by the Forest Products Division of the Commonwealth Scientific and Industrial Research Organization. These investigations cover a very wide field, e.g., pulp, paper, seasoning, structure and chemistry of wood, tans, etc.

Details can be obtained from the annual reports and publications of the Division.

§ 3. Forest Congresses.

Reference to the various forestry conferences held in Australia and elsewhere is given in Official Year Book No. 22, page 742. The first British Empire Forestry Conference was held in London in 1920. Subsequent conferences were held in Ottawa in 1923, Australia, 1928 and South Africa, 1935, but the Fifth Conference which was to have been held in India in 1940 was postponed because of the war. The Fifth Conference was eventually held in London in 1947, at which statements were presented on a more uniform basis than formerly by the various forest authorities of the British Commonwealth of Nations. These statements included references to the part played by forestry in the different parts of the Empire in the war effort. Publications issued in connexion with these conferences are available on application to the various State and Commonwealth forestry authorities.

The first session of the Food and Agriculture Organization of the United Nations held at Quebec in 1945 drew attention to the need for statistics on forest resources and the supply of, and demand for, forest products; sound forest policies; sound forest management; afforestation; forest research; forest education; integration of forest industries and avoidance of waste; and forest products research, particularly in the direction of extending utilization to little known woods.

At the second session held at Copenhagen in 1946, the Director-General of the Forestry and Timber Bureau attended the conference as alternate delegate and adviser in forestry matters for the Commonwealth.

§ 4. State Forestry Departments.

1. **Functions.**—With the exception of Queensland, the powers and functions of State forest authorities are laid down under Forestry Acts and Regulations. In each State there is a department or commission to control forestry work. The functions of these administrations are as follows :—(a) The securing of an adequate reservation of

forest lands ; (b) the introduction of proper measures for scientific control and management of forest lands ; (c) the protection of forests ; (d) the conversion, marketing and economic utilization of forest produce ; and (e) the establishment and maintenance of coniferous forests to remedy existing deficiency in softwoods.

In Queensland, forestry is a sub-department of the Department of Public Lands.

Annual reports are issued by each State forest authority ; that for Queensland being included with the report issued by the Department of Public Lands.

In Victoria a forestry school has been established at which recruits are trained for the forestry service of the State.

2. **Forest Reservations.**—As mentioned in § 1. 4 *ante*, State forest authorities agreed that, in order to secure Australia's future requirements, an area of $24\frac{1}{2}$ million acres should be permanently reserved. In June, 1948 the area of State forests reserved in perpetuity totalled 19,437,384 acres or 79 per cent. of the area recommended as the goal to be attained.

In addition to the work of permanently reserving areas in each State, foresters are endeavouring to survey all timbered lands with a view to the elimination of those unsuitable for forestry. Considerable areas have been revoked in certain States, while dedications of new areas have resulted in gains to the permanent forest estate.

The Forestry Departments also control 6,966,378 acres recorded as temporary timber and fuel reserves, but, while these areas contain some land of high value for forestry purposes, the greater part does not justify permanent reservation.

In the following table details of forest areas as recorded by State Forest Authorities, distinguishing between Dedicated State Forests and Timber and Fuel Reserves, are given for each State as at 30th June, 1948.

AREA OF FOREST RESERVATIONS, 30th JUNE, 1948.
(Acres.)

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
Dedicated State Forests ..	5,350,638	4,939,493	3,777,913	(a) 252,320	3,399,799	1,717,221	19,437,384
Timber and Fuel Reserves ..	1,297,660	(b)	3,140,272	..	2,150,302	(c) 378,144	66,966,378
Total ..	6,648,298	4,939,493	6,918,185	252,320	5,550,101	2,095,365	26,403,762

(a) Includes Timber and Fuel Reserves.
(d) Incomplete.

(b) Not available.

(c) Excludes Fuel Reserves.

3. **Reforestation, Afforestation, etc.**—In the table below details are given of the area of indigenous forest improved or regenerated, the area of forest plantations and the number of persons employed by Forestry Departments for the year 1947-48.

FORESTRY : AREAS, AND NUMBERS EMPLOYED BY FORESTRY DEPARTMENTS,
1947-48.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
Total area of indigenous forest improved or regenerated .. acres	1,468,741	1,071,691	485,153	9,928	527,357	(a)	3,562,870
Total area of effective plantations—

totalling 34.

(b) Includes 173 acres of nurseries.

(d) Includes 257 other employees.

(c) Includes Wood Technology staff
(e) Includes 227 other employees.

4. **Revenue and Expenditure.**—The revenue and expenditure of State Forestry Departments for the years 1938-39 and 1943-44 to 1947-48 are shown below.

In New South Wales, Victoria and Tasmania, expenditure has exceeded revenue in each of the years shown. The excess of income over expenditure recorded annually since 1941-42 in South Australia indicates the successful development of the afforestation policy adopted in a State which is less endowed in natural forest resources than any of the other States. In Queensland, where surpluses were recorded previously, deficits occurred in 1946-47 and 1947-48, whilst in Western Australia in each of those years, the income received was greater than the amount expended.

§ 5. Forestry Production.

1. **Timber.** Particulars of logs treated and the production of rough sawn timber by sawmills and other woodworking establishments are shown by States in the following table for the year 1947-48. The information published in the corresponding table of issues prior to No. 37 was restricted to establishments classified as Forest Sawmills. In order not to omit the output of other mills not included under this classification, the table has been amended to include all mills as described above.

OUTPUT OF NATIVE TIMBER : ALL MILLS, 1947-48.

(a) Not available for publication ; included with softwoods.

The next table shows the sawn output of native timber in sawmills and other wood-working establishments in each State for the years 1938-39 and 1943-44 to 1947-48.

SAWN OUTPUT (a) OF NATIVE TIMBER : ALL MILLS.

('000 sup. feet.)

State.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
New South Wales ..	179,350	259,035	245,975	252,108	300,945	332,591
Victoria ..	120,197	176,464	173,619	212,611	253,266	260,502
Queensland ..	193,250	204,201	194,138	189,912	219,745	235,214
South Australia ..	14,537	35,684	38,418	37,113	46,479	47,700
Western Australia ..	125,453	109,987	106,029	107,647	124,198	131,597
Tasmania ..	84,228	80,897	83,775	90,579	102,449	109,709
Total ..	717,015	866,268	841,954	889,970	1,047,082	1,117,313

(a) Includes the sawn equivalent of timber peeled or sliced for plywood and veneers.

In addition to the sawn timber shown in the preceding table, a large amount of other timber, e.g., sleepers, piles, poles, fencing material, timber used in mining, and fuel, is obtained from forest and other lands. Complete information in regard to the volume of this output is, however, not available. In Western Australia particulars are obtained of the quantities of timber hewn by contractors for the Railway Department, mines, etc., as well as of the quantities produced by other agencies, but the figures have not been included in the preceding tables. The quantities so produced in Western Australia in the five years shown in the preceding table were as follows :—1938-39, 35,862,540 sup. feet. ; 1943-44, 11,698,704 sup. feet ; 1944-45, 10,216,392 sup. feet ; 1945-46, 10,348,458 sup. feet ; 1946-47, 15,604,008 sup. feet ; and 1947-48, 17,210,844 sup. feet. The annual reports of the Forest Departments of the States contain particulars of the output of timber from areas under departmental control, but owing to lack of uniformity in classification and measurement, accurate determination of total production cannot be made. Moreover, there is a moderate quantity of hewn timber produced from privately owned land, but information regarding output is not available.

2. Paper and Wood Pulp.—(i) *Tasmania*. The manufacture of paper from Australian-grown timber has been established in three States. In Tasmania two large mills are making paper from indigenous hardwoods. The first of these started production of paper from imported pulp at Burnie in August, 1938, and so continued until the pulp mill, using local hardwood, came into operation a few months later. At this mill, pulp is produced by the soda process and the caustic soda necessary for cooking the wood and chlorine for bleaching the pulp are produced by a separate plant located alongside the mill. Two paper-machines are operated. The larger machine has the capacity to produce paper 180 inches wide at 800 feet per minute, while the smaller machine is capable of producing paper 90 inches wide at about 400 feet per minute. The paper produced covers a wide range of high class printing, writing, drawing, duplicating and blotting papers. At Boyer on the Derwent River, near Hobart, production of newsprint commenced in February, 1941. The newsprint is manufactured from locally ground wood pulp to which is added a small proportion of sulphite pulp imported from Canada. The paper-making machine installed is capable of making paper 161 inches wide at the rate of 1,200 feet per minute, and when running at full capacity can produce about 540 tons of newsprint per week. At both these mills logs are taken from the forests by means of tractors and transported to the mills by rail. Power is supplied by the Tasmanian Hydro-electric Commission and hardwood not suitable for pulping is used as fuel. During 1948-49, 57,869 cords of pulp wood and 43,734 cords of firewood were delivered to these mills.

(ii) *Victoria.* In Victoria the production of wood pulp for paper-making commenced in January, 1937, with a pilot plant having the capacity of about 3,000 tons of air-dried pulp per annum. In October, 1939 the main plant at Maryvale, with a capacity of 27,000 tons of pulp per annum, commenced operations. Associated with the pulp mill is a paper-making plant capable of producing about 20,000 tons of kraft paper per annum. The timber used at this mill consists mainly of hardwoods at present unsuitable for other purposes. In addition, a small quantity of pine, mainly thinnings, mill waste and special softwood for production of cellulose is used. During 1947-48 the wood taken from Crown Lands for the production of wood pulp and cellulose amounted to 2,930,061 cubic feet of which 2,800,295 cubic feet were hardwoods and 69,766 cubic feet were radiata pine.

(iii) *South Australia.* In South Australia a pulp and paper board mill commenced operations during 1941-42 near Millicent. When completed and in full production the mill will use considerable quantities of softwoods from the Mount Burr and Penola pine plantations. During 1947-48, 16,242,000 super. feet of pulp wood were produced.

3. *Other Forest Products.*—(i) *Veneers, Plywood, Etc.* Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. Recently, however, this has been considerably extended in all States, and much greater use has been made of local-grown timbers, both hard and softwoods. In recent years special attention has been paid to the selection of logs suitable for peeling.

The following table shows the production of plywood and veneers for each of the years 1938-39 and 1943-44 to 1947-48.

PLYWOOD AND VENEER PRODUCED.

Total ..	31,808	45,566	17,788	34,633	66,728	78,250

(ii) *Charcoal*. With the availability of additional petrol supplies towards the end of the 1939-45 War, the production of charcoal, which previously had a wide use as a substitute fuel during the war years, was considerably reduced and is now little higher than normal.

(iii) *Eucalyptus Oil*. Oil may be distilled from the foliage of all varieties of eucalyptus, and several of them furnish a product widely known for its commercial and medicinal uses. Complete information regarding Australian production and consumption of eucalyptus oil is not available, but considerable quantities are manufactured, particularly in Victoria. The value of oversea exports of eucalyptus oil distilled in Australia amounted in 1938-39 to £86,714; in 1943-44 to £124,148; in 1944-45 to £136,297; in 1945-46 to £201,948; in 1946-47 to £408,451; in 1947-48 to £323,800; and in 1948-49 to £138,304. The quantities exported in the years 1946-47 to 1948-49 were 1,680,461 lb., 1,481,318 lb. and 765,195 lb. respectively. The bulk of the product is shipped to the United Kingdom and the United States of America, Victoria being the principal exporting State. Large quantities of the crude oil are used locally in flotation processes in connexion with the recovery of gold and other minerals.

(iv) *Sandalwood and Sandalwood Oil*. Most of the sandalwood is produced in Western Australia where considerable quantities are gathered each year for export to Asiatic countries. Small quantities are also produced in South Australia, Queensland and New South Wales. Details of exports of sandalwood are shown in paragraph 3 (ii), § 6. Oil distilled from Western Australian sandalwood has a medicinal value and is used extensively in the manufacture of perfumes. Quantities of this oil are exported annually to the eastern States of Australia and oversea countries, principally the United Kingdom. Oversea exports of Australian sandalwood oil amounted in 1938-39 to £13,964; in 1944-45 to £11,390; in 1945-46 to £19,560; in 1946-47 to £59,145; and in 1947-48 to £38,327.

(v) *Grass Tree or Yacca Gum*. South Australia is the chief State producing this gum, which is used in the preparation of varnishes and lacquers. Quantities are also obtained in New South Wales and Western Australia but these are small. The production in South Australia during 1947-48 amounted to 1,120 tons, whilst the exports from Australia amounted to 798 tons valued at £12,314.

(vi) *Tan Barks*. The forests of Australia are capable of yielding a wealth of tanning materials; many species of eucalyptus and other genera contain varying proportions of tannin, chiefly in the bark, but also in the wood and twigs. Although many of these species contain higher percentages of tannin than are found in the barks of oak, chestnut and hemlock, formerly the chief source of tannin material in the northern hemisphere, scattered distribution has resulted in the richest tan-bearing species only being used in Australia. These are:—Golden wattle (*Acacia pycnantha*), black or green wattle (*Acacia decurrens* or *mollissima*), and mallet (*Eucalyptus astrigens*).

Up to 1913 the production of wattle bark was more than sufficient for local requirements, and an export trade was built up. The supply diminished during the six years ended 1926-27, and Australia imported on the average about 2,900 tons each year from Natal, where the plantations were originally started from Australian seed. From 1927-28 to 1938-39 exports exceeded imports in every year except 1936-37, but since 1939-40 there has been a considerable excess of imports. The chief exporting States are Western Australia, South Australia and Tasmania. This matter is referred to in tables appearing in § 6 following. The other valuable tan bark, mallet (*Eucalyptus astrigens*) of Western Australia, is not extensively used in Australian tanneries, but it is exported to Europe and other countries, where it is used for producing a tannin

extract. A brief account of work done by the Council for Scientific and Industrial Research in connexion with tanning materials is given in Official Year Book No. 22, p. 743. The production of extract from the bark of karri (*Eucalyptus diversicolor*), of which very large quantities are available at karri sawmills, has passed the experimental stage, and private enterprise has started production on a commercial scale. The experimental work in kino impregnated marri (*Eucalyptis calophylla*) bark is not yet complete. The production of tan bark in Australia approximated 25,000 tons per annum in the years prior to 1939. Since then production has declined and in 1945-46 reached the level of about 8,800 tons recovering to about 11,000 tons in 1946-47 and 1947-48. However, this diminution is offset by the increased use of vegetable tanning extract which rose from 3,686 tons in 1938-39 to 11,792 tons in 1947-48.

4. Value of Production—Gross and Net.—(i) *General.* The values of forestry production on a gross, local and net basis are shown in the following table for the years 1946-47 and 1947-48.

GROSS, LOCAL AND NET VALUE OF FORESTRY PRODUCTION.

5. *Employment.*—(i) *Forestry Operations.* The estimated number of persons engaged in forestry operations as at June, 1948 is shown in the following table. These estimates, which have been based upon pay-roll tax and other data, include working proprietors but exclude those engaged in the sawmilling industry whose particulars are given in the next table.

ESTIMATED NUMBERS ENGAGED IN FORESTRY, JUNE, 1948.

(Excluding Sawmilling Industry).

Sex.	N.S.W. (a)	Victoria.	Q'land.	S. Aust. (b)	W. Aust.	Tasmania.	Total.
Males ..	9,011	7,027	5,684	1,373	1,640	1,965	26,700
Females ..	13	14	5	16	10	4	62
Total ..	9,024	7,041	5,689	1,389	1,650	1,969	26,762

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

(ii) *Milling Operations.* Details of the number engaged, including working proprietors, in the milling operations of sawmills are given in the next table. Further details regarding the operations of these mills are given in Chapter XXIV.—“Manufacturing Industry”.

SAWMILLS : NUMBER ENGAGED, 1947-48.

(a) Excludes Northern Territory and Australian Capital Territory.

§ 6. Oversea Trade.

1. Imports.—(i) *Dressed Timber*. The quantities and values of timber imported into Australia during the years 1938-39 and 1945-46 to 1947-48 inclusive are shown in the following table according to countries of origin :—

DRESSED TIMBER : IMPORTS INTO AUSTRALIA.

Country of Origin.	Quantity ('000 sup. feet.)				Value (£).			
	1938-39.	1945-46.	1946-47.	1947-48.	1938-39.	1945-46.	1946-47.	1947-48.
United Kingdom ..	1	2	44	1	..	425
Canada	8,927	7,950	2,038	3,297	90,833	197,688	65,604	137,916
New Zealand	555	313	10	..	23,516	14,589	367
Other British Countries ..	3	..	1	145	21	5,746
Norway	4,209	..	43	2,094	43,297	..	1,106	90,924
Sweden	1,978	..	1,534	5,075	24,290	..	55,562	220,817
U.S. of America ..	2,242	2,179	1,153	2,245	22,029	74,349	61,253	122,060
Other Foreign Countries ..	418	103	6,163	4,057
Total	17,778	10,684	5,082	12,971	186,677	295,554	198,114	582,312

The figures in the table above exclude items such as architraves, veneers, plywood, staves, etc., quantities for which are either not shown, or are expressed in dissimilar units in the Customs entries. The total value of the items so excluded amounted to £119,271 in 1947-48.

The bulk of the imports of dressed timber comes from Canada, New Zealand, Norway, Sweden and the United States of America. Practically the whole of this timber consists of softwoods used for lining, weatherboards, flooring, shelving, doors, etc.

(ii) *Undressed Timber*. Australian imports of undressed timber for the years 1938-39 and 1945-46 to 1947-48 are shown hereunder :—

UNDRESSED TIMBER (a) : IMPORTS INTO AUSTRALIA.

Country of Origin.	Quantity ('000 sup. ft.).				Value (£).			
	1938-39.	1945-46.	1946-47.	1947-48.	1938-39.	1945-46.	1946-47.	1947-48.

Malaya (British) ..	165	..	41	312	1,264	..	1,595	6,311
New Zealand	11,193	5,037	7,199	13,956	157,967	98,544	123,772	342,614
Other British Countries ..	10,840	1,097	3,269	10,422	68,387	2,714	68,170	206,274
Japan	374	7,681
Netherlands East Indies ..	20	257	118	1,584
New Caledonia	1,671	6	5,796	17	..	55
Philippine Islands ..	6,879	3	..	2	66,371	35	..	34
Sweden	4,654	..	1,014	3,168	36,946	..	33,189	98,530
United States of America ..	12,245	26,814	22,348	57,735	191,221	432,470	477,104	1,453,104
Other Foreign Countries ..	2,994	81	3	296	27,027	6,372	2,149	29,106
Total	348,098	103,412	121,926	134,405	1,688,324	1,357,993	3,034,057	3,585,152

(a) Excludes timber not measured in super. feet.

By far the larger proportion of the undressed timber imports consists of softwood such as oregon, redwood, hemlock, western red cedar and yellow pine from Canada and the United States of America; kauri, rimu and white pine from New Zealand and other softwoods from Sweden. Amongst the hardwoods imported are mahogany from the United States of America, teak from Burma and other hardwoods from the Pacific Islands.

2. Exports.—(i) *Undressed Timber (excluding Railway Sleepers)*. The quantity and value of undressed timber, exclusive of railway sleepers, exported during the years 1938-39 and 1945-46 to 1947-48 are shown below, together with the countries of destination.

UNDRESSED TIMBER (EXCLUDING RAILWAY SLEEPERS) (a) : EXPORTS FROM AUSTRALIA.

Country to which Exported.	Quantity ('000 sup. ft.).				Value (£).			
	1938-39.	1945-46	1946-47.	1947-48.	1938-39.	1945-46.	1946-47.	1947-48.

Total ..	44,338	12,698	20,179	24,377	594,825	416,742	570,399	874,035

(a) Excludes timber not measured in super. feet.

The bulk of the exports of undressed timber were consigned to New Zealand, the United Kingdom, South Africa and the United States of America, and consisted largely of the Western Australian hardwoods, jarrah and karri, which have earned an excellent reputation for such purposes as harbour works and wood paving, etc. Considerable quantities of pole, pile and girder timber are also exported from New South Wales to New Zealand.

(ii) *Railway Sleepers*. Particulars of the quantities and values of railway sleepers exported, which are excluded from the previous table relating to undressed timber, are shown below.

RAILWAY SLEEPERS : EXPORTS FROM AUSTRALIA.

Country to which Exported.	Quantity ('000 sup. ft.).				Value (£).			
	1938-39.	1945-46.	1946-47.	1947-48.	1938-39	1945-46.	1946-47.	1947-48.

Total	4,313,197	1,563,855	2,749,342

(a) Timber measured in super. feet only.

(b) Not recorded separately.

NOTE.—The minus sign (—) denotes an excess of exports.

(ii) *Sandalwood.* A considerable quantity of sandalwood is exported, principally from Western Australia, to Singapore and Hong Kong, where it is highly prized and largely used for artistic and ceremonial purposes. Particulars for the five years 1943-44 to 1947-48 are compared with 1938-39 in the following table :—

SANDALWOOD : EXPORTS FROM AUSTRALIA.

Country to which Exported.	Quantity (Tons).							Value (£).						
	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

Germany ..	8,251	3,582
Other Foreign Countries ..	2,309	1,170	..	1,124	558	..
Total ..	18,220	..	I	9,673	..	8,630	..	6	13,032	..

For a number of years prior to 1927-28 Australia had to import large quantities of tanning bark, but thereafter imports dropped to negligible quantities and exports rose annually to 89,061 cwt. in 1931-32. Since 1931-32 there has been a diminution of exports and by 1941-42 these had reached the low level of 421 cwt. The quantity imported did not rise appreciably until 1939-40 when imports were more than three times that of the previous year. Since that year there has been a considerable excess of imports, the Union of South Africa being almost the sole source of supply.

A comparison of the imports and exports of tan bark during 1938-39 and the five years ended 1947-48 is given in the following table :—

TAN BARK : IMPORTS AND EXPORTS, AUSTRALIA.

Particulars.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
QUANTITIES—	Cwt.	Cwt.	Cwt.	Cwt.	Cwt.	Cwt.
Imports	6,199	105,315	90,024	86,367	65,056	69,012
Exports	18,220	1	9,673	..
Excess of imports over exports ..	— 12,021	105,315	90,024	86,366	55,383	69,012
VALUES—	£	£	£	£	£	£
Imports	2,318	61,050	54,570	56,986	49,456	64,696
Exports	8,630	6	13,032	..
Excess of imports over exports ..	— 6,312	61,050	54,570	56,980	36,424	64,696

NOTE.—The minus sign (—) denotes an excess of exports.

The imports consist almost exclusively of wattle bark from the plantations in South Africa. One species of Australian wattle, *Acacia mollissima*, is chiefly relied upon for the production of wattle bark in the South African plantations. Seed has been tried from New South Wales, Tasmania and Victoria, but it is stated that most of the seed is obtained from the best wattle bark areas in eastern Tasmania and western Victoria.

Two reasons are given to account for the success of the industry in the Union of South Africa :—(a) It is found that the treeless, grassy highlands of Natal are specially suitable for wattle culture, and the trees can therefore be grown in rows and economically attended to, while the necessary bark sheds and other appurtenances can be placed in the most advantageous positions; and (b) the availability of native labour.

(iv) *Other Tanning Substances.* Considerable quantities of tanning substances other than bark are imported annually into Australia. The total value in Australian currency of the importations in 1947-48 was £472,525, and was composed as follows :—Tanners' Bates, £12,617; wattle bark extract, £401,344; quebracho extract, £660; other extract, £17,863; and volonia, myrobalans, cutch, etc., £40,041.

Exports of tanning extracts from Australia amounted to £212,553 in 1947-48.

CHAPTER XXIII.

FISHERIES.

§ 1. General.

1. **Fish Stocks.**—Australia possesses a varied native fauna of freshwater and marine fish, including tropical and temperate species. In addition, certain exotic species have become acclimatized in the freshwater streams. The commercial fisheries exploit on-shore, demersal (bottom) and pelagic (surface) stocks. The on-shore stocks are at present of greatest importance.

The Australian marine fauna includes also a number of mollusca (oysters, scallops) and crustacea (crabs, prawns, crayfish) groups which are commercially exploited.

At certain times of the year whales of various species appear off the coasts.

2. **Fishing Areas.**—The principal fishing areas at present are the coastal lakes, streams, estuaries and beaches, from Cairns in Queensland to Ceduna in South Australia, and from Esperance to Geraldton in Western Australia. There are interruptions of variable size; for the most part, these fishing grounds are associated with the coastal streams. The demersal grounds fall into two classes—(a) the reefs from which cod and other tropical species are taken in tropical waters, and snapper in temperate waters; and (b) the grounds from which flathead, morwong, etc., are taken. The reefs extend intermittently from northern Queensland around the southern part of the continent to Shark's Bay in Western Australia. The flathead grounds lie on the continental shelf off south-east Australia, chiefly from off Crowdy Head to south of Cape Everard and further off the east Tasmanian coast off Babel Island southwards to Storm Bay. Other demersal grounds are known to exist in the Great Australian Bight but as yet are not exploited. The demersal shark grounds lie principally in Bass Strait and on the continental shelf off eastern South Australia. Other grounds have been located off southern Western Australia.

The grounds of existing pelagic fisheries include that for the Spanish mackerel off the north-eastern coast from about Coff's Harbour to Cairns and that for barracouta in Bass Strait and off eastern Tasmania. Horse mackerel is found in the waters of eastern Tasmania, the south-east coast of New South Wales, and Western Australia. Concentrations of other pelagic groups, including tuna and clupeoid species, are reported over the continental shelf at various points.

The pearl oyster inhabits the northern and western coastal waters from Cape York to Shark Bay. Edible oysters are found in the temperate waters of Queensland, New South Wales and Victoria. Some cropping of natural resources takes place in Queensland but the principal cultivation grounds are found in New South Wales. The scallop is found commercially only in Tasmanian waters.

Crabs of various species are found in practically all coastal waters. Prawns are taken in the temperate waters of Queensland and New South Wales. Crayfish are taken on reefs of the continental shelf in the waters of all southern States, the fishery extending (with a major interruption in the Bight) from Port Macquarie in New South Wales to Geraldton in Western Australia.

The whale appearances occur off the south of the continent, extending as far north as southern Queensland in the east and to beyond Shark's Bay in the west.

3. **Fishing Boats and Equipment.**—The fishing equipment includes almost every possible type of gear, and appropriate boats are employed. The on-shore equipment includes mesh-nets, trawl-nets, and traps of various types. The demersal reef-fishery is worked with traps, hand lines and other long lines. The demersal flathead-fishery

is worked by both otter trawl (with V.-D. gear) and Danish seine; in addition some hand-lining is carried out. The demersal shark fishery is worked by long lines. The pelagic mackerel-fishery employs trolling gear with lures of various types, while the pelagic barracouta fishery employs principally barbless jigs. The Commonwealth Scientific and Industrial Research Organization, Division of Fisheries, experimented with purse-seine nets for tuna and horse-mackerel and with drift nets and lampara nets for pilchards. A number of these nets is now on loan to commercial fishermen in New South Wales, Tasmania and Western Australia.

The boats for the on-shore fisheries are almost invariably small vessels fitted with low-power petrol engines. The vessels working the reefs are larger (up to 50 feet) and have more power. The otter trawl vessels are steam trawlers, while the Danish seine vessels are 40 to 70 feet in length with diesel engines. The shark boats have diesel power and range from 35 to 50 feet in length. For the operation of the purse-seine nets, a larger vessel of 75 feet has been secured by a crew experimenting with a 330 fathom tuna purse-seine in Tasmania and an 80 foot purse-seiner is nearing completion and will be used in South Australian waters.

4. Administration.—The fisheries are administered at present by State Departments implementing State laws. This administration includes licensing of men and boats, and restriction on fishing by prohibitions against fishing at certain times and places and by certain methods. In some States the quantity, type and construction of gear is subject to limitations and legal minimum sizes are prescribed.

In October, 1946 the Commonwealth Government appointed a Director of Fisheries and established a Commonwealth Fisheries Office in the Department of Commerce and Agriculture to co-ordinate fisheries administration. The functions of this office are set out in § 4, par. 3 hereafter and include fishing in extra-territorial waters, whaling, pearling, etc.

The Commonwealth Scientific and Industrial Research Organization, through its Fisheries Division, is responsible for fishery research (*see* § 4, par. 2 hereafter).

§ 2. Development and Present Condition of the Fishery.

1. Fisheries Proper.—(i) *General.* The earliest Australian fishery was on-shore. To this was soon added the demersal reef fishery using lines. At each centre of population this sequence has almost invariably been followed, and expansion of the industry up to about the year 1900 consisted chiefly of the extension of these operations into hitherto unworked areas. The taking of barracouta in Tasmanian waters was begun at least by 1880, if not earlier, but the main development of this fishery occurred between 1915 and 1925.

The first major development of the fishery came with the institution of trawling operations off the New South Wales coast in 1918 by the New South Wales Government, as a consequence of the results obtained from the exploratory work of the Federal Investigation ship *Endeavour*. The State enterprise failed, but the fishery was found very profitable by private enterprise, which had as many as sixteen steam trawlers operating at one time. In 1936 the use of Danish seine vessels began and the fleet of these vessels rapidly expanded, being given an exceptional opportunity by the requisitioning of the steam trawlers by the Navy. Subsequently, practically all the Danish seine vessels were also requisitioned. After the war, vessels requisitioned by the Services were returned to the industry and in 1946 a peak was reached and thirteen steam trawlers and 120 Danish seine vessels were licensed. The total catch of trawled fish in 1946-47 was 16,000,000 lb. However, by the end of 1947 many of these vessels, which had made satisfactory catches in 1946, found that the fish stocks, particularly of flathead, appeared to be seriously depleted. Of the species taken by the trawl fishery, tiger flathead, jackass fish and nannygai are the most important, and of these flathead may be regarded as the prime fish and commands a higher price. Since 1947 the composition of the catch has changed, because of depletion of the flathead stocks, and the lower priced fish have become a larger proportion of the catch. In 1949, twelve steam trawlers and 70 Danish seine vessels were licensed.

In Queensland waters the Spanish mackerel is taken by line fishermen, operating in off-shore waters out to the Barrier Reef between Gladstone and Cairns, with Townsville as the centre. This fishery started in 1930 and by 1942 production had risen to about 1,000,000 lb., but since then the catch has decreased considerably, mainly because the larger vessels then operating in the fishery were commandeered for the Services and smaller vessels have carried on the fishery.

In 1930 the fishery for snapper shark was started in south-eastern waters, particularly off the Victorian and Tasmanian coasts. This fishery extended rapidly its area of operations, particularly in the Bass Strait area and the south-east coast of South Australia, and the catch increased from 23,131 lb. in 1930 to a steady 3,000,000 lb. catch in each year since 1942. Great impetus was given to the fishery during war years by the demand for livers for fish oil production for medicinal purposes. This demand has continued and though the stocks of sharks appear to show signs of depletion, fishermen have been able to maintain the level of production by fishing on new grounds and over a wider area. Livers yield about 1,500 gallons of vitamin oil per annum, and the flesh is sold as "flake" for the most part in the Melbourne Fish Market.

The survey work of the Division of Fisheries of the Commonwealth Scientific and Industrial Research Organization has revealed stocks of various species of pelagic fish. Some of these are now being exploited by commercial fishermen. Tuna of various species are known to occur in Australian waters but, despite extensive surveys, no commercial quantities have yet been taken. Pilchards occur in the southern waters of Australia from Port Stephens to the south-west of Western Australia. Catches have been made by commercial crews using a lampara net and a small purse-seine at Jervis Bay on the New South Wales coast, in Port Phillip Bay in Victoria, at Coffin Bay in South Australia and at Albany in Western Australia. Anchovies in Port Phillip Bay and sprats in Tasmanian waters are caught in payable quantities though there is usually some difficulty in finding a market for them. Horse mackerel have been caught in commercial quantities off the east coast of Tasmania and off Eden in New South Wales. During March and April, 1949, 72 tons were caught in Tasmanian waters.

(ii) *Production.* Production for the year 1947-48 was about 76,000,000 lb., the increase in catch over the previous year being due to the larger catch of Australian salmon in Western Australia and the large catch in Tasmanian waters of barracouta which was canned for oversea export.

The movement in production since 1938-39 is shown by States, in the following table :—

RECORDED PRODUCTION OF FRESH FISH.

('000 lb.)

State.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

(b) Not available.

2. **Oysters and Shell Fisheries.**—Initially the Australian oyster fisheries depended solely upon the harvesting of naturally grown stock in littoral and submarine areas. However, the stocks soon deteriorated and attention was turned to methods of cultivation. These have not been successful in Queensland, but in New South Wales there has been constant improvement in methods and the present technique in certain areas is highly efficient. In New South Wales peak production of 76,912 cwt. was reached in 1938, while production in 1947-48 was 58,693 cwt. The production for Australia in 1947-48 was 64,986 cwt. Scallops are taken by dredge in the D'Entrecasteaux Channel in Tasmania.

Cray fisheries have developed greatly in recent years and the development has been such as to permit an export trade of crayfish tails to America. The catch for 1947-48 was considerably higher than in any previous year, Tasmania, South Australia, and Western Australia being the chief centres of production. Details of the crayfish take are shown in the following table:—

RECORDED PRODUCTION OF CRAYFISH.

(a) Year ended December previous.

3. **Pearl-shell and Bêche-de-mer.**—Before the war pearl shelling was carried out in the tropical waters of Queensland, the Northern Territory, and Western Australia, mainly by Japanese and Malay divers, using diving apparatus, in waters varying from 4 to 20 fathoms in depth. During the war practically all of these operations were discontinued. After the war the policy of the Commonwealth Government was to prohibit indentured labour, but despite this restriction, by 31st December, 1947, there were 28 boats in commission off the Western Australian coast, operated by 267 men. In Queensland, pearling operations are centred at Thursday Island, where, by June, 1948, 93 boats were being operated, the men engaged numbering 966 including Torres Strait Islanders and Australian aboriginals.

Reference to inquiries into the pearl-shell fishing industry by a Royal Commission in 1912 and by the Tariff Board in 1935, appears on page 1031 of Official Year Book No. 37.

§ 3. Marketing and Distribution.

1. **Marketing.**—The greater portion of Australian fish is sold in metropolitan markets. In Queensland, fish marketing is under the control of a Fish Board, which has representatives of producers, wholesalers, consumers, and a Government nominee as chairman. A central market is located in Brisbane and there are branch markets or depots at 15 centres along the coast. The organization ensures that all fish is marketed through the correct channels, and the board has encouraged to a very marked extent the steadily increasing annual fish production of the State. The fish marketing methods in this State have proved most successful. In New South Wales the central market in Sydney

is conducted by the Chief Secretary's Department, and the port depots in various centres along the coast by fishermen's co-operatives. These co-operatives distribute the fish to local centres and to inland country districts, and send any balance of fish they may have to the central market in Sydney. In Victoria, South Australia, and Western Australia fish is sold in central markets by agents. The greater part of the catch of fish in Tasmania is either processed in canneries in that State or exported to the mainland. There is some interstate movement of fish from the northern rivers of New South Wales to Queensland, from Tasmania to New South Wales and Victoria, and from South Australia to Victoria.

2. Consumption of Fish.—Prior to the 1939-45 War, Australians consumed annually the fresh and canned equivalent of about 131,000,000 lb. of round fish, or 19.0 lb. per person. About 70,000,000 lb. was produced locally and the remainder was imported; that is, the average Australian ate about 10.2 lb. of Australian fish a year and the equivalent of 8.8 lb. of overseas fish. During the 1939-45 War, however, the quantity of fish entering civilian consumption in Australia was reduced to approximately 6 lb. (weight in the round) per person annually owing to the decline in local production, the steep drop in the imports of canned fish and the allocation of supplies for the Services and other priority needs. Although fish was in increased demand during the period of meat rationing, it is not, as in many countries, a staple item in the diet of Australia, and is still regarded rather as a luxury. The consumption per head of population during 1947-48 amounted to 5.7 lb. edible weight of fresh fish and 3.5 lb. of canned fish or a total of 16.8 lb. expressed in terms of fish in the round. This represents a total quantity consumed of 128,000,000 lb. in the round of which nearly 80,000,000 lb. was produced locally.

3. Processing, including Canning.—The equipment for handling fish has in the past been rather inadequate, but in most States since the war cold storage facilities have been improved and increased. In Queensland and New South Wales particularly, the depots which have been established at fishing ports have been equipped with cold storage space. In several States there has been a development of establishments equipped for snap freezing of fish, in particular the freezing of crayfish tails for export.

In all States there has been a development of facilities for light processing of fish, particularly for smoking.

The output of canneries rose from 3,717,248 lb. in 1946-47 to 9,731,702 lb. in 1947-48, representing an increase of over 260 per cent. Preliminary totals for 1948-49 indicate a further increase in production to about 10,500,000 lb. The quantities of locally-produced canned fish (excluding shell-fish) exported amounted to 883,409 lb. in 1946-47 and 916,199 lb. in 1947-48.

The number of canneries operating in Australia during 1948-49 totalled eighteen. Of these, eight were situated in Tasmania, four in New South Wales and Western Australia and one in South Australia and Victoria. These, however, do not include two factories engaged in the production of fish paste.

4. By-Products.—Processing of offal for fish-meals, etc., has been established in certain States. The processing of livers for vitamin-rich oils has been undertaken in several States and oil-production has been favourably developed.

§ 4. Inquiries and Research.

1. General. The Australian fishing industry has been the subject of a number of official inquiries seeking an explanation of the very slow rate of development and the unfortunate conditions prevailing within the industry as well as the paucity of supplies available to the public. The first of these inquiries to be noted was the meeting of State and Commonwealth representatives convened by the Development and Migration Commission with the object of reviewing the potentialities of the fishing industry of Australia. The conference which was held in Melbourne in September, 1927, confirmed the importance of establishing a marine biological institution to study the scientific problems connected with Australian fisheries. Committees were formed to discuss all the important problems of the industry and it was unanimously recommended at the second meeting of the conference held in July, 1929, that investigational work should be undertaken by the Commonwealth Government. The second enquiry of importance was that of the Tariff Board held in 1941 when it was concluded that the development of a prosperous fishing industry would be an important contribution to the war effort and that the stage had been

reached when additional Governmental assistance was desirable. The Board recommended that assistance of the Council for Scientific and Industrial Research should be continued and that a Commonwealth fisheries authority should be established.

In 1942 the Division of Fisheries of the Council for Scientific and Industrial Research prepared, on behalf of the Director-General of Manpower, a register of manpower in the industry and made suggestions for its rationalization under wartime conditions. As a result of these suggestions a Controller of Fisheries was appointed to co-ordinate and organize the industry. The programme included the study of production goals, the control and allocation of manpower, fuel and equipment, the organization of co-operatives within the industry and rationalization of marketing and distribution.

2. Commonwealth Scientific and Industrial Research Organization, Division of Fisheries.—Acting on the recommendation of the 1927-1929 Conference, mentioned above, the Commonwealth Government entrusted to the then Council for Scientific and Industrial Research the task of establishing a marine biological institution. In its original plans the Commonwealth provided a sum of £80,000, spread over a period of five years, for the following purposes:—(i) to procure a vessel specially designed for the exploration of pelagic or surface-swimming fish, but which could also carry out certain investigations of demersal or bottom-dwelling species; (ii) to undertake experiments in the canning of fish and the determination of the chemical composition of fish thought to be suitable for the manufacture of fish by-products; (iii) to determine, by tests, the best methods of curing and preserving fish, especially the more common varieties; and (iv) in co-operation with the State authorities, to undertake a study of the systems of distribution of fish in each State with a view to improving existing transport and marketing facilities. A research vessel constructed at a cost of £17,000 was commissioned in 1938 and a programme of work was laid down extending over a period of five years. During the first three years the investigation was confined to the south-eastern portion of the Australian coast; part of the work was extended later to the south-western portion of the Continent. A modern biological laboratory was established at Port Hacking in New South Wales.

The early work led the Council to place this programme on a permanent basis, and the Division of Fisheries has increased its staff and its work to include (1) an exploratory programme designed to survey new areas and study oceanographical, hydrological and planktological conditions and new fisheries, and (2) a biological programme designed to study the important existing fisheries, both marine and freshwater, shell fisheries, and seaweed resources.

Portions of this programme have already been completed, and much information regarding the pelagic fish (tuna, Australian salmon, horse mackerel or cowan young, kingfish, pilchards, anchovies and sprats) has been collected. As a result of this work commercial catches of sprats are now being made in Tasmania, and the Division's purse-seine net has been used by a commercial fishing crew to take several catches of horse mackerel in Tasmanian and southern New South Wales waters. After seeing experimental hauls with the lampara net by the crew of F.R.V. *Warren*, a commercial crew has taken 16½ tons of pilchards near Albany in south-west Australia.

An experimental shipment of the Pacific oyster from Japan is at present under observation in Australian waters to determine whether this oyster could be successfully transplanted to Australia.

Two research stations to be staffed by the Division have been provided by the Queensland Government; one, situated at Thursday Island, is being used for pearl-shell culture research while the other, at Dunwich, Moreton Bay, will be the centre of general fisheries research, although it will be used particularly for oyster cultivation experiments.

Surveys have been made of beds of the seaweed *Gracilaria* and this weed, and other seaweeds, have been used in the experimental production of agar. As a result of these experiments agar is now being produced commercially in sufficient quantities to supply the Australian market.

Of the original purposes for which the Division was planned, three have now passed to other institutions. The work of research in the canning of fish and the best methods of curing and preserving fish have been taken over by the Division of Food Preservation

and Transport of the Commonwealth Scientific and Industrial Research Organization, and the study of the systems of distribution of fish is now handled by the marketing section of the Division of Fisheries of the Department of Commerce and Agriculture.

3. **Commonwealth Fisheries Authority.**—The Commonwealth Fisheries Office, a section of the Department of Commerce and Agriculture, was established as a result of a recommendation in 1941 by the Tariff Board, after a public inquiry into the fishing industry, that a Commonwealth developmental authority should be established. During the 1939–45 War, Commonwealth control of the fishing industry was exercised by a Controller of Fisheries as part of the Department of War Organization of Industry. The Commonwealth Fisheries Office was established in 1946 and a Director of Fisheries was appointed. In accordance with the Tariff Board report, scientific research, as distinct from developmental and administrative functions, was left to the Commonwealth Scientific and Industrial Research Organization, which had established a Division of Fisheries for the purpose in 1937.

After the revocation of Commonwealth war-time powers, the Commonwealth and State spheres were fixed at an interstate conference in February, 1947. The Commonwealth is responsible for extra-territorial waters, whaling, pearling, rehabilitation of ex-servicemen in the fishing industry, fishery training schools, commercial development of fisheries, promotion of uniform conditions governing catches of various species of fish, statistics, information and publications.

In the discharge of its duty to ex-servicemen the Commonwealth Fisheries Office established a Fisheries Training School at Cronulla, New South Wales, and has conducted four training courses. Ex-servicemen were thoroughly trained in all theoretical and practical aspects of the industry which included deep sea training on the School's own training trawlers.

To assist the rehabilitation of the pearling industry the Fisheries Office appointed a pearling officer with a life-time experience of the industry. By the end of the 1948 season 1,176 tons of pearl-shell had been obtained as compared with 2,543 tons in 1938–39.

The Fisheries Office also carried out extensive work preparatory to the re-establishment of coastal whaling in Australia after the lapse of about 20 years. For this purpose it brought a Norwegian whaling expert to Australia on a year's engagement. Following this developmental work by the Fisheries Office, legislation was passed in 1949 to enable a Government Whaling Commission to be established to begin coastal whaling in Western Australia.

The Fisheries Office publishes every second month a technical journal *Fisheries Newsletter*, which is supplied as a technical and information service to all full-time professional fishermen in Australia.

The Fisheries Office is currently engaged in preparatory work to establish pelagic fishing in Australia for tuna and other valuable canning fish.

4. **North Australia Development Committee.**—In 1945 the North Australia Development Committee gave considerable attention to the fisheries resources of North Australia and recommended that a hydrological and oceanographical survey should be made of the area. It also suggested that a biological survey should be made of pearl shell with particular reference to the possibility of instituting pearl shell culture. It recommended that all information regarding the area should be compiled and made available for scientific workers. It also recommended that an economic survey of the fisheries resources should be made, comparing them particularly with those of the Netherlands East Indies.

5. **Whaling.**—The Whaling Industry Act 1949, passed by the Commonwealth Parliament for the development of the whaling industry, provides for the creation of the Australian Whaling Commission consisting of three members with the powers necessary to establish the industry in Australia. It is intended that a shore station will be erected in Western Australia at Shark Bay using three chaser vessels.

The International Whaling Commission, of which Australia is a member, controls whaling in the Antarctic. The Commission held its first meeting in London in 1949 and Australia was represented by the Director of Fisheries.

Since the Japanese were permitted to resume whaling in the Antarctic in 1946, an inspector of the Commonwealth Fisheries Office has accompanied the whaling fleet on each of the three seasons to police on behalf of Australia their observance of the International Whaling Regulations.

§ 5. The Fishing Industry.

1. **Boats and Men Engaged, and Take.**—(i) *General Fisheries.* The returns have been compiled from particulars supplied by the State Departments, and while the data do not generally lend themselves to presentation on a uniform basis, the principal facts are shown in the following tables. In connexion with the lower figure for Australia for 1947-48 shown for men engaged it should be noted that the New South Wales element in this figure relates to the number of fishermen's licences issued and not to the actual number of men engaged and that the number of fishermen's licences issued in New South Wales fell from 4,892 in 1946-47 to 3,419 in 1947-48. This reduction of 1,473 in 1947-48 followed a reduction of 1,155 in the previous year. This marked decrease in fishermen's licences was due to the enforcement of the law restricting the issue of such licences to persons deriving a substantial portion of their income from personal exertion from the capture and sale of fish. In all other States—except in Western Australia where the numbers were practically unchanged—the numbers of men engaged increased in 1947-48.

(a) See letterpress above.

(ii) *Edible Oyster Fisheries.* Edible oyster fisheries are of small dimensions outside New South Wales and Queensland. The available returns show the following takes during 1947-48 in these States :—New South Wales, 58,693 cwt., value £246,710; Queensland, 6,277 cwt., value £15,916. In Tasmania the scallop is far more important than the oyster, and in 1947-48 the take was valued at £33,115.

Figures for Australia for the years 1938-39 and 1943-44 to 1947-48 are shown in the following table:—

EDIBLE OYSTER FISHERIES : AUSTRALIA.

Particulars.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
No. of boats engaged	754	816	861	892	845	815
No. of men engaged ..	850	790	813	883	666	626
Oysters obtained—						
Quantity (b) cwt.	89,145	55,211	62,518	71,062	75,632	72,456
Gross value (a) £	132,201	137,698	204,465	238,919	266,815	295,763

(a) Includes scallops in Tasmania, valued at £14,500 in 1938-39; £15,428 in 1943-44; £16,300 in 1944-45; £30,750 in 1945-46; £37,256 in 1946-47; and £33,115 in 1947-48. (b) Includes scallops in Tasmania, 4,723 cwt. in 1943-44; 5,019 cwt. in 1944-45; 8,857 cwt. in 1945-46; 7,920 cwt. in 1946-47; and 7,470 cwt. in 1947-48; 1938-39 weight not available.

(iii) *Pearls, Pearl-shell and Bêche-de-mer—States.* At the outbreak of war in the Pacific in December, 1941, the pearling industry ceased to operate. Operations were resumed in Queensland in 1944-45 but in Western Australia and Northern Territory not until 1946-47. There is no pearl-shell industry in the other States. The following table shows particulars of equipment used, men engaged and production for the year 1947-48:—

PEARL, PEARL-SHELL AND BÊCHE-DE-MER FISHERIES, 1947-48.

State or Territory.	Boats Engaged.	Value of Boats and Equipment.	Men employed.	Pearl-shell.		Gross Value of Pearls obtained.	Gross Value of Bêche-de-Mer obtained.	Trochus-shell.	
				Quantity obtained.	Gross Value.			Quantity obtained.	Gross Value.

(iv) *Australia.* A summary of the principal statistics relating to pearl, pearl-shell and bêche-de-mer fisheries is given in the following table for the years 1938-39 to 1940-41 and 1945-46 to 1947-48.

Details of exports of these items are given in § 6, par. 3 hereafter.

PEARL, PEARL-SHELL AND BÊCHE-DE-MER FISHERIES : AUSTRALIA.

Particulars.	1938-39.	1939-40.	1940-41.	1945-46.	1946-47.	1947-48.

(a) Queensland only available.

(b) Incomplete; as returned.

2. Value of Production—Gross and Local.—(i) *General.* Although statistics of the value of production of the fishing industry have been on an established basis for some years, attention is drawn to the fact that the actual collection of statistics of the quantity of fish taken presents many difficulties and consequently any defects which may occur in their collection must necessarily be reflected in the value of production. Particulars of the value of other materials used in the process of production are not available for all States, so the values can only be stated at the point of production and not on a net basis as has been done with other industries. Variations in the relative proportions of marketing costs to gross production suggest that complete uniformity in method has not yet been attained.

GROSS AND LOCAL VALUE OF FISHERIES PRODUCTION.

(a) No deduction has been made for depreciation and maintenance.

(b) Not available.

(c) Excludes production in the Northern Territory.

(ii) *States, 1938-39 to 1947-48.* In the following table the local value of fisheries production and the local value per head of population are given by States for the years 1938-39 to 1947-48. Local value is gross value less marketing costs and is the value at the place of production. The value of materials used in the course of production is not available for all States and consequently production is valued at that point. These values therefore overstate the net values by the extent of these costs.

LOCAL VALUE OF FISHERIES PRODUCTION.

(a) No deduction has been made for depreciation and maintenance.

3. **Fish Preserving.**—The attempt to establish the fish preserving industry at the commencement of this century met with little success although a bounty was paid to encourage production. The industry, however, has continued to operate, but there was no marked development until about 1945-46. In that year, production of canned fish amounted to 1,700,000 lb., in 1946-47 to 3,700,000 lb. and in 1947-48 to 9,700,000 lb.

In addition to the canning of fish, other fish products are obtained. The quantities produced during 1947-48 were 865,511 lb. of smoked fish and 1,524,491 lb. of fish paste.

In 1939 New South Wales and Tasmania were the only producing States, but by 1941 the industry had been extended to South Australia and Western Australia. Details of production are given in the following table for the years 1938-39 and 1943-44 to 1947-48.

PRODUCTION OF CANNED FISH : AUSTRALIA.

Particulars.	1938-39.	1943-44.	1944-45. (a)	1945-46.	1946-47.	1947-48.
Number of factories operating ..	3	7	8	11	12	16
Quantity .. lb.	603,302	533,740	1,038,771	1,683,612	3,717,248	9,731,702
Value .. £	13,700	43,856	102,607	147,016	326,078	727,660

(a) Incomplete.

The varieties canned in the various States differ according to the catch available, but separate details for each variety are not available. In New South Wales salmon is the principal variety, while in South Australia there are more varieties, including mullet, salmon, garfish, etc. In Western Australia herrings, crayfish and mullet are included, and in Tasmania salmon and crayfish.

4. State Revenue from Fisheries.—The revenue from fisheries in each State during the year 1947-48 is shown hereunder together with the totals for the previous four years and 1938-39 :—

FISHERIES : REVENUE, 1947-48.

Total	1,470,854	866,817	585,147	1,026,446	3,144,091	3,340,432

(a) Not recorded separately.

Canned fish constituted by far the largest proportion of the imports; salmon from Canada, herrings from Canada and the United Kingdom, pilchards from the Union of South Africa and sardines from Norway were the chief varieties imported. The potted fish came chiefly from the United Kingdom and New Zealand, which also supplied a considerable proportion of the fresh fish imported in 1948-49; the bulk of the remainder came from the Union of South Africa. The small import of oysters was supplied by New Zealand, which has also furnished the bulk of the crustaceans imported in recent years.

2. **Exports of Fish.**—During 1948-49 the exports of fish of Australian origin were as follows :—oysters in shell, 918 cwt., £6,605; other fresh or preserved by cold process, 19,594 cwt., £399,186; potted or concentrated, 1,670 cwt., £47,651; fish preserved in tins, 37,435 cwt., £377,075; shell fish in tins, 176 cwt., £2,529; smoked or dried, 146 cwt., £2,234 and other fish, 1 cwt., £9.

3. **Exports of Pearl and other Shell.**—The exports of pearl, tortoise and trochus-shell of Australian origin are shown hereunder for the years 1938-39 and 1944-45 to 1948-49 :—

CHAPTER XXIV. MANUFACTURING INDUSTRY.

NOTE.—Working proprietors are included in all cases in the "Number of Persons Engaged".

Single-year tables in this issue relate to the year 1947-48 and in the immediately preceding issue to the year 1945-46. Corresponding tables for 1946-47 may be found in the *Production Bulletin* 1946-47, No. 41, Part I.—Secondary Industries

§ 1. Number of Factories.

1. Number of Factories in each State.—For statistical purposes, a "factory" was defined by the Conference of Statisticians in 1902 as any factory, workshop or mill where four or more persons are employed or power is used. The statistics which follow should be read in the light of this definition. The following table shows the number of factories in each State for the five years 1943-44 to 1947-48 compared with 1938-39 :—

FACTORIES : NUMBER.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938-39 ..	9,464	9,250	3,087	2,067	2,129	944	26,941
1943-44 ..	10,755	9,317	2,652	2,149	1,807	994	27,674
1944-45 ..	11,359	9,669	2,783	2,132	1,931	1,006	28,930
1945-46 ..	12,287	10,195	2,945	2,395	2,280	1,082	31,184
1946-47 ..	13,961	10,949	3,367	2,707	2,615	1,169	34,768
1947-48 ..	15,194	11,642	3,642	2,865	2,788	1,225	37,356

2. Number of Factories in Industrial Classes.—(i) *Australia.* The next table shows the number of factories in Australia during 1938-39 and the years 1943-44 to 1947-48 classified in the industrial classes agreed upon by the Conference of Statisticians in 1930. This classification, which was introduced during 1930-31, superseded the grouping which had been in use since 1902. The definition of a factory adopted at the Conference of Statisticians in 1902 is, however, still used. Details of some of the principal industries included in the table will be found in § 9 hereinafter.

FACTORIES : NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

Grand Total	26,941	27,674	28,930	31,184	34,768	37,356

Although not the best index of manufacturing activity, the number of factories affords some indication of the development of secondary industries. From 1931-32 to 1940-41 the number of factories increased each year but in the two succeeding years there were decreases. However, this was followed by increases in 1943-44 and each succeeding year to 1947-48 when the number of factories in Australia reached the record total of 37,356 or 38.7 per cent. greater than in 1938-39.

(ii) *States, 1947-48.* The following table shows the number of factories in each State in 1947-48, classified according to the nature of the industry :—

FACTORIES : NUMBER IN INDUSTRIAL CLASSES, 1947-48.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-Metalliferous							
Mine and Quarry Products ..	350	316	63	92	74	38	933

§ 2. Classification of Factories according to Number of Persons Engaged.

1. *General.*—Prior to 1945-46 the classification of factories used ended at the group "Over 100". This was regarded as too restricted as it did not permit of any analysis of the development of factories in size groups above 100 employees. In consultation with the State Statistical Bureaux, it was agreed to extend, in 1945-46, the classification of factories according to size in the manner shown in the table below in respect of numbers of factories and, in the table which follows, in respect of numbers employed.

2. *States, 1947-48.*—The following table shows, for each State, the number of factories classified according to the number of persons engaged in 1947-48 :—

FACTORIES : CLASSIFICATION ACCORDING TO SIZE OF FACTORY, 1947-48.

Size of Factory (Persons engaged).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
NUMBER OF FACTORIES.							
Under 4 ..	4,402	3,314	930	738	1,219	388	10,991
4 ..	1,372	1,025	373	260	139	127	3,296
5 to 10 ..	4,152	2,938	1,072	827	751	384	10,124
11 to 20 ..	2,272	1,794	561	443	303	163	5,536
21 to 50 ..	1,799	1,517	426	347	238	102	4,429
51 to 100 ..	625	559	132	141	90	38	1,585
101 to 200 ..	315	279	102	52	34	12	794
201 to 300 ..	85	90	25	28	11	3	242
301 to 400 ..	49	44	7	10	2	..	112
401 to 500 ..	39	28	2	2	..	2	73
501 to 750 ..	34	30	7	7	..	2	80
751 to 1,000 ..	18	15	2	3	..	2	40
Over 1,000 ..	32	9	3	7	1	2	54
Total ..	15,194	11,642	3,642	2,865	2,788	1,225	37,356

The relative importance of large and small factories is illustrated by a classification of the average number of persons engaged according to the size of factory in which they work:—

FACTORIES : CLASSIFICATION OF PERSONS ENGAGED ACCORDING TO SIZE OF FACTORY, 1947-48.

Size of Factory (Persons engaged).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
AVERAGE NUMBER ENGAGED DURING PERIOD WORKED.							
Under 4 ..	9,166	6,853	1,998	1,563	2,541	877	22,998
4 ..	5,488	4,100	1,492	1,040	556	508	13,184
5 to 10 ..	28,784	20,236	7,490	5,752	5,016	2,566	69,844
11 to 20 ..	33,220	26,440	8,139	6,451	4,455	2,354	81,059
21 to 50 ..	56,440	47,556	13,141	10,775	7,615	3,250	138,777
51 to 100 ..	43,618	39,462	9,595	9,612	6,021	2,773	111,081
101 to 200 ..	42,831	38,523	14,879	7,179	4,597	1,625	109,634
201 to 300 ..	20,854	21,928	6,047	6,559	2,588	850	58,826
301 to 400 ..	16,777	14,751	2,363	3,279	775	..	37,945
401 to 500 ..	17,368	12,466	966	920	..	890	32,610
501 to 750 ..	20,613	17,173	4,357	4,155	..	1,291	47,589
751 to 1,000 ..	15,399	13,137	1,734	2,696	..	1,559	34,525
Over 1,000 ..	56,292	17,335	5,103	13,883	2,468	3,515	98,596
Total ..	366,850	279,960	77,304	73,864	36,632	22,058	856,668
Average per Factory ..	24.14	24.05	21.23	25.78	13.14	18.01	22.93

3. Australia, 1938-39 and 1943-44 to 1947-48.—In the following table factories in Australia during 1938-39 and each of the five years 1943-44 to 1947-48 are classified according to the number of persons engaged, in conformity with the practice prior to 1945-46.

FACTORIES : CLASSIFICATION ACCORDING TO NUMBER OF PERSONS ENGAGED, AUSTRALIA.

Year.	Establishments Employing on the Average—

§ 3. Power Equipment in Factories.

1. **General.**—In 1936-37 statistics of power equipment in factories were collected on a basis different from that previously in use. Information now obtained relates to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of Central Electric Stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between Central Electric Stations and other classes of industries. In the following tables Central Electric Stations have been treated separately from other factories.

In par. 2 below, 1,322 factories are shown as using no power other than hand-power, the distribution of these factories among the various industries being as follows: Line, Plaster and Asphalt, 17; Chemicals, Drugs and Medicines, 17; Galvanized Ironworking, Tinsmithing, 39; Ready-made Tailoring and Clothing, 372; Dressmaking, 117; Millinery, 45; Bakeries, 163; Cabinet and Furniture Making, 40; all other industries, 512.

2. **Rated Horse-power of Engines in Factories other than Central Electric Stations.**—The following table shows the number of factories using steam, gas, oil, electricity, or water power, those using hand-power, and the rated horse-power of engines ordinarily in use and in reserve or idle during 1947-48:—

FACTORIES(a) : RATED HORSE-POWER OF ENGINES, 1947-48.

State.	Number of Establishments.			Rated Horse-power of Engines.	
	Using Power.	Others.	Total.	Ordinarily in use.	In Reserve or Idle (omitting obsolete)
New South Wales ..	14,837	264	15,101	1,095,939	133,155
Victoria ..	11,192	383	11,575	740,046	102,647
Queensland ..	3,392	204	3,596	271,141	31,956
South Australia ..	2,604	220	2,824	205,220	27,262
Western Australia ..	2,463	212	2,675	101,506	10,384
Tasmania ..	1,183	39	1,222	121,715	16,711
Australia..	35,671	1,322	36,993	2,535,567	322,115

(a) Excludes Central Electric Stations.

3. **Rated Horse-power of Engines Ordinarily in Use.**—(i) *According to Type, States.* Particulars of the types of engines ordinarily in use in each State and their rated horse-power are given in the next table:—

FACTORIES(a) : TYPES AND RATED HORSE-POWER OF ENGINES ORDINARILY IN USE, 1947-48.

State.	Rated Horse-power of Engines ordinarily in use.							
	Steam.		Internal Combustion.			Water.	Motors driven by electricity.	
	Reciprocating.	Turbine.	Gas.	Light Oils.	Heavy Oils.		Purchased.	Own Generation. (c)

§ 4. Employment in Factories.

1. Number Engaged.—(i) General. All persons engaged in the manufacturing activities of a factory, including proprietors who work in their own business and "outworkers" (see par. 4 (ii) hereinafter) are counted as factory employees, while all those are excluded who are engaged in selling and distributing, such as salesmen, travellers, collectors, carters engaged solely on outward delivery of manufactured goods and retailing storemen. Prior to 1945-46 the classification of employment distinguished between (i) working proprietors; (ii) managers and overseers; (iii) accountants and clerks; (iv) engine-drivers and firemen; (v) workers, skilled and unskilled; (vi) carters and messengers; and (vii) others. This grouping, however, did not make adequate provision for measuring the development that has taken place in the employment of chemists and other research workers. As a result, the classification of factory employment was amended in 1945-46 to read as follows:—(i) Working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; (iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers and persons working regularly at home for factory, mill or workshop.

Prior to the year 1928-29 employment in factories was computed by dividing the sum of the number engaged each week by the number of weeks worked. The figures therefore, represented the average number engaged over the period worked, which, for many factories, was less than a full year. Commencing with the year 1928-29 the figure represents the equivalent average number engaged over a full year of fifty-two weeks. The classification of factories according to the number of persons engaged (*see* § 2 *ante*), however, is still based on the old method, but for all other purposes the average number engaged over the full year is used.

(ii) *Australia*, 1938-39 to 1947-48. Particulars of the number employed, the increase in employment and the rate per cent. of such increase are given for years 1938-39 to 1947-48 in the following table:—

NOTE.—Minus sign (—) indicates decrease.

3. Persons Engaged in Classes of Industry.—(i) *Australia.* The following table shows the average number of persons engaged in factories under each industrial group in Australia for the years 1938-39 and 1943-44 to 1947-48.

FACTORIES : PERSONS ENGAGED IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
I. Treatment of Non-metalliferous Mine and Quarry Products ..	10,343	7,701	7,933	9,929	12,673	14,263
II. Bricks, Pottery, Glass, etc. ..	15,709	9,616	10,459	13,466	16,535	17,536
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	19,816	42,551	36,340	31,471	31,252	31,808
IV. Industrial Metals, Machines, Conveyances ..	177,677	341,030	319,314	292,477	300,921	320,948
V. Precious Metals, Jewellery and Plate ..	3,726	2,373	2,399	3,240	4,021	6,069
VI. Textiles and Textile Goods (not Dress)	46,082	58,539	57,404	55,008	59,810	61,911
VII. Skins and Leather (not Clothing or Footwear) ..	10,767	12,708	12,474	14,492	16,080	15,624
VIII. Clothing (except Knitted) ..	86,092	80,692	86,391	93,370	106,804	111,693
IX. Food, Drink and Tobacco ..	83,846	101,030	105,194	105,878	109,840	113,595
X. Woodworking and Basketware ..	30,739	34,827	35,382	38,346	43,457	47,052
XI. Furniture of Wood, Bedding, etc. ..	15,287	9,563	9,930	13,107	10,579	18,546
XII. Paper, Stationery, Printing, Book-binding, etc. ..	30,913	35,193	36,726	39,905	46,651	47,813
XIII. Rubber ..	7,502	7,961	7,970	8,699	10,173	10,753
XIV. Musical Instruments ..	451	353	392	459	788	887
XV. Miscellaneous Products ..	7,727	12,099	13,018	14,838	17,059	18,235
Total, Classes I. to XV.	555,677	757,436	741,126	734,685	793,633	830,733
XVI. Heat, Light and Power ..	9,429	9,070	9,453	10,573	11,296	12,143
Grand Total ..	565,106	766,506	750,579	745,258	804,929	848,876

Following the outbreak of war in the Pacific in 1941, the transfer of man-power to the more essential industries became apparent, and industries not directly concerned with Australia's war effort showed a marked decline. The industries which declined were those in Class I., Mine and Quarry Products; Class II., Bricks, Pottery, Glass, etc. Class V., Precious Metals; Class VIII., Clothing; Class XI., Furniture; and Class XII.

Paper, etc., while industries where the war-time expansion in employment occurred were those in Class III., Chemicals, etc.; Class IV., Metals, etc.; Class VI., Textiles; Class VII., Skins and Leather; and Class IX., Food.

Following some downward movement from war-time levels of employment which occurred in Class III., Chemicals, etc.; Class IV., Metals, etc.; and Class VI., Textiles in 1945-46, there was a general upward trend in 1946-47, and this continued in respect of each class of industry in 1947-48.

(ii) *States.* Particulars of the numbers engaged in each industrial class are shown in the following table for each State:—

FACTORIES : PERSONS ENGAGED IN INDUSTRIAL CLASSES, 1947-48.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	Aust.
I. Treatment of Non-ferrous Mine and Quarry Products ..	5,956	4,263	1,423	1,071	1,007	543	14,263
II. Bricks, Pottery, Glass, etc. ..	9,845	4,124	952	1,577	851	187	17,536
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	14,914	11,030	1,141	3,008	1,540	175	31,808
IV. Industrial Metals, Machines, Conveyances ..	153,367	89,771	24,162	35,165	12,422	6,061	320,948

IX. Food, Drink and Tobacco ..	37,541	35,708	20,091	10,235	5,769	4,251	113,595
X. Woodworking and Basketware ..	17,030	11,826	8,772	3,147	3,552	2,725	47,052
XI. Furniture of Wood, Bedding, etc. ..	7,098	5,077	2,620	1,815	1,305	631	18,546
XII. Paper, Stationery, Printing, Bookbinding, etc. ..	20,979	15,674	4,119	3,010	1,969	2,062	47,813
XIII. Rubber ..	5,037	4,242	793	483	106	92	10,753
XIV. Musical Instruments ..	657	123	32	51	24	..	887
XV. Miscellaneous Products ..	8,904	7,320	584	756	412	259	18,235
Total, Classes I. to XV.	358,391	274,956	75,561	71,906	34,927	20,992	836,733
XVI. Heat, Light and Power ..	4,974	3,315	1,193	1,440	1,040	181	12,143
Grand Total ..	363,365	278,271	76,754	73,346	35,967	21,173	848,876

4. *Persons Engaged According to Occupational Status.*—(i) *General.* In the following table the average number of persons engaged in each State during 1947-48 are classified according to their occupational status. As mentioned previously, persons employed in factories are now classified on a basis different from that adopted prior to 1945-46. The nature of this change is indicated in § 4 (i).

PERSONS ENGAGED : OCCUPATIONAL STATUS, 1947-48.

State.	Average Number of Persons Engaged.						Total.
	Working Pro- priators.	Manager- ial and Clerical Staff, etc.(a)	Chemists, Drafts- men, etc.	Foremen and Overseers.	Workers in Factory (Skilled and Un- skilled).	Carters (excluding Delivery only) and Messen- gers, etc. (b)	
New South Wales ..	12,283	35,939	4,269	13,753	294,699	2,422	363,365
Victoria ..	9,774	26,753	3,120	10,972	225,515	2,137	278,271
Queensland ..	3,022	6,821	552	2,460	63,241	658	76,754
South Australia ..	2,015	7,492	893	2,734	59,843	369	73,346
Western Australia ..	2,021	2,618	237	1,216	29,736	139	35,967
Tasmania ..	828	1,878	258	816	17,249	144	21,173
Australia ..	29,943	81,501	9,329	31,951	690,283	5,869	848,876

(a) Includes salaried managers and working directors.
at home.

(b) Includes persons working regularly

(ii) *Outworkers.* The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and technically embraces only those to whom work is given out by factory owners to be done in the employees' own homes. Details of the numbers of outworkers employed for years up to 1944-45 were shown on page 1048 of Official Year Book No. 37 and in earlier issues. Owing to the altered classification of employment adopted in 1945-46, persons working regularly at home for factories are now included with carters and messengers and separate details of the numbers of homeworkers are no longer available.

5. *Monthly Employment, 1938-39 and 1944-45 to 1948-49.*—The number of persons employed in factories (excluding working proprietors) on the pay-day nearest to the 15th of each month is shown in the following table for the years 1938-39 and 1944-45 to 1948-49.

FACTORIES : MONTHLY EMPLOYMENT, AUSTRALIA.

(a) Preliminary estimates.

6. Distribution of Employees According to Age.—(i) *States.* The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, permits of a distribution of employees (excluding working proprietors) into seven age-groups from 1945-46 onwards, instead of three as in previous years. The particulars are collected as at June. The numbers employed in each age-group in June, 1948, are given below:—

FACTORIES: DISTRIBUTION OF EMPLOYEES ACCORDING TO AGE, JUNE, 1948.
(Excluding Working Proprietors.)

§ 5. Sex Distribution in Factories.

1. *Distribution According to Sex of Persons Engaged.*—(i) *General.* In New South Wales the ratio of the number of females engaged in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and in 1947-48 was one to three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one to three, and in 1947-48 was about one to two. In the remaining States the ratio in 1947-48 was roughly one female engaged to every four males. For Australia as a whole the ratio of females employed in factories was highest in 1943-44 at about two females to five males but by 1947-48 the ratio had declined to the level of one female to three males.

(ii) *Average Number of Males and Females Engaged.* The following table shows the average number of males and females engaged in factories in each State for 1938-39 and the five years 1943-44 to 1947-48:—

FACTORIES : MALES AND FEMALES ENGAGED.

NOTE.—The minus sign (—) indicates decrease.

3. **Masculinity of Persons Engaged in Factories.**—The extent to which females are engaged in the factories of Australia may perhaps be more clearly shown by giving the masculinity of persons engaged in each State. The following table shows particulars for the years 1938-39 and 1943-44 to 1947-48 :—

FACTORIES : MASCULINITY(a) OF PERSONS ENGAGED.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
1938-39 ..	271	208	432	445	415	420	271
1943-44 ..	236	203	367	268	299	289	237

1945-46 ..	273	232	451	362	405	366	280
1946-47 ..	293	245	483	406	443	432	301
1947-48 ..	300	251	480	414	458	434	308

(a) Number of males per 100 females.

For a number of years prior to 1926-27 there were on the average 300 males engaged in factories for every 100 females, but in that year the proportion of males began to fall with the increasing activity in the clothing and textile industries, in which the number of females to males is relatively high. As these trades were not so seriously affected by the depression as the heavier industries, the proportion of males continued to fall, until in 1932-33 there were only 239 males engaged to every 100 females. With the recovery of employment in the heavier industries subsequent to that year, the proportion of males per 100 females had increased to 271 in 1937-38 and 1938-39.

The decrease in masculinity from 1938-39 to 1943-44 resulted from the enlistment of men in the armed services and the expansion of industry caused by the war. In many industries the younger men were released for service in the defence forces and large numbers of women were absorbed as an adjustment to the industrial effort of Australia. Following the cessation of hostilities in 1945 and the return of servicemen to civilian life, the number of females employed in factories declined and masculinity increased. In 1947-48 there were 308 males per 100 females employed in factories, compared with 271 in 1938-39.

4. **Employment of Females in Particular Industries.**—(i) *General.* The greater number of females in manufacturing industries are engaged in four classes, namely:—IV., Industrial Metals, Machines, etc.; VI., Textiles; VIII., Clothing; and IX., Food, Drink and Tobacco. In 1947-48 these industries accounted for 86.16 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 109 females to every 100 males and in Class VIII., Clothing, with 245 females per 100 males. The following tables show the average number of males and females engaged in each of these classes in 1947-48:—

MALES AND FEMALES ENGAGED IN PARTICULAR INDUSTRIES, 1947-48.

Class.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

(a) Number of females per 100 males.

(b) Not applicable.

§ 6. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in the States is regulated by Acts of Parliament, as is the case with the employment of female labour. The object of the restrictions imposed is to ensure, amongst other things, that a proper period shall be devoted to primary education, and that the early years of labour shall not exhaust the worker before the attainment of full growth.

2. **Number of Children Engaged, 1939 and 1944 to 1948.**—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The decline in the number of children employed from the peak of 33,553 reached in June, 1940 to 14,283 in June, 1948, which is most marked in all States excepting Western Australia, was probably caused by several factors, including (i) the raising of the school leaving age in New South Wales and Tasmania, (ii) fewer children available for employment owing to the decline in the birth rate which occurred about 1929, and (iii) the high level of employment which enabled parents to keep their children at school beyond the statutory leaving age.

The following table shows the number of children of each sex employed in manufacturing industries in June of the years 1939 and 1944 to 1948.

FACTORIES : CHILDREN ENGAGED, JUNE.

3. **Percentage of Children on Total Number of Persons Engaged.**—The following table shows the percentage of children on the total number of persons engaged in the various states in June of each of the six years 1939 and 1944 to 1948. In 1948 the percentage was highest in Western Australia and lowest in New South Wales.

PERCENTAGE OF CHILDREN ON TOTAL NUMBER OF PERSONS ENGAGED.
(Excluding Working Proprietors.)

State.	June—					
	1939.	1944.	1945.	1946.	1947.	1948.

Grand Total ..	7,734	6,549	625,019	208,041	1.24	3.15

(a) Excludes working proprietors.

5. Apprenticeship.—In all the States, acts are in force for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

§ 7. Salaries and Wages Paid and Value of Production.

NOTE.—In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

1. *General.*—The importance of the manufacturing industries of Australia is indicated by the fact that the total value of the output for 1947-48 was £1,210,119,397, of which amount £83,729,030 represented the value of the materials used, including containers, etc., tools replaced and repairs to plant and buildings, and £37,093,719 the value of the power, fuel and light used. The difference between the sum of the last two amounts and the value of the output, namely £489,296,648, represents the value of production as defined by the Conference of Statisticians at Sydney in 1925, i.e. "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production." The total amount of salaries and wages paid in factories in 1947-48 was £285,765,264. This figure, which excludes amounts drawn by working proprietors, was the highest ever recorded and shows an increase of £48,591,498 or 20.49 per cent. on that for the previous year.

2. *Salaries and Wages Paid.*—(i) *In Classes of Industry, 1947-48.* The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table:—

FACTORIES : SALARIES AND WAGES PAID, 1947-48.

(ii) *Totals and Averages, 1938-39 and 1943-44 to 1947-48.* The following statement shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each of the years indicated. The average wage paid is not comparable with that shown in similar tables in issues of the Official Year Book prior

to No. 23, 1930, on account of the change in the method of computing the average number of hands employed, as explained earlier. The figures exclude working proprietors and the amounts drawn by them:—

FACTORIES : TOTAL AND AVERAGE SALARIES AND WAGES PAID.
(£.)

Year.	Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.
1938-39	Total amount paid..	44,606,497	36,026,542	10,887,229	8,169,350	4,573,558	2,479,886	106,743,002

1946-47	Total amount paid..	103,587,559	77,993,765	20,310,541	20,538,958	9,105,010	5,637,933	237,173,766
	Average per employee	312.12	303.82	295.51	298.72	284.35	294.39	305.12
1947-48	Total amount paid..	125,345,878	93,802,188	24,163,216	24,852,998	10,735,647	6,865,337	285,765,264
	Average per employee	357.03	349.36	327.72	318.42	316.26	337.45	348.95

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, there is a large number of hands employed in Class VIII., Clothing, comprising a relatively high percentage of women and children. The highest average wages per employee in 1947-48 were paid in New South Wales, Victoria and South Australia in that order.

The average earnings per employee rose annually from 1938-39 to 1943-44 when a record high level of £291 was attained as a result of war-time conditions. In 1944-45 the average dropped to £285 and remained at this level in 1945-46. In 1946-47 average earnings rose again, and in 1947-48 reached a new record level of almost £349.

(iii) *Earnings of Males and Females, 1947-48.* The following table shows the approximate amount of salaries and wages paid to males and females in each class of industry in each State during the year 1947-48:—

SALARIES AND WAGES : MALE AND FEMALE FACTORY EMPLOYEES, 1947-48.

3. Power, Fuel and Light Used.—(i) *In Classes of Industry, 1947-48.* The expenditure by factories on power, fuel and light, including the value of lubricants and water, is of considerable importance; in 1947-48 it amounted to a new high level of £37,093,719, an increase of £6,073,619 as compared with the previous year and more than two and one third times the corresponding value in 1938-39. The following table, shows the value of power, fuel and light, etc., used in the different classes of industry in 1947-48 :—

FACTORIES : VALUE OF POWER, FUEL AND LIGHT USED (a), 1947-48.

5. *Value of Output.*—(i) *In Classes of Industry, 1947-48.* The value of the output of factories in the various classes in each State in 1947-48 is shown in the following table. It represents the wholesale selling value at the factory of goods made or processed during the year, including by-products. In addition, it includes the value of other work done such as repair work, assembling and making up for customers. The figures given include not only the increase in value due to the process of manufacture, but also the values of the raw materials and the power, fuel and light used. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the real value of factory production (*see par. 6*).

6. Value of Production.—(i) *In Classes of Industry, 1947-48.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting so far as possible, the value of goods consumed in process of production".

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". All these deductions with the exception of depreciation are included in the items "value of materials used" and "value of fuel used" as defined above. On account of the difficulty experienced in securing accurate figures for depreciation, it was subsequently agreed that the particulars obtained should be published but that no deduction should be made on this account for the present. The value of production as given in the following tables is obtained, therefore, by deducting "value of materials used" and "value of fuel used" from the "value of the output."

The figure thus calculated is, however, not the net value of production. The deduction for depreciation, particulars of which are shown in § 8, par. 4, was estimated at £20,591,370 for 1947-48. Many miscellaneous expenses, such as taxation, insurance, advertising and other sundry charges have not been taken into account. Therefore, it must not be inferred that when wages and salaries are deducted from the value of production the whole of the "surplus" is available for interest and profit.

The value of factory production therefore approximates "net value added" in the manufacturing process. It amounted in 1947-48 to £489.3 million to which Class IV., Industrial Metals, etc., with £181.3 million or almost three times the value of production of this class in 1938-39, made the greatest contribution. This total value of production in 1947-48 represented an increase of £78.4 million over the figure for 1946-47 and almost £286 million (or 140 per cent.) on the value of production recorded in 1938-39.

The following table shows the value of production in 1947-48 in each State for the various classes of industry:—

(ii) *Total and Averages, 1938-39 and 1943-44 to 1947-48.* The value of production and the amount per person engaged and per head of population are shown in the following table for the last five years compared with 1938-39. For Australia as a whole the value of production per head of population increased from £29.41 per head in 1938-39 to £64.04 per head in 1947-48. For value per person engaged, the increase was not so pronounced (from £360 per head in 1938-39 to £576 in 1947-48) owing to the considerable increase in the numbers of persons engaged in 1947-48 as compared with 1938-39.

7. *Value of Output and Cost of Production.*—As the total value of the output for Australia for 1947-48 was estimated at £1,210,119,397, there remained, after payment of £683,729,030 for the value of the materials used, £285,765,264 for salaries and wages, and £37,093,719 for power, fuel and light, a balance of £203,531,384 to provide for all other costs and overhead expenses such as rent, interest, insurance, pay-roll tax, income tax, depreciation etc., as well as drawings by working proprietors and profit. The following table gives corresponding particulars for each State expressed absolutely and as percentages on the total value of the output for the year 1947-48 :—

FACTORIES: VALUE OF OUTPUT AND COST OF PRODUCTION, 1947-48—
continued.

State.	Materials Used. (a)	Power, Fuel and Light. (b)	Salaries and Wages.	Balance (Output less Materials, Fuel and Wages.)(c)	Total Value of Output.
PERCENTAGE OF COSTS, ETC., ON TOTAL VALUE.					
New South Wales ..	55.36	3.28	23.72	17.64	100.00
Victoria ..	55.61	2.39	24.85	17.15	100.00
Queensland ..	63.22	2.54	19.29	14.95	100.00
South Australia ..	58.93	4.09	23.77	13.21	100.00
Western Australia ..	54.70	5.01	23.53	16.76	100.00
Tasmania ..	53.93	3.53	23.85	18.69	100.00
Australia ..	56.50	3.07	23.61	16.82	100.00

(a) Includes the value of containers, packing, etc., also the cost of tools replaced and repairs to plant
(b) Includes lubricants and water. (c) See paragraph preceding this table.

§ 8. Value of Land, Buildings, Plant and Machinery.

1. General.—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1947-48:—

FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a), 1947-48.
(£.)

Value of—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
Land and buildings	91,860,393	66,229,391	16,608,766	20,690,827	9,482,660	6,271,365	211,143,402
Plant and machinery	86,714,082	65,829,201	21,830,685	20,239,623	9,189,910	9,915,837	213,719,338
Total ..	178,574,475	132,058,592	38,439,451	40,930,450	18,672,570	16,187,202	424,862,740

(a) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates for premises and plant rented. The totals shown in the table consequently do not represent the actual amount of capital invested in the items specified.

2. Value of Land and Buildings.—(i) *Total for Australia, 1938-39 and 1943-44 to 1947-48.* The following table shows for Australia as a whole the approximate value of land and buildings occupied in connexion with manufacturing industries for 1938-39 and 1943-44 to 1947-48.

FACTORIES : VALUE OF LAND AND BUILDINGS(a), AUSTRALIA.
(£.)

Class of Industry.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

(a) Includes estimated value of rented premises.

(iii) *Totals in each State.* The following table shows the value of land and buildings in each State for the years 1938-39 and 1943-44 to 1947-48 :—

FACTORIES : VALUE OF LAND AND BUILDINGS.(a)
(£.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938-39 ..	57,353,625	42,026,245	12,299,089	8,710,700	6,813,653	3,717,102	130,920,414
1943-44 ..	78,978,013	55,062,982	13,262,504	17,629,235	6,920,805	5,293,066	177,146,605
1944-45 ..	81,058,876	57,808,861	13,689,055	16,877,449	7,654,187	5,491,679	182,580,107
1945-46 ..	80,308,347	60,264,953	14,331,556	18,446,966	8,282,694	5,304,703	186,939,219
1946-47 ..	81,894,595	62,771,493	15,391,033	18,059,534	8,756,924	5,678,205	193,151,784
1947-48 ..	91,860,393	66,229,391	16,608,766	20,690,827	9,482,660	6,271,365	211,143,402

(a) Includes estimated value of rented premises.

Prior to 1929-30 the increase in the value of land and buildings was uninterrupted, rising from £23 million in 1903 to £118 million in 1929-30, a growth of £95 million in 27 years. During the three years ended 1932-33, however, there was a decline of £12 million to £105.8 million, but since that year the value has risen annually and stood at £211.1 million in 1947-48.

3. *Value of Plant and Machinery.*—(i) *Total for Australia, 1938-39 and 1943-44 to 1947-48.* The following table shows for Australia the approximate value of plant and machinery used in factories in 1938-39 and each of the five years ended 1947-48 :—

FACTORIES : VALUE OF PLANT AND MACHINERY(a), AUSTRALIA.
(£.)

Class of Industry.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

Total, Classes I. to XV. ..	108,412,205	143,207,419	144,044,998	143,938,863	147,393,260	168,896,128
XVI. Heat, Light and Power ..	35,249,922	37,785,350	39,872,062	41,606,077	42,299,831	44,823,210
Grand Total ..	143,662,127	180,992,769	183,917,060	185,544,940	189,693,091	213,719,338

(a) Includes estimated value of rented plant.

Except for the years 1930-31 to 1933-34, when decreases were recorded, there has been a continuous increase in the value of plant and machinery in Australia. The increase in 1947-48 of £24.0 million extended over all industrial classes. The greatest increase occurred in Class IV., Industrial Metals, Machines, Conveyances.

(ii) *Totals in each State.* The following table shows the value of plant and machinery in each State during the years 1943-44 to 1947-48 compared with 1938-39. During 1947-48 increases occurred in all States, New South Wales showing the largest increase, £11.5 million.

1946-47 ..	193,152	189,693	7,791	27,110	2,747	15,978
1947-48 ..	211,143	213,719	9,739	35,616	2,537	18,054

(a) Includes estimated value of rented premises and machinery.

§ 9. Individual Industries.

1. **General.**—The preceding pages afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this work, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour and capital or for other features of special interest. Where there are only one to two establishments of a particular industry in a State, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

2. **Portland Cement and Cement Goods.**—The manufacture of portland cement and cement goods is an important industry included in Class I. Following changes in classification introduced in 1945-46 and 1946-47, it is now possible to publish separate details for each of the three groups Portland Cement, Asbestos Cement Sheets and Mouldings, and Other Cement Goods. Particulars for each group are shown for 1947-48 in the following table.

PORTLAND CEMENT, ASBESTOS CEMENT SHEETS ETC., AND OTHER CEMENT GOODS : AUSTRALIA, 1947-48.

Items.	Portland Cement.	Asbestos Cement Sheets and Mouldings.	Other Cement Goods.	Total.
Number of factories	10	11	307	328
Number of persons engaged	1,836	2,043	2,877	6,756

.. .. £	..	2,076,715	..	2,076,715

3. **Chemicals, Drugs and Medicines.**—In 1945-46 the classification of factories was amended to provide for the separate tabulation of factories engaged in the production of Industrial and Heavy Chemicals and Acids and those engaged in producing Pharmaceutical and Toilet Preparations which previously had been combined. Details for each of these industries are given in the next two tables for 1947-48. However, it should be noted that in order to avoid the publication of confidential information, particulars relating to Industrial and Heavy Chemicals include details for the explosives industry.

INDUSTRIAL AND HEAVY CHEMICALS AND ACIDS (INCLUDING EXPLOSIVES), 1947-48.

(iii) *Raw Materials Used and Production.* The following statement shows the quantities of certain raw materials used and the production in soap and candle factories in Australia for the years 1943-44 to 1947-48 compared with 1938-39:—

SOAP AND CANDLE FACTORIES : RAW MATERIALS USED AND PRODUCTION, AUSTRALIA.

Particulars.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Tallow used .. cwt.	535,511	856,031	859,109	834,057	768,939	893,826
Alkali used ..	229,831	201,992	203,697	160,304	153,036	156,042
Cocoa-nut oil used—refined ..	138,954	74,915	79,299	86,576	57,191	80,518
Soap made (a) ..	1,189,345	1,461,200	1,512,361	1,535,304	1,478,877	1,679,839
Candles made ..	27,459	38,291	23,159	23,194	10,539	13,362

(a) Soap made in all factories including those not classified as "Soap and Candles" factories.

The output for the year comprised the following quantities of soap:—Household, 599,144 cwt.; Flakes and Chips, 48,698 cwt.; Industrial, 60,971 cwt.; Sand, 62,293 cwt.; Toilet, 260,009 cwt.; Shaving (including Sticks and Creams), 9,517 cwt.; Soft, 23,458 cwt.; Liquid (including liquid Shampoo), 84,438 cwt.; Soap Extracts and Powders (including Shampoo Powder), 530,311 cwt. This includes 105,766 cwt. of soap made in establishments not classified as Soap and Candle Factories.

6. *Chemical Fertilizers.*—(i) *Details for each State.* The following table gives particulars of the factories engaged in the manufacture of chemical fertilizers in each State during 1947-48. Details of the consumption, imports and exports of fertilizers will be found in Chapter XX.—"Agricultural Production".

CHEMICAL FERTILIZERS, 1947-48.

Value of production .. £	1,599,998	1,121,412	1,640,607	1,966,799	2,082,876	2,879,497

7. *Iron and Steel Works and Engineering.*—(i) *General.* In 1945-46 the classification of factories was amended to provide for the tabulation in four separate groups of those industries previously included under Iron and Steel and Engineering. The first group (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production of boilers, engines, machines including machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers not elsewhere included.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel.* In the following table particulars are given for 1947-48 for each State for the group Smelting, Converting, Refining and Rolling of Iron and Steel.

SMELTING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL, 1947-48.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.
Number of factories ..	17	12	..	1	1	..	31
Number of persons engaged ..	11,246	(a)	..	(a)	(a)	..	12,503
Value of land and buildings £	2,031,349	(a)	..	(a)	(a)	..	2,379,084
Value of plant and machinery £	4,964,657	(a)	..	(a)	(a)	..	5,670,072
Salaries and wages paid £	5,177,738	(a)	..	(a)	(a)	..	5,771,917
Value of power, fuel, etc., used £	3,440,427	(a)	..	(a)	(a)	..	4,232,728
Value of materials used £	24,744,251	(a)	..	(a)	(a)	..	25,418,776
Total value of output £	39,288,670	(a)	..	(a)	(a)	..	41,932,002
Value of production .. £	11,103,992	(a)	..	(a)	(a)	..	12,280,498

(a) Not available for publication ; figures are included in the total for Australia.

(iii) *Foundries (Ferrous).* Particulars covering those industries engaged in the founding of iron and steel are given for each State for 1947-48 in the following table :—

FOUNDRIES (FERROUS), 1947-48.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Number of factories ..	76	224	16	18	15	..	349
Number of persons engaged ..	2,568	2,617	422	512	478	..	6,597
Value of land and buildings £	436,948	552,715	57,333	49,118	67,137	..	1,163,251

(ii) *Total for Australia.* The increased output of electrical energy in Australia within recent years, referred to in par. 39 below, caused a corresponding demand for electrical equipment. Difficulties, due to war, in obtaining electrical equipment from abroad have been responsible for considerable development in the manufacture of electrical goods and equipment in Australia, as shown in the following table.

ELECTRICAL MACHINERY, CABLES AND APPARATUS : AUSTRALIA.

Items.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Number of factories ..	360	431	475	551	658	732
Number of persons engaged ..	10,666	20,659	21,669	22,825	25,077	27,579
Value of land and buildings £	1,627,183	2,713,999	2,829,443	3,507,375	3,950,804	4,488,206
Value of plant and machinery £	896,553	1,724,045	1,806,169	2,084,018	2,524,818	2,987,993
Salaries and wages paid £	2,031,098	5,710,782	5,857,210	6,301,035	7,455,375	9,454,291
Value of power, fuel, etc., used £	104,594	193,542	190,677	208,729	244,384	291,417
Value of materials used £	3,195,032	7,804,575	7,991,641	8,085,443	10,467,524	14,310,252
Total value of output £	6,954,498	16,346,709	16,892,366	17,789,829	21,996,743	27,891,275
Value of production ..	£ 3,654,872	8,348,592	8,710,048	9,495,657	11,284,835	13,289,606

10. **Railway and Tramway Workshops.**—(i) *Details for each State, 1947-48.* The railway and tramway workshops which form an important item in Class IV. are chiefly State-owned institutions and their development is a reflection of the growth of the railway and tramway systems of Australia. The following table includes, in addition, municipal establishments for manufacturing and repairing rolling stock. Private institutions numbering 9 in 1947-48 have been excluded :—

TRAMCARS AND RAILWAY ROLLING STOCK(a), 1947-48.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.
Number of factories ..	49	25	11	14	22	7	128
Number of persons engaged ..	17,195	6,873	5,358	4,206	3,039	825	37,496
Value of land and buildings £	3,679,641	1,392,840	564,346	1,096,922	569,960	209,799	7,513,508
Value of plant and machinery £	3,966,697	375,743	477,065	1,028,610	497,960	178,945	6,525,018
Salaries and wages paid £	7,016,379	2,587,775	1,699,598	1,603,014	1,071,466	319,170	14,297,402
Value of power, fuel, etc., used £	151,029	64,724	39,053	64,053	41,751	11,016	371,626
Value of materials used £	4,426,750	1,824,810	923,626	881,435	914,522	103,229	9,074,372
Total value of output £	12,987,090	5,168,993	2,959,151	2,804,929	2,436,428	476,456	26,833,047
Value of production ..	£ 8,409,311	3,279,459	1,996,472	1,859,441	1,480,155	362,211	17,387,049

(a) Government and municipal only.

A railway workshop in the Northern Territory is chiefly engaged in making repairs to rolling stock, etc., no new goods being manufactured. Particulars of this establishment are not included in any of the tables in this chapter.

(ii) *Total for Australia.* The following table shows the development of railway and tramway workshops in Australia since 1938-39 :—

TRAMCARS AND RAILWAY ROLLING STOCK(a) : AUSTRALIA.

Items.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Number of factories ..	117	116	116	115	115	128
Number of persons engaged ..	27,310	39,058	37,972	36,962	37,347	37,496

(a) Government and Municipal only.

11. **Motor Vehicles.**—The industries catering for the motor trade are included in Class IV. "Industrial Metals, Machines and Conveyances". In the table below a summary is given of the principal statistics for 1947-48 for each branch of industry associated with the motor trade of Australia.

MOTOR VEHICLES : CONSTRUCTION, ASSEMBLY, REPAIRS, ETC. : AUSTRALIA, 1947-48.

Items.	Construction and Assembly.	Motor Bodies.	Repairs.	Motor Accessories.	Total.
Number of factories ..	55	337	4,082	118	4,592
Number of persons engaged ..	6,902	13,990	29,886	5,210	55,988
Value of land and buildings ..	£ 1,445,261	2,060,236	9,557,873	988,158	14,051,528
Value of plant and machinery ..	£ 821,208	1,228,894	2,843,230	1,026,724	5,920,056
Salaries and wages paid ..	£ 2,815,700	5,287,738	8,726,121	2,054,144	18,883,703
Value of power, fuel, etc., used ..	£ 93,223	124,705	282,037	97,579	597,544
Value of materials used ..	£ 645,070	6,674,612	9,321,832	1,875,859	18,517,373
Total value of output ..	£ 5,821,317	13,567,021	23,350,141	5,118,418	47,865,897
Value of production ..	£ 5,083,024	6,767,704	13,755,272	3,144,980	28,750,980

In the next table similar details are shown on a State basis for these branches combined.

MOTOR VEHICLES : CONSTRUCTION, ASSEMBLY, REPAIRS, ETC., 1947-48.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas. (a)	Australia.

12. Agricultural Machines and Implements.—(i) *General.* Owing to the extensive agricultural activities conducted in Australia and the demand for modern mechanized farm equipment the manufacture of agricultural implements constitutes an important branch of Australian industry. The articles manufactured include a wide range of implements for tillage, seeding and planting and the harvesting of crops. Other farm machinery made includes oil engines, windmills, chaff-cutters and machinery used in the dairying industry.

(ii) *Details for States.* The following table gives details of agricultural implement works in each State for 1947-48 :—

AGRICULTURAL MACHINES AND IMPLEMENTS, 1947-48.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.

Total value of output £	3,403,091	6,604,402	6,589,942	6,701,344	6,717,194	8,397,643
Value of production .. £	1,836,337	3,583,262	3,584,274	3,797,892	3,643,465	4,614,964

13. *Wireless and Amplifying Apparatus.*—The introduction of wireless broadcasting in 1923 gave rise to a new industry in Australia. Early statistical details of the industry are not available as they were grouped together with other electrical apparatus. In 1930–31 a new classification of factories was adopted and “Wireless Apparatus” was shown as a separate industry. The industry is confined mainly to New South Wales and Victoria, but is becoming increasingly important in South Australia. The number of broadcast listeners’ licences increased from 331,128 in 1930–31 to 1,832,816 in 1947–48 and this increase reflects the advancement of the industry during that period. During the war years considerable expansion took place in the industry to meet the requirements of the fighting services and apart from a slight drop in output in 1945–46, this expansion has continued.

WIRELESS AND AMPLIFYING APPARATUS : AUSTRALIA.

Items.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.
Number of factories ..	72	85	89	97	127	134
Number of persons engaged ..	4,828	11,020	10,534	8,709	8,935	9,543
Value of land and buildings £	557,953	895,642	998,470	969,105	1,133,159	1,115,494
Value of plant and machinery £	305,468	613,088	643,914	711,802	587,179	643,732
Salaries and wages paid £	754,302	2,959,291	2,784,985	2,295,866	2,500,401	3,070,098
Value of power, fuel, etc., used £	23,525	68,553	70,055	58,240	62,365	91,072
Value of materials used £	1,355,083	3,379,511	3,445,575	3,446,056	4,169,444	4,919,068
Total value of output £	2,502,338	7,190,028	7,290,352	6,514,933	7,721,018	9,235,861
Value of production .. £	1,123,130	3,741,964	3,774,722	3,610,639	3,489,209	4,224,821

The number of domestic receiving sets assembled in 1947–48 was 333,332 and the number of domestic chassis (unmounted) made was 119,747 compared with 163,821 and 123,655 respectively in 1938–39.

14. *Cotton.*—(i) *General.* Cotton has been grown in Australia since 1860, but never on a very large scale. The average annual quantity of unginned cotton produced during the five years ended 1938–39 was 18 million lb. and slightly under 5 million lb. in the five years ended 1947–48. Arising out of the development in the local manufacture of cotton materials and the further expansion following the outbreak of war in 1939, plans were completed for an extension of the area devoted to the cultivation of this crop, but since the commencement of the Pacific War there has been a definite downward trend. The growing of cotton, which is restricted to Queensland, is referred to in some detail in Chapter XX.—“Agricultural Production”.

(ii) *Ginning.* The ginning and marketing of cotton is controlled by the Queensland Cotton Board. The Board operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly from India, Brazil and the United States of America.

(iii) *Spinning and Weaving.* The recent expansion in the spinning and weaving section of the cotton industry marks an important event in its development. New factories have been established and Australia is now producing an extensive range of

cotton goods, including duck and canvas from cotton or flax, denims, drill, etc., tyre cord and tyre cord fabric. The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are given in the following table for the five years ended 1947-48 in comparison with 1938-39.

COTTON SPINNING AND WEAVING : AUSTRALIA.

Items.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

15. Wool Carding, Spinning and Weaving.—(i) *Details for each State.* The importance of this industry is emphasized by the fact that Australia is the world's chief source of wool and the development of the woollen industry since its establishment at an early period in Australian history is of singular interest. The production consists chiefly of woollen cloth and tweed, worsted cloth rugs, blankets and yarn, all of which have acquired a reputation for purity and durability. The following table gives particulars for 1947-48.

WOOL CARDING, SPINNING AND WEAVING, 1947-48.

(a) Includes Wooll scouring Works in Victoria and Tasmania and Wooll scouring Works and Feltmongeries in South Australia.

16. **Hosiery and Other Knitted Goods.**—(i) *Details for each State.* In addition to the woollen mills there were 420 hosiery and knitting mills operating in Australia during 1947-48. The total number of persons engaged in these establishments was 20,337, of whom 14,160 were females. Details for each State are shown in the following table :—

(iii) *Raw Materials used and Production, 1947-48.* The main raw materials consumed in establishments manufacturing hosiery and other knitted goods during 1947-48 consisted of woollen yarn, 9,761,887 lb; cotton yarn, 8,725,841 lb.; and rayon yarn, 5,227,106 lb. Production comprised 38,346,048 garments, valued at £10,240,160; 1,567,448 dozen pairs of stockings, valued at £4,657,275; and 1,982,097 dozen pairs of socks, valued at £2,769,945.

17. **Tanning, Currying and Leather Dressing.**—(i) *Details for each State.* In Class VII. the most important industry is tanning. Formerly the production of tanneries in Australia was confined to the coarser sorts of leathers, but there are now very few kinds which cannot be produced locally, and an export trade has been built up in some varieties.

21. **Boot and Shoe Making.**—(i) *Boot and Shoe (not Rubber) Factories.* The boot and shoe factories hold an important place both in regard to employment afforded and extent of output. The following table relates to 1947-48 and refers to boot and shoe factories as distinct from those devoted to repairing and bespoke work. It has been necessary to include details of Boot and Shoe Repairing factories in Tasmania, in order to conceal confidential information for that State. Factories engaged in the manufacture of rubber boots and shoes are excluded, being classified under Rubber Goods (including Tyres made); *vide par.* 38.

BOOT AND SHOE (NOT RUBBER) FACTORIES, 1947-48.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas. (a)	Australia.

(ii) *Production of Flour and By-products.* The production of flour by the mills in each State for the years 1938-39 and 1943-44 to 1947-48 was as follows :—

FLOUR-MILLING : PRODUCTION OF FLOUR.

(Tons of 2,000 lb.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938-39 ..	547,162	436,829	84,314	146,262	138,583	19,582	1,372,732
1943-44 ..	496,853	409,190	125,603	149,892	159,799	17,153	1,358,490
1944-45 ..	516,168	393,036	124,473	194,067	161,690	22,534	1,412,868
1945-46 ..	451,895	315,525	90,984	164,986	166,791	22,157	1,218,838
1946-47 ..	541,469	449,170	98,232	202,366	176,727	21,695	1,489,659
1947-48 ..	552,784	501,325	108,022	215,155	197,104	23,753	1,598,143

The 1947-48 production of 1,598,143 tons of flour in Australia was valued at £21,979,405. In addition, 634,403 tons of bran and pollard, valued at £4,655,641, were made. The quantity of wheat ground was 76,926,847 bushels.

23. *Bakeries.*—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on in the year 1947-48 is given in the table below. It should be noted, however, that the details refer only to establishments coming within the definition of a factory, as explained in § 1, par. 1, page 1092. For that reason there is a large number of bakehouses omitted, and consequently the table does not give complete details of the industry. This is true of all other industries covered by the statistics of manufacturing production, but, in view of the omission of such a large number of establishments in this instance, special mention is deemed necessary.

BAKERIES (INCLUDING CAKES AND PASTRY), 1947-48.

(a) Includes confectionery.

24. *Sugar-mills.*—(i) *General.* Sugar-cane is grown in New South Wales and Queensland and particulars of area, yield, etc., are given in extended detail in Chapter XX. "Agricultural Production".

The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Particulars of cane crushed and sugar produced embodied in the following two tables refer to the quantities treated during the years ended 30th June, irrespective of the season in which the cane was grown; consequently the figures relating to cane crushed and sugar produced may differ slightly from those given in Chapter XX.—"Agricultural Production", which relate to harvest years.

(ii) *Details for New South Wales.* The following table gives details of the operations of sugar mills in New South Wales for the year 1938-39, and each year 1944-45 to 1947-48 :—

SUGAR-MILLS : NEW SOUTH WALES.

Items.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.
Number of factories	3	3	3	3	3
Number of employees	212	248	283	297	236
Cane crushed tons	337,038	200,050	166,069	309,655	267,261
Raw sugar produced (94 net titre) tons	45,106	26,423	21,220	39,768	33,560
Molasses produced gals.	1,489,090	1,037,600	1,110,000	1,281,920	(a)

(a) Not available for publication.

(iii) *Details for Queensland.* Particulars relating to the operations of sugar-mills in Queensland are shown in the following table for the year 1938-39 and each year 1944-45 to 1947-48. Particulars of the seasonal distribution of molasses as recorded by the mills are also shown.

SUGAR-MILLS : QUEENSLAND.

Items.	1938-39.	1944-45.	1945-46.	1946-47.	1947-48.
Number of factories	33	32	32	31	32

Sold or used for other purposes	232,049	254,358	423,085	241,045	312,930
Total molasses disposed of	20,286,191	19,124,751	19,353,629	21,783,131	18,891,757

25. *Sugar Refineries.*—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated on in the earlier years coming chiefly from Mauritius and the East. In 1947-48 there were two sugar refineries in the States of Victoria and Queensland, and one in each of the States of New South Wales, South Australia and Western Australia. The quantity of raw sugar treated amounted to 452,468 tons, for a yield of 435,584 tons of refined sugar, valued at £14,715,758.

26. *Confectionery Factories.*—(i) *Details for each State.* The figures for 1947-48 are given hereunder:—

SUGAR CONFECTIONERY FACTORIES, 1947-48.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australi. (b)

(a) Not available for publication.

(b) Excludes Tasmania.

(ii) *Total for Australia, excluding Tasmania.* Particulars of the confectionery industry during the last five years are compared with 1938-39 in the following table. Confectionery establishments in Tasmania have been combined with bakeries in order to conceal confidential information. Production in Australia is more than sufficient to supply local requirements.

SUGAR CONFECTIONERY FACTORIES(a) : AUSTRALIA.

Items.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

Value of power, fuel, etc., used £	97,521	269,996	327,558	260,079	252,046	284,246
Value of materials used £	4,799,515	11,886,635	13,141,842	12,325,758	12,224,225	14,475,402
Total value of output £	7,230,914	16,985,506	19,169,509	17,664,531	18,291,803	21,588,403
Value of production .. £	2,333,878	4,828,875	5,700,109	5,078,694	5,845,532	6,828,755

During the 1939-45 War production of jams and jellies expanded greatly and a high level of output of 171 million lb. was attained in 1943-44. Production afterwards receded but attained a new record of 198 million lb. in 1947-48. The peak output of fruit preserved in liquid also occurred in 1947-48 with 176,273,000 lb., compared with the previous highest level of 161.1 million lb. attained in 1940-41

There has also been a marked development in the production of canned vegetables. In 1938-39 output totalled 10,255,000 lb. but, as a result of the war-time demand by the armed services, production reached the record level of 119,149,000 lb. in 1944-45. However, it has since declined to 46,331,000 lb. in 1947-48.

(iii) *Production.* The following table shows the quantity and value of jams, pickles, sauces and other items manufactured in each State in 1947-48 :—

JAMS, PRESERVED FRUIT AND VEGETABLES, PICKLES AND SAUCES : OUTPUT, 1947-48.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.

Powdered milk	780	1,902	(a)	(a)	..	(a)	2,725

(a) Not available for publication; figures are included in total for Australia. (b) Includes Whole Milk equivalent of cream and butter fat purchased as such. (c) Includes 181 tons of cheese, valued at £18,902, made in establishments not classified as factories.

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXI.—“Farmyard, Dairy and Bee Products”

30. **Meat and Fish Preserving Works.**—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. The substitution of chilled for frozen meat exported has already been referred to in Chapter XIX.—“Pastoral Production”. In recent years there has been considerable expansion in the canning of meat and fish.

MEAT AND FISH PRESERVING WORKS, 1947-48.

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XIX.—“Pastoral Production”.

31. **Breweries.**—(i) *Details for each State.* The following table gives particulars of breweries in each State for the year 1947-48. It should be noted, however, that the data shown below are not strictly comparable throughout, owing to the inability or failure of some breweries to furnish a separate return for each branch of activity. Consequently the figures for some States include details of employment, wages, output, etc., not connected with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt works, aerated waters, etc.

BREWERIES, 1947-48.

The quantity of ale, stout and beer brewed fell from 73.7 million gallons in 1928-29 to 49.8 million gallons in 1931-32, but thereafter increased each year to 109.2 million gallons in 1941-42. Under the Control of Liquor Order which operated between March, 1942 and March, 1946, the production of beer was restricted and consequently output remained static at about 100 million gallons from 1942-43 to 1944-45. Production rose to 125 million gallons in 1947-48 and to 148 million gallons in 1948-49.

The average annual consumption of ale, stout and beer prior to the economic depression of the early thirties exceeded 111 gallons per head of the population : it dropped to 7.32 gallons in 1931-32, increased to 13.76 gallons in 1941-42 and declined again to about 13 gallons during the period of control. In 1947-48 the consumption per head increased to 15.47 gallons.

(iii) *Materials Used and Production.* The table below shows the quantities of raw materials used and the quantity and value of ale, stout and beer brewed in each State during 1947-48 :—

BREWERIES : MATERIALS USED AND PRODUCTION, 1947-48.

(a) Not available for publication; figures are included in total for Australia.

(ii) *Total for Australia.* This industry was among the first to be established in Australia. In 1861 New South Wales had eleven factories and Victoria one. The Australian market has for many years been largely supplied with local manufactures from the imported leaf. Imports during 1947-48 comprised—manufactured tobacco 517,036 lb., cigars 22,140 lb., and cigarettes 2,847,035 lb., and the quantities manufactured in

Australian factories were respectively 19,715,000 lb., 163,000 lb., and 10,147,000 lb. The following tables show the extent of the industry in Australia for the five years 1943-44 to 1947-48 compared with 1938-39:—

TOBACCO, CIGAR AND CIGARETTE FACTORIES: AUSTRALIA.

Items.	1938-39.	1943-44.	1944-45.	1945-46.	1946-47.	1947-48.

LEAF USED AND PRODUCTION ('000 lb.).

Leaf used —						
Australian (stemmed) ..	4,489	4,951	4,658	4,685	3,611	2,924
Imported (stemmed) ..	16,011	19,202	18,704	18,822	23,441	23,675
Tobacco made ..	16,305	18,187	17,448	17,901	20,190	19,715
Cigars made ..	238	134	122	125	139	103
Cigarettes made ..	6,731	8,929	8,740	8,482	10,082	10,147

For many years the production of locally-grown leaf was comparatively small, and manufacturers were dependent on imported leaf for the supply of their raw material. Increased import duties stimulated local production, and the quantity of Australian leaf used by manufacturers rose from 1.2 million lb. in 1929-30 to over 3 million lb. in 1930-31. During the 1939-45 War about 4.7 million lb. of Australian-grown leaf was used annually but in subsequent years the figure fell to the 1947-48 level of 2.9 million lb. In this connexion, see Chapter XX.—“Agricultural Production”.

34. **Sawmills, etc.**—(i) *Details for States.* The most important industry in Class X. is that of sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town, they have been combined in the following tables, together with plywood and bark mills.

SAWMILLS, PLYWOOD AND BARK MILLS, 1947-48.

The sawmill output of native timber, which declined from 740 million super. feet in 1925-26 to the abnormally low figure of 237 million super. feet during the depth of the depression, recovered to 717 million super. feet in 1938-39 and stood at 1,117 million super. feet in 1947-48. Further reference is made to the sawmilling industry in Chapter XXII.—“Forestry”.

35. Cabinet and Furniture Making and Upholstery Factories.—These industries constitute the principal manufactures in Class XI. The following table gives particulars for each State in 1947-48 :—

36. Printing Works.—Printing and bookbinding works rank high in importance among the industries of Australia, and in 1947-48 afforded employment for about 31,000 employees, and paid nearly £10,914,000 in salaries and wages, while the value of output amounted to £34,141,000. The first table below gives particulars of establishments engaged in general printing in each State for 1947-48. These establishments include those engaged in lithographic printing, bookbinding, paper ruling and linotyping and Government printing works. Establishments producing newspapers and periodicals are shown separately in the second table to follow :—

37. **Paper Making.**—Although the paper manufacturing industry has been established in Australia for many years it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred.

Plants producing pulp from eucalypt timber are operating in Victoria and Tasmania whilst in South Australia pulp is being produced from locally-grown softwoods. The production of pulp rose from 6,000 tons in 1938-39 to 88,000 tons in 1946-47, and then dropped slightly to 86,000 tons in 1947-48.

The number of factories operating in 1947-48 comprised two in New South Wales, five in Victoria, one in Queensland, South Australia and Western Australia and two in Tasmania. In the latter State, newsprint, writing and printing papers are produced and in the other States wrappings, other papers and boards. Particulars for this industry are given in the following table for the years 1938-39 and 1943-44 to 1947-48.

PAPER MAKING, INCLUDING PULP MILLS : AUSTRALIA.

39. **Electric Light and Power Works.**—(i) *Details for each State.* The increased demand for electrical energy has been responsible for considerable development in electric light and power works during recent years. Since 1938-39 the production of electric light and power has increased from 4,688 to 8,300 million K.W.H. in 1947-48, or by 78 per cent. Particulars for the year 1947-48 are as follows :—

ELECTRIC LIGHT AND POWER WORKS, 1947-48.

(a) Not available for publication; figures are included in total for Australia.

Since 1938-39, when the output of gas was 21 thousand million cubic feet, production has increased each year and reached 36 thousand million cubic feet in 1947-48.

CHAPTER XXV. WATER CONSERVATION AND IRRIGATION.

A. GENERAL.

§ 1. Introduction.

1. **Special Article.**—The last issue of the Official Year Book (No. 37, pp. 1096–1141) contained a special article “The Conservation and Use of Water in Australia” prepared by Mr. Ulrich Ellis of Canberra. This article, which incorporated basic information supplied by the various Commonwealth and State Departments and other bodies connected with water conservation, presented a comprehensive picture of recent development in this field. The previous issue of the Year Book which contained such a survey was No. 23, 1930, pp. 636–661.

In the present issue much of Mr. Ellis’s article of a statistical nature, including that contained in this chapter in recent years, has been advanced, but for details of general, descriptive and historical matter reference should be made to the original article although the more important sections have been retained, but sometimes in very condensed form.

2. **Geographical and Climatic Factors.**—The opening section of the special article contained a simplified picture of the main geographical and climatic features of Australia, presented in order to enable the reader to appreciate the significance of the Australian water pattern. It is not intended to reproduce this here; but Chapter II.—Physiography of this issue contains considerable detail of the climatic features of Australia with some reference to geographical features, while earlier issues of the Year Book deal exhaustively with these subjects.

3. **Statistical Aspects.**—It should be noted that the basis of recording statistics of water use differs in various States. Therefore, while every attempt has been made to present a uniform statistical picture, it has been difficult to ensure that statistics quoted as between States are strictly comparable in detail. Some steps^a have been taken by State authorities with a view to securing uniformity of statistical data, but until this objective has been achieved allowance should be made for this factor in this Chapter.

The Chapter deals with the conservation and utilization of water on a nation-wide or State-wide basis, and also devotes particular attention to these activities in relation to rural areas and purposes. For information on water conservation and utilization for the purpose of water supply and sewerage in the metropolitan areas, cities and towns of Australia *see* Chapter XV.—Local Government, § 5. Water Supply, Sewerage and Drainage.

4. **Select Bibliography.**—Appended to the special article in Official Year Book No. 37 is a select bibliography containing a list of selected books, reports, papers, etc. dealing with the development of the water resources of Australia and their conservation (*see* pp. 1140–1). The works included, numbering more than thirty, are classified under the headings “General”, “Murray River”, “Sub-surface Water”, “Snowy River”, “Hydro-electricity”, “States” and “Catchments”.

§ 2. Water Resources and their Utilization.

1. **Surface Supplies.**—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. Therefore, it is impossible at present to estimate, with any degree of reliability, the total average annual flow of Australian streams and it has been doubted whether the total annual average flow of all Australian Rivers would exceed 60,000,000 acre feet, a figure small in comparison with the flow of rivers in other continents.

For purposes of comparison the following estimates of mean annual discharge in other parts of the world are stated here in millions of acre feet: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America, 900 (in the aggregate).

2. **Major Dams and Reservoirs.**—The table below lists existing major dams and reservoirs, together with those under construction or projected, as at the commencement of 1950.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet.)	Remarks.
EXISTING DAMS AND RESERVOIRS.				
Hume	Murray River near Albury	1,250,000	106	Part of Murray River Scheme— storage for domestic, stock and irrigation purposes. To be increased to 2,000,000 acre feet.
Miena	Great Lake, Tas- mania	1,125,000	40	Regulates water to Waddamana hydro-electric power station.
Burrinjuck ..	Murrumbidgee River, New South Wales	771,640	247	Storage for irrigation and pro- duction of hydro-electric power.
Lake Victoria ..	Murray River near South Australian border, in New South Wales	551,700	..	Natural storage for irrigation in South Australia.
Waranga	Goulburn River, Victoria	333,400	..	Earthen embankment, 23,800 feet long. Irrigation storage.
Eildon	Upper Goulburn River, Victoria	306,000	..	Rock filled embankment, 2,300 feet long and concrete spillway, 700 feet. Irrigation storage.
Wyangala ..	Lachlan River, New South Wales	303,900	190	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power.
Clark	Derwent River, Tas- mania	243,000	200	Serves Tarrareah hydro-electric power station.
Avon	Nepean River, New South Wales	173,800	230	Part of Sydney water supply.
Glenmaggie ..	Gippsland, Victoria	104,500	100	Storage for irrigation.
DAMS AND RESERVOIRS UNDER CONSTRUCTION OR PROJECTED.				
Eildon	Upper Goulburn River, Victoria	2,350,000	..	Existing dam being enlarged for irrigation storage.
Warragamba ..	Warragamba River, New South Wales	1,678,500	415	Under construction for Sydney water supply.
Jindabyne ..	Snowy River, New South Wales	1,100,000	..	Projected as part of Snowy Mountains Hydro-electric Scheme.
Adaminaaby ..	Euclumbene River, New South Wales	1,000,000	..	" " " "
Somerset	Stanley River, Queensland	724,000	130	Under construction for Brisbane— Ipswich water supply.
Upper Yarra ..	Yarra River, Vic- toria	110,000	270	Under construction for Melbourne water supply.

3. **Irrigation.**—(i) *History.* The history of irrigation in Australia commenced in Victoria after the droughts of 1877 and 1881, when it became recognized that the northern plains could be developed only with water artificially supplied. Thereupon, the Government began the systematic regulation of north-flowing streams. George Chaffey and his brother (who were successful irrigationists in California) were invited to investigate the possibilities of the Murray River from Echuca to Renmark. The Chaffey brothers later established irrigation settlements at Mildura (Victoria) and Renmark (South Australia). Though their efforts were at first clouded with difficulty and misfortune, the possibilities of irrigated culture in these areas were proved beyond doubt.

The Irrigation Act passed by the Victorian Government in 1886 influenced the whole future of water development in Australia. This Act vested in the Government the right to use water in any stream, lake or swamp; provided that no riparian rights could be established which might prevent the use of water for irrigation; authorized the construction of Government works; and provided finance for irrigation trusts elected by the people to conduct local schemes. Similar legislation followed in other mainland States.

(ii) *Extent and Nature of Irrigated Culture.* About half of Australia's irrigated acreage is now in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In these areas served by the Murray and its tributaries irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes.

Approximately half of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where fodders and pasture are served. Irrigation schemes have not been developed in Tasmania or the Northern Territory.

With the expansion of markets for primary products after the 1914-18 War, the irrigated acreage has gradually extended and is now about four times as large as in 1917. The following table shows the area of land irrigated in each State during the years 1936-37 to 1941-42 and 1945-46 to 1948-49 :—

AREA OF LAND UNDER IRRIGATED CULTURE.
(Acres.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.

Total ..	576,206	722,968	91,417	48,185	25,381	9,563	533	1,474,253

(a) Subject to revision. (b) Includes tobacco, 1,453 acres. (c) Includes lucerne for grazing and cutting, 33,008 acres. (d) Includes fallow land. (e) Includes lucerne fed off.

(iii) *Irrigation Trends.* With more clear knowledge about the limits of water availability, new trends in irrigation are appearing. These include the improvement of irrigation techniques in established areas, a growing appreciation of the benefits and necessity of irrigation in humid and sub-humid areas with a flush annual rainfall, the use of irrigation to stabilize the stock industries, especially on an "extensive" basis, consideration regarding the provision of weirs to prevent the entry of salt water, the increasing quest for cheap electric power to aid pumping operations for stock, domestic and irrigation purposes, and an increase in the extent of spray irrigation. These developments are described more fully in the previous issue of the Year Book, page 1099.

(iv) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following: High water tables due to the application of water to land where no natural drainage lines exist, or where drainage lines are too small to cope with extra water; presence of salt in semi-arid soils, resulting in surface accumulation; salinity of water, which makes it unsuitable for human beings, stock and plant life; adverse reactions of semi-arid soil types to increasing quantities of water which affect the sub-soil; increasing density of stock on irrigated pastures which leads to the spread of such diseases as foot rot and fluke in sheep, and mastitis and contagious abortion in cattle; and growth problems affecting plants and trees.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations:—Merbein (Victoria), horticultural problems, mainly vines, soils, watering and diseases; Griffith (New South Wales), mainly citrus and vegetable problems; Deniliquin (New South Wales), pastures; Werribee (Victoria), stock diseases. These stations are in close contact with the settlers. In the maintenance of Merbein and Griffith Stations the Commonwealth is assisted, financially or otherwise, by the New South Wales Water Conservation and Irrigation Commission and private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established.

An important step forward in agricultural development in Australia has been taken in the creation of the Irrigation Research and Extension Committee with head-quarters on the Murrumbidgee Irrigation Areas. The scheme aims to provide the best possible service to farmers. It is regarded as an experiment in organization and regional administration which may have far-reaching effects. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

The Committee is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. Introduced in the present form in 1947, the scheme is to operate initially for a period of seven years.

4. *Preservation of Catchments.*—As water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize

effects of floods, overstocking, bush fires, and destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

The Victorian Parliament passed the Soil Conservation and Land Utilization Act in 1947 to establish an authority to control land on catchments, to determine whether such land shall be used for forestry, grazing or other purposes, and to delegate to other authorities the responsibility of carrying out necessary works to maintain catchment efficiency. The Act was amended in 1949 and operated from 19th February, 1950. In New South Wales a Conservation Department was established in 1944 under single Ministerial control, linking the Water Conservation and Irrigation Commission, the Soil Conservation Service (established in 1938) and the Forestry Commission. In Queensland the Bureau of Investigation has been established under the Land and Water Resources Act of 1943 designed to bring about the co-ordinated development of land and water resources. Other States are also giving attention to this problem.

5. **Hydro-electric Power.**—Australia's main coal deposits lie within the well-watered regions, but with accelerated industrialization, increased interest is being displayed in the development of hydro-electric power for rural electrification, for stabilizing inter-connected systems, for contributing to metropolitan peak demands, and for general industrial and domestic purposes. On the mainland it is usual to allot water for irrigation purposes, combining this with hydro-electricity to whatever extent is possible. During summer, when irrigation is proceeding, there is ample discharge for power, but in the non-watering period the main objective is to store water.

Hydro-electric possibilities are confined almost exclusively to the eastern coastline of the mainland and to Tasmania. In 1932 the Power Survey Sectional Committee of the Standards Association of Australia estimated water power resources to be 4,750,000 h.p. of which 3,500,000 was located in Tasmania. Authorities are now inclined to believe that mainland sources could contribute approximately 2,000,000 h.p., bringing the total to 5,500,000. Recent investigations concerning the potential use of the Snowy River may increase the estimate further. The Committee also estimated that the water power potential in Papua and New Guinea was approximately 20,000,000 h.p.

It has been estimated that the total capacity of generators installed in Australia amounted to 2,286,008 k.w. at 30th June, 1949, of which generators with capacity of 272,763 k.w. were driven by water power. The total production of electric energy in Australia amounted to 9,053 million k.w.h. for the year 1948-49, of which 1,378 million k.w.h. was derived from hydro-electric stations.

Hydro-electricity is generated in all States except South Australia and Western Australia and the Northern Territory. Water is the sole source of electric power in Tasmania, all other States depending largely on steam and oil.

6. **Sub-surface Supplies.**—(i) *General.* While a more or less complete general picture of the available and potential surface water resources exists, much remains to be done with regard to the location and development of sub-surface supplies, although the extent and potentials of the artesian basins—particularly the Great Artesian Basin—have been fairly accurately determined. In view of the importance of sub-surface waters as the basis of settlement over large areas of Australia, it is necessary to devote particular attention to these resources.

The use of sub-artesian supplies is also extensive and more development is possible, but the shallower groundwater supplies, particularly along alluvium valleys and coastal sandbed areas, have not been investigated and developed in any degree, except in a few localities. Increasing efforts are being made to locate and develop sub-surface supplies and comprehensive hydrological surveys have been initiated in many parts of Australia for the purpose of locating, further developing and utilizing these waters.

A good deal of investigational work has been carried out and many data have been recorded in respect of artesian basins, and the decreasing flow therefrom; and this information is being progressively supplemented, as is also the information recorded in respect of sub-artesian supplies.

(ii) *Definitions.* The term "artesian" is applied when the water contained in an aquifer and tapped by a bore hole rises and flows under hydro-static pressure above ground level. When a water-bearing stratum is intersected by a bore hole, and the water rises above the level at which it is tapped but does not rise sufficiently high to flow naturally above surface level, it is termed "sub-artesian".

The term "ground water" is generally applied to shallower waters found in alluvium or sand beds not confined between impervious strata, and these waters usually do not rise in a bore hole above the level at which they are met.

(iii) *Artesian and Sub-artesian Supplies.* Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 550,000 square miles, comprising about 350,000 in Queensland, 76,000 in New South Wales, 100,000 in South Australia and 24,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal :—

PRINCIPAL WATER-BEARING BASINS : AUSTRALIA.

Name.	State.	Geological Age.	Area.	Depth of Water.
			Square Miles.	Feet.
Great Artesian ..	Queensland, New South Wales, South Australia and Northern Territory	Cretaceous-Jurassic ..	550,000	Up to 7,000
Murray ..	Victoria, New South Wales, and South Australia	Miocene	107,000	100 to 900
Torrens ..	South Australia ..	Recent Pleistocene ..	4,000	Up to 600
Coastal Plain ..	Western Australia	Recent Jurassic ..	10,000	200 to 2,500
Adelaide ..	South Australia ..	Recent Oligocene ..	1,100	100 to 500
Gippsland ..	Victoria ..	Pleistocene-Oligocene	1,800	200 to 1,800
Port Phillip ..	Victoria ..	Pleistocene-Oligocene	300	Up to 600
Euccla ..	Western Australia, South Australia	Pliocene-Miocene ..	68,000	300 to 2,000
North-west ..	Western Australia	Tertiary Permian ..	40,000	400 to 4,000
Collie ..	Western Australia	Permian	500	..
Desert ..	Western Australia	Permian	130,000?	200 to 3,000

More than 3,000 artesian bores have been constructed within the Great Artesian Basin and the daily free discharge from all bores continuing to flow in Australia has recently been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life; while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts a considerable amount of irrigation is carried out from shallow ground water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, and in respect of the Great Artesian Basin, for example, although only a small proportion of the actual quantity of water stored has been drawn off, much of the original pressure has been lost, the hydraulic gradient has been steepened, and most of the free flow has been lost for all time. Nevertheless, although it has been said that eventually all bores within the Great Artesian Basin would cease to flow naturally and that the water would have to be pumped to the surface for use, it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject see Official Year Book No. 37, pp. 1103-4.)

The Queensland Government appointed a Committee to investigate various aspects relating to the Great Artesian Basin, with particular reference to the problem of diminishing supply, and an interim report was published in 1945 and its final report is being prepared.

(iv) *Ground Water.* Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes, and their development is receiving considerable attention. The most notable ground water scheme is that conducted by the Hunter District Water Board where ground water from the Tomago sandbeds near the mouth of the Hunter River, New South Wales is used to supplement water storages fed from surface sources. For further information on ground water see Official Year Book No. 37, p. 1104.

(v) *Windmills.* In the development of water resources—and especially underground water—windmills have played a substantial part. The bulk of windmills (an unofficial estimate has assessed the number in use at about 250,000) are installed on farms and stations for watering live-stock, though they also serve other industrial and domestic purposes. For further information see Official Year Book No. 37, page 1105.

7. *Industrial, Metropolitan and Country Town Supplies.*—Details relating to urban water supply systems will be found in Chapter XV.—"Local Government" of this Year Book (pp. 682-694).

§ 3. National and Interstate Aspects.

1. *Constitutional Phases.*—As the government of Australia is conducted under a Federal system, and as the Commonwealth Constitution makes special reference to water problems, both the Federal and the State Governments have an interest in the control and conservation of water. As main responsibility for control of water resources resides in the State governments, and as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945 national aspects of water conservation and use were emphasized. The report recommended the adoption of an all-Australian plan, having the assent of the various governments, to obviate lack of co-ordination, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

The Irrigation Production Committee was established in 1938, pursuant to a resolution by the Australian Agricultural Council. The purpose of the Committee was to carry out comprehensive investigations into the various agricultural activities of lands irrigable by the River Murray and its tributaries, with a view to co-ordinating developmental activities on such lands. Shortly after its establishment, the work of the Committee was interrupted by war conditions necessitating diversion of its staff to other

problems of more immediate importance. In August, 1945, the Australian Agricultural Council decided to resuscitate the Irrigation Production Advisory Committee, and this decision was confirmed by the Premiers' Conference in January, 1946. The functions of the Committee were subsequently defined by the Agricultural Council as follows:—(a) to prepare for the consideration of the Australian Agricultural Council, or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands; (b) to undertake long-term co-ordination of land utilization in irrigable areas served by the River Murray and its tributaries, this involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary. The Committee was originally representative of only the Commonwealth Department of Commerce and Agriculture and of the Departments of Agriculture and the Water Conservation and Irrigation Authorities in the States of New South Wales, Victoria and South Australia. The membership of the Committee was subsequently extended to include representatives from other States desiring to be represented. Tasmania has not so far sought representation on the Committee. In addition to representatives of the Commonwealth Department of Commerce and Agriculture, the Committee at present includes, from each State represented, one representative from the Department of Agriculture and one representative from the State authority controlling water conservation and irrigation. The chairman is the Commonwealth Director-General of Agriculture.

2. *Murray River Scheme.*—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland, and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (1,050 miles), the Darling (1,760 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,400,000 acre feet; Murrumbidgee River, 2,600,000 acre feet; Goulburn River, 2,250,000 acre feet; Darling River, 2,150,000 acre feet; and Ovens River, 1,200,000 acre feet.

(ii) *History of Control.* Discovered in 1824, the Murray played a substantial part in early pastoral settlement. Navigation was the predominant initial interest, permitting cheap transport of supplies and produce. Irrigation settlements which developed after 1887 commenced a new era in the River's history. In 1914 the three State authorities whose territories were served by the River agreed that joint control was necessary, and the following year the Governments of the Commonwealth, New South Wales, Victoria and South Australia entered into the River Murray Agreement and the Parliaments concerned subsequently passed ratifying legislation. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(iii) *River Murray Waters Agreement.* Under the Agreement construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet per month in the winter months to 134,000 acre feet per month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in the locks, and evaporation losses other than in the lakes at the Murray mouth; together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation.

Under the original agreement the major works comprised two large storages—one on the Upper Murray above Albury (the Hume Dam) and the other at Lake Victoria in New South Wales near the South Australian border. In addition, provision was made for a number of weirs and locks along the Murray and Murrumbidgee Rivers. In 1934 the Agreement was varied to provide for the construction of a diversion weir at Yarrawonga (145 miles downstream from the Hume Dam), and the provision of barrages at the mouth of the River to prevent the entry of salt water. The amendment also limited the original proposal for 26 weirs and locks on the Murray and 9 on the Murrumbidgee to 13 on the Murray and 2 on the Murrumbidgee. At the same time it was agreed that the Hume Dam should be completed to a capacity of 1,250,000 acre feet with provision for later increase to 2,000,000. As a result of the amendment, navigation is limited to a route of 600 miles, extending from the mouth to a point some 50 miles above Mildura. All works authorized under the amended Agreement (except the enlargement of the Hume Dam to 2,000,000 acre feet) have been carried out at a total cost of £12,000,000, of which approximately half represents the cost of the Hume Dam. Expenditure has been shared equally by the Commonwealth and the three States.

At a Ministerial Conference held in October, 1948, the four parties to the Agreement resolved that the enlargement of the Hume Reservoir to 2,000,000 acre feet and the doubling of the capacity of the inlet channel to Lake Victoria storage should be proceeded with immediately at a further estimated cost of £2,000,000. The resolutions of the Conference were subsequently incorporated in an amending agreement which has now been ratified by legislation by all parties. Under the terms of the amending agreement, the States of New South Wales and Victoria are required to report annually on the condition of the Hume Reservoir catchment and to take any special action recommended by the Murray River Commission in regard thereto. The River Murray Commission has also power to initiate proposals for the better conservation and regulation of the waters of the Murray, and may cause surveys and investigations concerning such proposals to be undertaken.

At the Conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, Conference decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 400,000 acre feet per annum would be added to the Murray River. Although a minimum storage of 250,000 acre feet would be necessary to regulate this additional water, Conference considered it would be unwise to limit to this capacity any storage which might be constructed, and felt that a storage of not less than 1,500,000 acre feet should be provided, in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

It was agreed, therefore, to ask the River Murray Commission to investigate the position and to determine the optimum size of the proposed storage it considered should be constructed and also its location. Investigations into the hydrographic aspects of the maximum practicable regulation of the waters of the Upper Murray, including diversions from the Snowy River, have been undertaken and the results are now under consideration by the Commission.

The total estimated quantity of water diverted in 1948-49 for irrigation from the Murray and its tributaries (under the River Murray Agreement) was as follows (in acre feet): New South Wales (748,800); Victoria (1,653,600); South Australia (184,900); a total of 2,587,300 acre feet.

(iv) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Dam, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 106 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately 1 mile. Ultimate plans include provision for hydro-electric generation, and preliminary works associated with the construction of the power station are now in hand. Attention is also being given to the completion of the dam to its

designed capacity of 2,000,000 acre feet and also to the enlargement of the inlet channel to Lake Victoria, necessary to permit greater storage of periodic flood flows of short duration.

The Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction; and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet per second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet per second, and is designed to serve 270,000 acres. Only a portion of both these areas will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage was completed in 1928 with a capacity of 551,700 acre feet and a surface area of 27,670 acres. The water released from Lake Victoria is used by the South Australian settlements.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 771,640 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 306,000 acre feet (now being increased to 2,350,000 acre feet); Waranga (Goulburn), 333,400 acre feet. No storages exist on the Murray in South Australia. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems.

(v) *Production.* Irrigated production in the River Murray basin is mainly in the form of wine, dried fruits, fresh fruits, dairy produce, wool, fat lambs, rice, vegetables, poultry, eggs and pigs. The value of production from these areas has been estimated at about £19,000,000 a year, apart from the value added by processing or manufacture. The River Murray Commission estimates that without irrigation the annual production of these areas would not have exceeded £2,000,000 a year.

3. *New South Wales-Queensland Border Agreement.*—The Border Streams Agreement between New South Wales and Queensland, effective from 1st July, 1947, provides for the construction of works on portions of the valleys of the Barwon, McIntyre and Dumaresq Rivers, forming part of the boundary between the two States, on the basis of equal partnership in respect of works expenditure and use of water. The catchments (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. The scheme provides for a major dam on the Dumaresq, near Mingoola, 15 miles upstream from Texas, with a storage capacity of 120,000 acre feet, together with 12 weirs and 4 regulators, at an estimated cost of £1,140,000. Investigations suggest that 70,000 acres close to the storage are suitable for irrigation.

Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry, is being examined. A Commission to carry out the Agreement has been appointed.

4. *Snowy Mountains Hydro-electric Scheme.*—(i) *General.* Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee, representative of the Commonwealth and the States of New

South Wales and Victoria, in 1947 and 1948; and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949, passed the Snowy Mountains Hydro-electric Power Act (No. 25 of 1949) setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them in a westerly direction, to use their potential power for the generation of electricity and then discharge them into the Murrumbidgee River systems for use in the irrigation areas. The proposals provide for the generation of $2\frac{3}{4}$ million kilowatts of power. This is the equivalent of the total existing output of all thermal and hydro-electric stations in Australia to-day. In addition, a further 2,100,000 acre feet of water per year, equal to almost four times the amount at present available to the great Murrumbidgee irrigation areas, will be provided in the proportion of 700,000 and 1,400,000 acre feet per year to the Murray and Murrumbidgee valleys respectively.

The scheme will be constructed in two separate sections, the first being known as the Snowy-Murray system, where the water is to be diverted by tunnel from a large dam across the Snowy River at Jindabyne, to the Swampy Plains River in the Murray Valley; and the second as the Snowy-Tumut system, the water in which will be diverted by tunnel from a dam across the Eucumbene River—a tributary of the Snowy—at Adaminaby, to the Tumut River, a tributary of the Murrumbidgee. The whole scheme will involve the construction of:—7 major dams (with a total storage capacity of approximately $4\frac{1}{2}$ million acre feet); 16 power stations; 86 miles of tunnels varying in diameter from 20 feet to 45 feet—one projected tunnel 35 miles long under the Alps will be one of the largest in the world; nearly 500 miles of racelines at high elevations.

The total expenditure is estimated at £225,000,000 including £100,000,000 for transmission lines. The scheme will form the greatest engineering and developmental work ever undertaken in Australia and one of the major engineering projects of the world.

(ii) *Snowy Mountains Hydro-electric Power Act 1949.* The Snowy Mountains Hydro-electric Authority is constituted by a Commissioner: he is assisted by two Associate Commissioners. The functions of the Authority are defined as:—(i) to generate electricity by hydro-electric works and (ii) to supply it to the Commonwealth for defence purposes and for use in the Australian Capital Territory. Power not required for these needs may be sold to the States of New South Wales and Victoria, in the proportion of two-thirds to one-third, at a price to be determined. The Act gives the Authority wide powers to carry out its functions.

(iii) *Work and Organization of the Authority.* Under the Commissioner the organization is divided into three main divisions, viz., a Civil Engineering Division, an Electrical and Mechanical Engineering Division and an Administrative Division.

The Authority came into being with the appointment of the first Commissioner on 1st August, 1949.

Since that date the Authority has:—

1. Established temporary head-quarters in Sydney. The permanent head-quarters will be at Cooma—present population, 2,500—on the Monaro High Plains. Work was begun in November, 1949 on erection of cottages, hostels, works buildings, etc.
2. Recruited technical and administrative staff of nearly 300 officers of whom more than 60 are engineers.
3. Recruited a labour force of over 1,000.
4. Enlisted the services of State Authorities, e.g. the Department of Main Roads (N.S.W.) and the Department of Public Works (N.S.W.) and private contractors to supplement its own efforts.
5. Started detailed investigations, surveys and preliminary field work mainly on (a) the reconstruction of existing roads and the provision of new roads into working points, (b) the provision of accommodation in the construction area, (c) building up and mechanizing the construction forces so that they will be able to start on the permanent structures when investigations and designs are sufficiently advanced.

Note in reference to the
high level basins in N S W

These areas of pressure water may be continuous, in great measure, with the upper or suspended aquifers of the Great Australian and Murray River Basins, but to what extent of overlap with the main basins is not known — except that the history of boring reveals, practically in every case, the existence of a thin bed of water above the deep water of the main basin.

(iv) *Development of Power.* It is anticipated that the first instalment of power, estimated at approximately 60,000 kilowatts, will be available within four to five years. Additional power, bringing the figure to about 150,000 kilowatts, should be available in six to seven years. This will be followed progressively by larger blocks of power as the work proceeds.

B. STATES AND TERRITORIES.

§ 1. Australian Local Pattern of Water Conservation and Use.

From the foregoing section it is obvious that water conservation and use has both a national and a local aspect. The following survey indicates the local pattern of water resources and the steps taken by State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water for the stock industries (mainly underground sources), and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains to hydro-electric generation almost exclusively. The Northern Territory is primarily concerned with stock supplies and the safeguarding of long stock routes.

§ 2. New South Wales.

1. *General.*—(i) *Rainfall and History.* In the previous issue of this publication (page 1110) information on the pattern of rainfall and the history of irrigation in New South Wales preceded the description of water conservation and use in that State, but it has now been omitted. Chapter II.—Physiography of this issue, however, contains particulars of climatic conditions in each State.

(ii) *Administration.* Under the amendment of the Irrigation Act, made by the Conservation Authority of New South Wales Act, 1949, which came into force on 1st July, 1949, the Water Conservation and Irrigation Commission of New South Wales now consists of three members appointed by the Governor, one of whom is appointed as Chairman. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, and a farm water supply scheme.

Under the Water Act the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Crown. A system of licences also operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Agreement ratified by Acts of both States in 1947, see page 1157 *ante*.

2. **Schemes Summarized.**—(i) *Location and Type.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam on the Lachlan, another tributary. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie, Namoi and Hunter Rivers. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including Irrigation Areas, Irrigation Districts, Water Trust Districts, and Flood Control and Irrigation Districts. There are five Irrigation Areas: The Murrumbidgee Irrigation Areas consisting of 392,654 acres served with water through a channel system off-taking from the river at Berembend Weir; the Coomealla Irrigation Area of 35,450 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,550 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee and the Tullakool Irrigation Area of 16,593 acres supplied from the Edward River at Stevens Weir. All these areas are administered by the Commission, and details of the various schemes are given in sub-section (iii) hereinafter.

(ii) *Works.* The capacities of the main storages (in acre feet) are :—

Murray:—Half share of Hume Dam, weirs and locks to Wentworth (736,420); Stevens Weir, Edward River (7,165).

Murrumbidgee:—Burrinjuck Dam (771,640); Berembend Weir (10,000); Maude Weir (6,740); Redbank Weir (7,360).

Lachlan:—Wyangala Dam (303,900); Lake Cargelligo (29,435); Jemalong Weir (1,790); Lake Ballyrogan (109,000)—works almost complete

Water from the Hume Dam is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla areas, for domestic and stock supply and irrigation in the Berriquin, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. A balance storage at Lake Cargelligo conserves water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplies the districts of Jemalong and Wyldes Plains, serving an area of 223,930 acres. Wyangala is now producing hydro-electric power. Proposals for future development include provision of a head storage at Belubula River, the construction of a balance storage of 108,000 acre feet at Ballyrogan (now almost complete), and development by licensed divisions.

The approximate total length of channels (including main canals) in New South Wales is 2,507 miles. The approximate length of drains and escape channels is 903 miles, and approximate total length of pipe lines is 9 miles, making a grand total of 3,509 miles of channels and pipe lines, etc.

(iii) *Extent of Systems and Nature of Irrigated Culture.* The following table shows the areas of the various irrigation systems and the areas under irrigated culture in New South Wales during 1948-49, the latter according to the nature of irrigated culture.

**AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE :
NEW SOUTH WALES, 1948-49.

(a) Particulars not available.

3. **Murrumbidgee Irrigation Areas.**—(i) *Description.* These areas comprise about a third of the State's irrigated acreage and in 1948-49 received 257,049 acre feet of the total water allocated for stock, domestic supply and irrigation (812,766 acre feet). They are served by the Burrinjuck Dam (capacity 771,640 acre feet), 40 miles north-west of Canberra, on the Murrumbidgee. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where rainfall exceeds 60 inches. Flow for the irrigation districts is supplemented by unregulated flow below the dam from the Tumut River. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation is supplied for the Irrigation Districts of Tabbita, Benerembah and Wah Wah and the flood irrigation districts of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during

the September-April irrigation season. It passes along the river channel to Berembd Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet per second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate 840 miles and drainage channels 810 miles.

In addition 380 miles of supply channel run through adjacent irrigation districts in which the water supply is operated and maintained by the Commission, but land transactions are not under its control. The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations with a sparse population.

Population was 12,000 in 1923, 15,000 in 1929 and 20,000 at the 1947 Census. The population of the Yanco district (with Leeton as the centre) was then 9,000; and the population of the Mirrool Area (with Griffith at the centre) was 11,000.

(ii) *Administration.* The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas, also the distribution of electricity throughout those areas. Other local government services, including town water supply, are provided by Shire Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1949 was 346,455 acres, including 46,532 held for short lease grazing, agriculture, etc.

(iii) *Production.* Since the scheme was inaugurated in 1911 the value of total production has aggregated approximately £47,000,000. During the year ended 30th June, 1949, production was valued at £3,742,000. Live-stock contributed £438,000, (comprising sheep, £369,000; cattle, £39,000; pigs, £30,000); wool, £408,500; and dairy products, £72,800.

Rice (£843,900), wheat and oats (£585,000) and other crops (£1,300) contributed a total of £1,430,200. Horticulture accounted for £1,016,200, comprising almonds, apricots, citrus, drying grapes, table grapes, wine grapes, figs and olives, peaches and nectarines, pears, plums and prunes, quinces and apples. The greatest individual contributions were made by grapes, £285,700, peaches and nectarines, £190,000 and citrus, £206,000.

The total value of all vegetables was £309,500, including root crops, £165,000, tomatoes, £56,000, peas and beans, £33,600, cabbages, cauliflowers, onions and other products. A total of £66,800 represented the value of miscellaneous products.

Rice growing was initiated in 1924. Since then aggregate production has been 878,300 tons valued at £9,800,000. In 1948-49 the acreage sown was 30,865, and the quantity of water delivered was 177,299 acre feet. Water supplied for rice represents about two-thirds of the total delivered in the areas and a fifth of the water artificially supplied for irrigation in New South Wales. Before the war the rice crop was more than sufficient for Australian requirements. During and after the war the area planted was increased to the limit of water available. Rice has also been grown in the adjoining districts of Benerembah and Tabbita and in each of the years 1944, 1945 and 1946 some 4,000 odd acres were sown by the Water Conservation and Irrigation Commission at Wakool as a war-time project. Approval was given for some rice to be grown by individual landholders within Wakool Irrigation District during the 1948-49 season: this arrangement is of a temporary nature only and is not expected to continue beyond the 1951-52 season. On Tullakool Irrigation Area, however, rice growing is expected to become a regular feature of primary development there; 1,753 acres were sown during the 1948-49 season.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle 300,000 bushels of fruit per year (compared with 54,600 in 1927-28). Aggregate sales turnover of the Leeton cannery in the past five years was over £1,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. *Other Irrigation Areas.*—The Curlwaa, Coomealla, Hay and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for operation and maintenance of works to supply water at rates determined by the Commission.

Curlwaa Area, on the Murray near Wentworth, consists of 10,550 acres of which 2,143 acres comprised irrigated holdings at 30th June, 1940. Production consists of dried vine fruits, deciduous fruits and fodder crops of a total estimated value, in 1948-49, of £124,326.

Coomoalla Area, 9 miles upstream from Curlwaa, comprises 35,450 acres of which 3,970 acres are occupied in the developed portion. Other land in the undeveloped parts is leased for grazing. Production consists of vines, citrus and lucerne of an estimated value, in 1948-49 of £203,117. Vines account for 2,470 acres, citrus 237, and lucerne 31. Works are now under construction to provide 100 new farms for ex-servicemen.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which 1,122 acres are occupied as irrigated holdings. Annual production, valued in 1948-49 at £19,000, comprises dairy products, fat lambs, sheep, wool and fodders.

5. Irrigation Districts.—These Districts are set up under the Water Act for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts as the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—*Murray River*: Wakool District (completed) 486,282 acres, Berriquin Provisional District (almost complete) 651,017 acres, Deniboota Provisional District (in progress) 303,064 acres, Denimein Provisional District (in progress) 157,150 acres, Jernargo Provisional District (domestic and stock supply only—works not yet commenced) 130,850 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 88,651 acres; *Murrumbidgee River* (completed): Benerembah District 122,010 acres, Tabbita District 6,046 acres, Wah Wah Provisional District 576,295 acres; *Lachlan River* (completed): Jemalong and Wyldes Plains District 225,196 acres; total 2,746,561 acres.

Since the completion of the Hume Dam several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the five million acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is water rights are allotted to holdings on the basis that only a portion of each holding (one acre in ten or twelve, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin and Wakool Districts is diverted through a main canal which will be 100 miles long when completed. At 30th June, 1949, 75½ miles had been constructed to those districts and a further length was under construction in the Deniboota District. Off-take capacity is 5,000 acre feet per day. Ultimately the water will serve Deniboota and other districts for which works have yet to be constructed.

Wakool, with 340 miles of channel, contains 202 holdings and it is expected that the area developed by irrigation will comprise about one acre in 13 of the total area. The total area irrigated in 1948-49 was about 39,000 acres and water supplied was 62,384 acre feet. Crops comprised fodders, pastures, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and it is expected that the proportion of total area to be developed for irrigation will be considerably higher than in the case of Wakool. Total irrigated acreage was 120,074 at the 30th June, 1949. Sheep and wheat growing are main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1948-49 season for irrigation was 56,947 acre feet, and the area irrigated was 55,424 acres, including rice and other cereals, pastures and fodder crops. The estimated value of production, included in the amount (viz., £3,742,000) for the Murrumbidgee Irrigation Area, was £690,900, including wool, live-stock, wheat and oats and rice.

For the same season 7,288 acre feet of water was supplied from the Lachlan River to irrigate a total area of 9,388 acres within the Jemalong and Wyldes Plains Districts. The total estimated value of production was £501,200, including wool and lambs £443,900, calves and pigs £23,650, wheat, oats and other crops £42,400 and lucerne £52,800.

6. **Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.**—The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted; the area in acres of each district is shown in parenthesis :—*Murray River* : Tuppall Creek (78,080), Bullatole Creek (68,320), Little Merran Creek (157,440), Poon Boon (32,985), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River* : Yanko, Colombo and Billabong Creeks (1,001,210); *Lachlan River* : Torrigan, Muggabah and Merrimajeele Creeks (170,240), Condobolin West Weir (4,480), Marrowie Creek (295,040), Ulonga (71,655), Micabil Weir (11,500); *Miscellaneous* : Algudgerie Creek (9,760), Nidgerie Creek (46,880), Great Anabranche of Darling River (995,200), Collarenebrri Water Supply (88), making in all a total area of 2,945,068 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parenthesis) :—*Hunter River* : Blairmore (511); *Murray River* : Bama (3,446), Goodnight (1,167), Bungunyah-Koraleigh (1,804), Glenview (2,751), Brangan (4,933); *Darling River* : Pomona (1,241), making in all a total area of 15,853 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres) was constituted in 1945, being the first of its kind. Its purpose is to provide flood irrigation for 140,000 acres on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 49 holdings. Another district (Medgun near Moree in the North-West) is in operation. Its total area is 272,800 acres, but particulars of the area that will benefit from flooding are not yet available.

7. **River and Lake, and Farm Water Supplies.**—During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation has increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in lean months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and financial assistance is made available to aid individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. **Underground Water.**—Extensive use is made of artesian, sub-artesian, and shallow underground water. Eighty thousand square miles in the north and western portions are covered by the Great Artesian Basin. Eighty Bore Water Trusts and twelve Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover nearly five million acres and water is distributed through 3,285 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1949 was 903 and the estimated total daily flow from 566 flowing bores was 61,411,000 gallons. The estimated flow in 1914-15 was 99,350,000 gallons per day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet) which also has the greatest flow, namely, 1,115,360 gallons per day. Of the total number of bores sunk, 222 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Trusts.

Since 1912 the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1949, the total constructed by the Commission's plants was 4,101 and their average depth was 295 feet.

9. **Future Programme.**—The programme of post-war development already in hand envisages expenditure of at least £30,000,000 spread over a period of fifteen years from the date of its commencement and includes the provision of eighteen dams and storages, eight diversion weirs, flood mitigation and river protection works in various parts of the State. Construction has been commenced on head storages at Keepit on the Namoi, Glenbawn on the Hunter and Burrendong on the Macquarie. A balance storage at Ballyrogan on the Lachlan is almost complete. The Hunter River development concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. Total estimated storage of all proposed new storages is 5,500,000 acre feet.

10. **Hydro-electricity.**—The largest hydro-electric installation in New South Wales is that located at Burrinjuck Dam on the Murrumbidgee River. It consists of two power stations of 10,000 k.w. each, the first of which commenced operation in 1929. High tension transmission lines connect these plants with the major inter-connected system of New South Wales at Goulburn and Canberra. The output of the plant is dependent on the release of waters for irrigation purposes.

The Nymboida hydro-electric scheme was opened in 1924 with an initial capacity of 800 k.w. to supply Grafton, South Grafton, and Ulmarra over a transmission line of 31 miles. The Nymboida power station is situated on a tributary of the Clarence River in northern New South Wales and now has a capacity of 5,600 k.w. The station now operates in conjunction with a diesel station at Lismore and an associated transmission network to provide supply throughout the north-eastern area from Kyogle in the north to Kempsey in the south, a distance of some 200 miles north and south. In 1946 the system was inter-connected with the Department of Railways system based on Newcastle. The Nymboida system is controlled by the Clarence River County Council.

The Bega Valley scheme was opened in 1944 to supply an area of 2,700 square miles extending from Bermagui to Eden. The power is derived from the waters of Rutherford Creek, a tributary of the Bemboka River, and the capacity of the present installation is 500 k.w. Two 750 k.w. generating units are to be installed in conjunction with a further development on George's Creek, another tributary of the same river, and a comprehensive programme of rural electrification has been initiated. This system is controlled by the Bega Valley County Council.

Wyangala Dam power station was brought into operation in 1947. This station with an installed capacity of 7,200 k.w., utilizes the irrigation waters released from the dam to generate electricity, and in addition is designed to provide an essential stabilizing feature in the transmission system between Burrinjuck and Lithgow, to which the station is inter-connected. The output of the station at any time is dependent on the release of water for irrigation purposes.

Major projects which are being investigated by the New South Wales Government include the hydro-electric development of the Clarence River at the Gorge and other locations, and the hydro-electric development of the Shoalhaven River.

The Clarence Gorge scheme, situated 140 miles from Brisbane and 240 miles from Newcastle, embraces not only hydro-electric development, but also may offer considerable benefits by reason of the flood mitigation effects of a large dam built at this location. Investigations have shown that a dam 245 feet high would impound 4,500,000 acre feet of water and would enable the production of more than 100,000 k.w. of power. It is expected that eventually some 400,000 k.w. of power might be obtained from the Clarence River and its tributaries.

The Commonwealth and States agreed in 1945 on hydro-electric development at the Hume Dam on the Murray River near Albury. Plans are already well advanced for the installation at this site of two 25,000 k.w. water turbines and generators.

Investigations are also taking place into the possibilities of developing hydro-electric power in association with the Warragamba Dam, which is being built for water supply purposes for the Sydney metropolitan area, and at Keepit Dam, which is being constructed for irrigation purposes on the Namoi River near Gunnedah.

§ 3. Victoria.

1. *General.*—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37, and Chapter II.—Physiography of this issue contains information on climatic conditions in each State.

(ii) *Administration.* As indicated earlier (page 1149), practical steps were taken to organize Victoria's resources before the turn of the century, but the passage of the Water Act in 1905 marked the commencement of sustained progress. The State Rivers and Water Supply Commission established by this Act is vested with the control of all irrigation, rural domestic and stock supplies, town water supplies and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally-constituted Waterworks Trusts or Local Governing Bodies.

The operations of the First Mildura Irrigation Trust and the various Waterworks Trusts and Local Governing Bodies, as well as the various Sewerage Authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

2. *Systems Summarized.*—(i) *Works.* Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages has increased from 172,000 to 1,974,250 acre feet (including Victoria's share of the Hume Dam). By means of channels, bores, etc. one-fourth of the State is artificially supplied for stock and domestic purposes. Large areas, which would be largely unproductive without water, are now contributing to the State's wealth. The area actually irrigated has increased from 110,000 acres in 1906 to 723,000 in 1948-49, and irrigation channels command 2,000,000 acres.

The Commission controls 35 large reservoirs and 230 subsidiary storages. The capacities of the storages in acre feet within the various systems at 30th June, 1949 were as follows :—

Goulburn System:—Eildon Weir, 306,000; Goulburn Weir, 20,700; Waranga Basin, 333,400; *Murray-Loddon System:*—Half share of River Murray Commission storages including Hume, Yarrawonga, Torrumbarry, Euston, Mildura and Wentworth, 736,420; Kow Swamp, Laanecoorie, Kerang-North and West Lakes, Lake Boga and Lake Cullulleraine, 148,210; total, 884,630; *Wimmera-Mallee:*—206,830; *Maffra-Sale:*—104,540; *Coliban:*—62,730; *Werribee:*—34,900; *Bellarine Peninsula:*—10,850; *Mornington Peninsula:*—5,800; *Otway:*—1,080; *Miscellaneous:*—2,790; *Total:*—1,974,250.

Irrigation channels extend 4,561 miles; domestic and stock channels, 8,500 miles and drainage and flood protection channels, 2,164 miles, a total of 15,225 miles. In addition, the Commission controls 1,145 miles of piping, comprising 200 miles of mains and 885 miles of reticulation. Farm holdings served with water total 39,813. Urban districts supplied by the Commission's channels and pipelines have a population of 145,260 persons in 128 towns, and a further 133 towns with a total population of 320,700 persons are supplied by Trusts under the supervision of the Commission.

To 30th June, 1949, the total capital expenditure on irrigation, rural water supply, country town water supply, and flood protection and drainage works amounted to £36,250,000, one-half of which is in respect of irrigation.

The total capital liability in respect of works under the control of the Commission at 30th June, 1949 was £30,470,000, of which £28,800,000 was borne by the State and £1,670,000 by water-users. Waterworks Trusts and local governing bodies had a total capital liability of £4,180,000 at 30th June, 1949, of which £2,040,000 was borne by the State and £2,140,000 by the Authorities.

(ii) *Extent of Systems and Nature of Irrigated Culture.* Although the area irrigated is less than 2 per cent. of the State, it yields approximately 16 per cent. of Victoria's rural production. The following table shows the areas of the various irrigation districts and the areas under irrigated culture during 1948-49:—

AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE: VICTORIA,
1948-49.

(Acres.)

System.	Total Area.	Area under Irrigated Culture.									Total.
		Cereals.	Lucerne.	Other Fodder Crops.	Pastures.		Vine-yards.	Orch-arids.	Market Gardens.	Fallow and Miscel-laneous.	
					Sown.	Natural.					
Goulburn	1,253,524	34,160	33,736	5,046	221,209	38,480	432	20,977	4,665	5,408	364,113
Murray—

By Pumping	45,310	110	269	100	206	98	20,377	1,076	205	38	22,479
Total	684,475	18,787	17,906	3,466	108,401	60,354	25,212	5,345	1,754	3,734	244,959
Loddon and other North- ern Systems ..	(a) 19,725	2,979	1,224	277	3,617	1,691	64	4,587	1,786	1,935	18,160
Southern Systems ..	69,313	84	2,796	523	27,709	779	..	493	3,030	208	35,622
Mildura and Private Diversions	(b) 44,000	6,113	6,409	625	18,544	3,083	14,550	4,488	2,645	3,657	60,114
Grand Total	2,071,037	62,123	62,071	9,937	379,480	104,387	40,258	35,890	13,880	14,942	722,968

(a) Area of Campaspe District only.

(b) Area of First Mildura Trust District only.

(iii) *Production.* The influence of irrigation on Victorian production is illustrated by the following estimates prepared by the Commission of the value of production from irrigated areas:—1905-6, £500,000; 1925-26, £5,000,000; 1947-48, £17,000,000. Detailed classification of the 1947-48 irrigation production estimates is as follows:—Live-stock: Dairying, £4,500,000, Beef, £350,000, Pigmeats, £450,000, Lamb, Mutton and Wool, £3,200,000, Poultry and Eggs, £1,000,000, Total Live-stock, £9,500,000; Horticulture: Dried Vine Fruits, £3,200,000, Table and Wine Grapes, £160,000, Canning Fruits, £850,000, Fresh and Jam Fruits, £720,000, Citrus Fruits, £620,000, Total Horticulture, £5,550,000; Vegetables (including Tomatoes), £1,200,000; Other Primary Products, Cereals, Hay, etc., £750,000.

3. *Goulburn System.*—The Eildon and Waranga Reservoirs, on the Goulburn River, supply half the irrigated acreage, and form the largest system in Victoria. Annual rainfall in the valley is only 18 inches and the annual discharge has varied from 567,000 acre feet in a drought year to 6,202,171 acre feet in a particularly wet season. Total regulated supply is 960,100 acre feet, comprising 660,100 held in storages and 300,000 divertible direct from the river.

Water from Eildon Reservoir flows down the Goulburn for 150 miles to the Goulburn Weir, which raises the summer level of the river about 45 feet to 408 feet above sea level, where water is diverted to two main channels. The eastern main channel conveys water to four irrigation districts surrounding Shepparton and the western main channel fills Waranga Basin in addition to supplying the eastern portion of the Rodney Irrigation District.

Two main outlet channels issue from the Waranga Reservoir, one serving the Western part of the Rodney district; while the other serves districts as far west as Boort, and continuing to Beulah East, about 230 miles by channel from Waranga Basin or some 400 miles from Eildon, supplements the Wimmera-Mallee system.

Districts served comprise 202,400 acres east of the Goulburn; 608,350 acres between the Goulburn and Campaspe; 445,100 acres between the Campaspe and Loddon Rivers; and 79,900 acres west of the Loddon—a total of 1,335,750 acres. Main channels of the system have a total length of 213 miles and in addition there are 2,344 miles of distributaries, a total of 2,557 miles for the whole system.

The development of the fruit-canning industries in the Goulburn Valley is an index of the results of irrigation policy. Annual production from the Shepparton, Kyabram and Mooroopna canneries, together with that of city canneries—from Goulburn Valley fruit—aggregates 55,000,000 tins. This represents 79 per cent. of Australia's total production of canned peaches, pears and apricots. Other main products of the Goulburn districts are fat lambs, foddere, wine and table grapes and dairy products.

4. Murray River System. The waters of the River Murray are used to supply an area of more than 500,000 acres between Yarrawonga and Merbein, and channels totalling 1,450 miles are in service. The districts between Yarrawonga and Swan Hill, excepting Tresco, are supplied by gravitation and those down the river (Red Cliffs, Merbein, Nyah and Mildura) are supplied by pumping.

The Murray Valley Irrigation District, supplied from Yarrawonga, will serve 280,000 acres when completed. At 30th June, 1949, 380 miles of main and distributary channels were completed and supplied 111,500 acres west of Yarrawonga.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves an area of 415,500 acres with 846 miles of supply channels. The weir raises the level of the river some 16 feet and enables water to be diverted throughout the year.

Red Cliffs Irrigation District comprises 31,000 acres. At present 11,541 acres are irrigated. This ranks first in importance among Victoria's pumping schemes. A system of main and distributary channels commands every holding in the district. The district, originally for soldier settlement, has been subdivided into 700 blocks. The area planted comprises 11,000 acres of vines and citrus. The first harvest (1924) returned 570 tons of dried fruit in addition to table grapes. The average harvest is now 18,000 tons of raisins, currants and sultanas as well as large quantities of grapes for dessert and distillation.

Merbein Irrigation District comprises 10,506 acres and contains 436 holdings averaging 24 acres each. A reticulated pipe system supplies the town of Merbein, and the pumps also supply the Yelta Waterworks District of 51,200 acres.

Nyah Irrigation District is supplied with water diverted from the Murray by a high-lift pumping plant, serving 3,800 acres in 220 holdings devoted mainly to orchards and vineyards.

5. First Mildura Trust District.—The First Mildura Irrigation Trust—which is the only Irrigation Trust operating in Victoria—controls an area of 44,000 acres, of which 12,937 acres are irrigated. This area irrigated includes 11,680 acres of vines, 871 acres of citrus trees and small areas of apricots, peaches, prunes, figs, almonds, olives, lucerne and other foddere. It produces approximately 15,000 tons of raisins, currants and sultanas each year. The irrigation water is pumped from the River Murray and distributed through 168 miles of channels.

6. Wimmera Mallee System.—The Wimmera-Mallee scheme is regarded as the most extensive domestic and stock supply system in the world. The main supply is drawn from the Grampians storages with a capacity of 206,710 acre feet. Supplementary water is drawn from the Goulburn channels and the Loddon River. The system serves an area of 11,000 square miles or nearly one-eighth of the State, which is largely devoted to wheat and pastoral industries. Without the artificial supply of water, development would be meagre.

Once a year, in the winter or spring, a volume of 85,000 acre feet of water is distributed through 6,600 miles of open channel and some 3,000 miles of farm channels. It is the responsibility of farmers to provide storages sufficient in size to meet their stock and domestic requirements for the ensuing year. At least 16,000 tanks are served. In addition forty-five towns with a total population of 40,000 obtain their water from the system. A total population of 80,000 depends upon the scheme. In the vicinity of Horsham and Murtoa, near the main storages, 3,000 acres are irrigated for soft fruits and pastures, but the limited water resources available will not permit any extension of irrigation.

The northern part of the system is affected by sand drifting into the channels, particularly in years of dry weather conditions, and the Commission is involved in substantial annual expenditures to remove this sand drift before the annual water distribution can be made. It is considered that this expenditure could be reduced by better farming methods, and efforts in this direction such as the sowing of rye-corn, and including the use of compulsory powers to prohibit the fallowing of land or burning of stubble within three chains of channels in light sandy country, have resulted in marked savings in maintenance costs.

7. *Farm Water Supplies.*—The Rural Finance Corporation Act 1949 is designed, *inter alia*, to give farmers an opportunity of establishing or improving domestic and stock water supplies on their farms. Water may be obtained from underground sources, from catchment and gully dams by diversion from existing streams and channels, by storage of sufficient water to meet a year's requirements and by installation of windmills or hydraulic rams.

A Farm Water Supplies Branch has been set up by the State Rivers and Water Supply Commission to advise farmers on farm water supply matters even if finance is not required. A comprehensive booklet entitled "Farm Water Supplies for Domestic and Stock Purposes" has been issued containing general advice on farm water supplies and plans of typical structures and layouts.

8. *Underground Resources.*—A comprehensive survey of the underground water resources of Victoria has been commenced. It will compile records of bores in the Mallee, Wimmera and Glenelg regions, and provide a detailed description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbst Flats, Llowaleng Estate on the Avon River and at Bacchus Marsh where a number of observation bores have been installed.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies in different parts of the basin. Over 300 bores exist in Victoria, with an average daily flow of 3,000,000 gallons. Bores range in depth from 50 to 3,000 feet.

9. *Future Programme.*—Victoria has now reached the stage when the demand for water is far greater than the supply, and a programme which envisages an expenditure of £25,000,000 has been launched. This includes the Rocklands storage on the Glenelg River (264,000 acre feet) and the Cairn-Curran Reservoir on the Loddon (120,000 acre feet). Investigations have also reached an advanced stage concerning a proposed enlargement of the Eildon Reservoir on the Goulburn from 300,000 to 2,350,000 acre feet by the building of a large earthen embankment 250 feet high and 3,300 feet long at an estimated cost of £12,000,000. This would be Australia's greatest storage.

10. *Hydro-electricity.*—The Kiewa project in the Australian Alps is one of the largest hydro-electric developments in Australia. The authority responsible for its construction and operation is the State Electricity Commission of Victoria. The Kiewa River is a tributary of the Murray. The project on which work is now in progress was authorized by the Victorian State Parliament in July, 1948, and will be two and a half times as large as the original project authorized by the Victorian State Parliament in 1937. It will comprise six power stations with a total installed capacity of 289,000 kilowatts and an average output over wet and dry years of 1,000 million kilowatt-hours of electricity per annum.

This major project of the State Electricity Commission of Victoria is based on an engineering plan, evolved after long years of close investigation, and includes the construction of seven reservoirs, five large dams and several subsidiary dykes, 18 miles of tunnels, 150 miles of water races, six power stations, two townships, many miles of roads, a 220,000 volt transmission line 152 miles long to Melbourne, and terminal receiving stations to feed the electricity produced into the Commission's distribution network.

The first of Kiewa's six power stations has been operating since 1944. Its installed capacity is 26,000 kilowatts and it is contributing annually between 40 and 50 million kilowatt-hours of electricity to the State system. The scheduled completion date of the whole project is 1956. The remaining five power stations to be built will come into operation as and when they are completed.

The Kiewa hydro-electric undertaking is one of the two principal developments in the State Electricity Commission's present construction programme which is designed to double the generating capacity of the State system within the next six years and double the annual output of electricity. The Kiewa undertaking will be complementary to the Commission's brown coal burning power station at Yallourn, which at present generates approximately 50 per cent. of all the electricity sold in Victoria and is now being extended to double, and later treble, its present capacity and output.

Further utilization is to be made by the State Electricity Commission of irrigation waters on the Goulburn River by the erection of a very much larger power station operating on the increased flow of water from the new Eildon Weir to be constructed by the State Rivers and Water Supply Commission of Victoria (*see above*). Plans for the new power station are now well advanced.

Irrigation waters from the existing Eildon Reservoir are already utilized to operate the 13,500 kilowatt Sugarloaf power station, which is the largest power station in the State Electricity Commission's Sugarloaf-Rubicon group of five hydro-electric power stations. With a total installed capacity of 26,400 kilowatts, this group has been in operation since 1928, and at present contributes on the average between 130 and 150 million kilowatt-hours of electricity per annum to the State system. Power is generated at Sugarloaf during the summer months when water is being released for irrigation, or at other times of the year when storage is full. The four associated mountain stream stations on the Rubicon and Royston Rivers generate maximum power in the winter and spring, when water flow is at its greatest.

Irrigation water will also be utilized at Hume Weir where a new power station will serve both Victoria and New South Wales. It is being erected by the New South Wales Public Works Department to designs and specifications prepared by the State Electricity Commission of Victoria. Initially, the installed capacity of the power station will be 50,000 kilowatts. Output of electricity, averaging about 200 million kilowatt-hours a year will be shared equally by the two States, each contributing its quota of the annual cost. Victoria's share of the electricity generated will be fed into the State system.

§ 4. Queensland.

1. *General*.—(i) *Rainfall*.—Particulars of the rainfall pattern of Queensland were given in Official Year Book No. 37, page 1122, and Chapter II.—Physiography of this issue contains information on climatic conditions in each State.

(ii) *Administration*. The first comprehensive Water Act in Queensland was the Water Act of 1926 which vested in the Crown the right to the use and flow of all streams, lakes, watercourses, etc., which flowed through or were within the boundaries of two or more occupiers, and also vested in the Commissioner of Irrigation and Water Supply the bed and banks of all boundary streams. The Irrigation Act of 1922 provided for the establishment of Irrigation Areas in approved localities. From 1922 to 1931 the Commissioner of Irrigation and Water Supply administered the Acts but in 1931 the Land Administration Board was appointed to act as the Commissioner and continued to act until the Irrigation and Water Supply Commission Act of 1946 was proclaimed in 1947. Under this Act the Corporation of the Commissioner of Irrigation and Water Supply was reconstituted. The Commissioner is responsible for carrying out the provisions of the Irrigation Acts 1922 to 1949 and the Water Acts 1926 to 1942. He is also responsible for investigations

into, and the planned development of water resources of Queensland under the Land and Water Resources Development Acts 1943 to 1946. For particulars of the New South Wales-Queensland Border Agreement ratified by Acts of both States in 1947 see page 1157.

(iii) *Water Utilization in Queensland.* Queensland's predominant interest in the past in the field of water conservation has been the provision of stock and domestic water supplies in its great pastoral areas which contain about half the Commonwealth's cattle, a sixth of the sheep and a third of the horses. More than half the State's rural production is derived from cattle and sheep. The cattle are distributed throughout the State, but most thickly between the east coast and the 20 inch average annual isohyet. Sheep are mainly pastured on the inland areas west of this isohyet, whilst dairying is concentrated in the south-eastern quarter of the State. In addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meatworks and markets has lately received much attention.

The State's agricultural crops differ from those of other States in that a large proportion is tropical. Sugarcane is the greatest individual crop, representing in value some 40 per cent. of total agricultural production. Approximately 11 per cent. of the sugar cane acreage is irrigated and represents some 55 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase greatly annual production of this crop by means of development under irrigation.

2. *Great Artesian Basin.*—(i) *General.* Western Queensland beyond the 22 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores, and where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, but excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 350,000 square miles of the total State area of 670,500 square miles. Statistics of bores and flow as at 31st December, 1949, are :—Artesian bores drilled, 2,175; artesian bores still flowing, 1,463; total depth drilled, 3,208,085 feet; deepest bore, 7,009 feet; total estimated flow, 221,484,000 gallons per day. Artesian pressure and flow are both steadily diminishing despite new bores drilled. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are :—pressure, 1–2 feet/head, total flow $1\frac{1}{2}$ –2 per cent. per annum.

There are some 19,000 miles of bore drains and the greatest length served by one bore is 121 miles. This method of watering is somewhat wasteful, owing to evaporation and soakage, but it is the most economical in first cost. Not more than 5 per cent. of the water is actually used by stock, and present policy is to restrict working flows to serve limited drain systems of smaller dimensions and reduce evaporation and soakage losses. The average loss per mile of drain is 10,000 gallons per day; with smaller drains this is reduced to 7,000 gallons per day. Pipe lines are very rarely used for distribution owing to high initial cost.

Although artesian beds underlie such a large area of the State, only 87,500 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities because of depth, limited area to be watered, and difficult terrain, for distribution of water by drains. High costs have restricted deep drilling. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

In 1939, a special Committee was appointed to enquire into the geology and hydrology of the Basin and economic use of artesian supplies. A first progress report has been issued by this Committee and its final report is now being prepared. It has been established that the rate of diminution of flow is declining.

In the past, many excavated tanks failed in dry seasons, because of insufficient original depth and capacity, and subsequent silting. Mechanical plant is now almost exclusively in use and much larger tanks are being excavated, even in areas where artesian water may be obtained at a reasonable depth. New tanks with capacities of 20,000 cubic yards and depths of 25 feet are not uncommon. Two tanks with capacities of 65,000 cubic yards each, and depths of 42 feet and 46 feet have recently been completed for watering stock in an area where a good artesian flow may be obtained at a depth less than 2,000 feet.

(ii) *Bore Water Areas.* The Constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows from existing bores resumed with the land for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1948-49 are:—Areas constituted, 66; administered by Commissioner, 46; administered by Local Boards, 20; area benefited, 4,994,326 acres; average rate per acre, 1.24d; number of flowing bores, 60; total flow, 29,434,000 gallons per day; drains served, 2,996 miles.

3. *Stock Route Watering.*—During 1935, a scheme was inaugurated to water adequately stock routes in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einasleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944 a co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands, and with an officer of that Department as superintendent whose duty was, *inter alia*, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes throughout the State. Natural waters are being supplemented by artificial facilities at intervals of about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1949, 208 facilities had been completed and at 30th June, 1949, 212 facilities were under construction or investigation.

4. *Irrigation.*—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production is receiving growing attention in Queensland. However, with the exception of the Theodore Irrigation Area, orthodox projects served by a channel system have not so far been developed, though construction of the Clare Irrigation Area on the Burdekin River is at present under way and investigations of several schemes are being carried out. Because of the large variations in both monthly and annual river flows major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is performed by private farmers operating under licence, and obtaining water by pumping from streams or from natural underground storages. Where available, electricity is the most popular source of power for pumping; the principal areas supplied with electricity comprise the Burdekin Delta and the Lockyer Valley.

Furrow irrigation is used for cotton, sugar cane, and most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Experimental use of the border check method in the irrigation of pasture and fodder crops during the last two years has proved successful and may supersede other methods.

The following table shows for each division of the State the number of irrigators and the areas under irrigated culture for the year ended 31st March, 1949.

AREA OF LAND UNDER IRRIGATED CULTURE : QUEENSLAND, 1948-49.(a)

Division.	No. of Irrigators.	Area under Irrigated Culture. (Acres).							Total.
		Vegetables.	Fruit.	Sugar Cane.	To-bacco.	Cotton.	Other Crops.	Pastures.	
Southern Queensland ..	2,833	13,944	2,013	9,518	541	62	17,272	280	43,630
Central Queensland ..	261	704	173	..	14	65	2,036	143	3,135
Northern Queensland ..	1,153	2,922	666	39,635	898	50	400	81	44,652
Total	4,247	17,570	2,852	49,153	1,453	177	19,708	504	91,417

(a) Year ended 31st March, 1949.

The growth of irrigation is illustrated by the following figures for the total area of irrigated land :—1906, 9,922 acres ; 1916, 10,886 acres ; 1926, 24,250 acres ; 1936-37, 44,509 acres ; 1940-41, 60,961 acres ; 1948-49, 91,417 acres.

The pattern of irrigation in Queensland is dissimilar to that in southern States ; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn "irrigation season" of the temperate southern irrigated lands is not applicable, and that round the year irrigation is required throughout most of the State, the timing and duration of the summer "wet" season being too variable to enable a definite non-irrigation season to be fixed.

(ii) *Lockyer Valley.* West of Brisbane and within 50 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The Valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean rainfall of 30 inches the variation is great, and irrigation is necessary for continuous agricultural production. Recent surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. By June, 1948, 16,000 acres of the Valley were under irrigation, the number of pumps operating from wells and open water exceeding 550 and 500 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the City Electric Light Company which serves the Valley. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. To study local problems an Irrigation Research Station was established at Gatton in 1946 by the Bureau of Investigation.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) *Burdekin River.* The Burdekin River, which joins the sea between Townsville and Bowen is a major factor in the life of North Queensland. In most years heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disabilities. On the other hand, the fertile delta area with its underground water supplies at shallow depth has contributed greatly to the agricultural prosperity of North Queensland. The projected irrigation, hydro-electric and flood mitigation scheme, together with the high level railway bridge at present under construction will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural and industrial production. Present development is confined to the Delta Area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently sugar growers and other farmers have tapped the underground water resources of the Delta to obtain supplies in the dry periods

Sugar is the main irrigated crop, though citrus, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre-feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station now controlled by the Townsville Regional Electricity Board. Around Ayr on the north side of the river electric power from the mains of the Townsville Regional Electricity Board is now being adopted in place of the individual internal combustion engines previously used. At both Home Hill and Ayr water for domestic supply is raised by a windmill on each property.

In 1940 the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An Irrigation Research Station has recently been established to study the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation is being investigated. The development envisaged would include a dam storing some 4,000,000 acre-feet which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobacco-growing, dairying and cattle fattening with sorghum, sunflowers, peanuts, cotton and sugar cane as other possible forms of production.

The recently constituted Clare Irrigation Area is at present being developed for tobacco production. Located from 25 to 37 miles upstream from the mouth of the Burdekin, this area comprises some 6,000 acres which will obtain irrigation water from central pumping stations drawing initially on the unregulated river flow of the Burdekin. This development is a first step in the major Burdekin scheme.

(iv) *Dawson Valley.* The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy some 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed the Dawson Valley. A scheme for the development of the Dawson Valley under irrigation was inaugurated in 1923, providing for the irrigation of some 70,000 acres. Storage for the scheme was to be provided by a dam at Nathan Gorge of some 2,000,000 acre feet capacity. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of some 3,500 acres supplied from a central pumping station. An additional weir has since been built, giving a total storage of 11,000 acre-feet. Pasture, vegetables, cotton, fruit and dairying products are the principal produce. A cheese factory has been established at Theodore, and with the increase in dairying based on irrigated lucerne and pasture, the future of the area appears assured. Attention has recently been given to the former plans for the Valley and earlier work is now under close scrutiny as a prelude to future development.

(v) *Walsh-Barron Tobacco Lands.* The Walsh and Barron Rivers rise in the Great Dividing Range some 50 to 60 miles south-east of Cairns. Sandy soils suitable for tobacco are to be found in the valleys of these rivers in the neighbourhood of Marceba and Dimbulah. Surveys indicate that 40,000 acres of land suitable for irrigated agriculture are available, including 32,000 suitable for tobacco. At present some 800 acres of high grade tobacco are grown annually, together with small areas of vegetables and fruit. Five weirs of combined capacity of 1,480 acre feet are being provided on a number of streams to store water for irrigation. Full development of the area is dependent on the provision of a major dam at Nullinga on the Walsh River, and possibly at Tinaroo Falls on the Barron River and the construction of these dams is being investigated. Tobacco would be the basic crop, whilst peanuts, vegetables, broom-millet, maize, citrus, cotton, and giant cowpeas may prove suitable subsidiary crops. Should pastures be established as a rotational sowing for tobacco, cattle fattening might also be introduced.

(vi) *Border Rivers Project.*—The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of a Border Rivers Commission on which each State is represented (*see* page 1157). A scheme has been formulated which entails the construction of a large dam at Mingoola which would supply irrigated land in each State by diversion and channel systems. The principal crop of the Queensland area would be tobacco, with pastures and fodder crops for dairying and fat lamb raising as rotational plantings and on lands unsuitable for tobacco. This project will provide for the stabilization and enlargement of the existing South Queensland tobacco lands, which at present comprise an annual planting of some 1,800 acres of irrigated tobacco. Small areas of pastures, fodder and fruit are also grown. Supplies are obtained principally from unregulated stream flow, though weirs under construction will afford a measure of stability of supplies for existing growers.

5. *Bureau of Investigation.*—Under the Land and Water Resources Development Act of 1943 a Bureau of Investigation has been set up for the co-ordinated investigation of land and water resources development.

The Bureau consists of representatives from the authorities controlling water resources, lands and agriculture under the chairmanship of the Co-ordinator General of Public Works. Among notable work carried out by the Bureau of Investigation since its inception has been the trial planting of irrigated pastures with a view to developing mixtures suited to the special conditions of each part of the State. Other valuable work has included the mapping of the ultimate land uses of the State, and the detailed investigation of the agricultural and pastoral potentialities of many regions.

6. *Channel Country.*—Extensive investigations of the Channel Country fed by inland rivers in the south-western corner of the State have been made by the Bureau of Investigation. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn off of fat cattle by artificial storage, but that improved transport facilities are essential and are proposed.

7. *Bradfield Scheme.*—Detailed discussion of the scheme proposed by the late Dr. J. J. C. Bradfield for overcoming natural climatic disabilities of the Lake Eyre Basin (South Australia) and Western Queensland will be found on page 1128 of Official Year Book No. 37.

8. *Hydro-electricity.*—Behind the coastal plain of the Cairns-Ingham area is an extensive plateau, the elevation ranging from 2,000 to 3,000 feet although isolated peaks exceed 4,000 feet. The short coastal streams which rise on the plateau descend rapidly into deep gorges, which they have cut through the old divide. With heavy monsoonal rainfall on their catchments and concentrated fall, these streams represent a considerable potential source of power, but storage, which can in most cases be provided, is essential to control the very variable flow.

The Barron Falls Scheme, 14 miles north-west of Cairns, came into operation in 1935. The installed plant operates under a head of 410 feet and comprises three 2,000 h.p. turbines each connected to a 1,320 k.w. generator. Average rainfall varies from 80 to 150 inches along the ranges to less than 35 inches in the western portion of the catchment. There is extreme variation from year to year, resulting in great fluctuation of stream flow which, at Kuranda, has varied from a maximum of 117,000 cusecs in 1911 to a minimum of 30 in 1915. Storage to regulate the flow is possible but has not yet been provided. During periods of low flow the supply of electricity is supplemented by fuel plants at Cairns, Atherton, and Innisfail. Power is distributed over 22,000 volt transmission lines serving the tableland and extending southward along the coast to Tully.

A small hydro-electric scheme on the Mossman River, 5 miles from Mossman, North Queensland, comprises two 120 h.p. turbines operating under a head of 200 feet.

An immediate commencement is to be made on the construction of a hydro-electric power scheme at Tully Falls. Water controlled by Koombooloomba Dam to be built on the upper Tully River will be diverted, a short distance above Tully Falls, through a tunnel and steel penstocks to pelton driven generators under a head of 1,485 feet. Ultimate installation will be four 18,000 k.w. sets, two of which will be installed initially. Future automatic power plants upstream and downstream from Tully Falls will consist of two 7,500 k.w. sets under 405 feet head and one 5,400 k.w. set under 230 feet head. The combined peak load for the three plants will be 69,000 k.w.

Other northern schemes which have been investigated include Freshwater Creek (3,900 k.w.); North Johnstone-Russell Rivers (32,000 k.w.); Beatrice-North Johnstone Rivers (9,000 k.w.); South Johnstone River (25,000 k.w.); extension of Barron Falls scheme (22,000 k.w.); Herbert River (90,000 k.w.). The total potential of the plateau region is therefore about 250,000 k.w. at 50 per cent. load factor.

A power plant immediately below the Burdekin Falls Dam of the proposed Burdekin River Irrigation Scheme will operate under an average head of 225 feet. The output of firm power will depend upon the varying demand for water for irrigation but it is expected to average about 50,000 k.w.

South of the Burdekin River no appreciable hydro-electric development is practicable. A plant of 3,200 k.w. capacity is being installed to utilize the outflow from Somerset Dam on the Stanley River a few miles above its confluence with the Brisbane River.

§ 5. South Australia.

1. *General.*—(i) *Rainfall.* Brief particulars of the climatic conditions in South Australia were given on page 1129 of Official Year Book No. 37, and Chapter II.—Physiography of this issue contains information on the climatic conditions in each State.

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department which administers the Water-works Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to “divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under or on any land entered upon for the purpose of supplying water to the inhabitants of any water district”.

(iii) *Methods of Catchment and Conservation.* Early steps were taken to vest all running streams, springs and “soaks” in the Crown. Since the Water Conservation Act was passed in 1886 more than 550 dams, tanks and “rainsheds” have been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,263,752. The rainsheds comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks. Rainshed catchments vary from a few hundred square feet to four acres, discharging water into tanks ranging in capacity from 2,000 to 500,000 gallons. Over most of the State extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels are used to reduce seepage and evaporation. Meters are attached to practically all services to check usage by individual consumers.

2. *Irrigation.*—In South Australia irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey Brothers (*see* page 1149) in 1887 whereby 250,000 acres at Renmark were made available for irrigation settlement. Exclusive of land being developed for War Service Land Settlement purposes the Department of Lands administers an area of 26,959 acres of irrigable high land, together with 9,410 acres of reclaimed swamp and 163,491 acres of non-irrigible land in the irrigation areas

In addition the Renmark Irrigation Trust controls 20,557 acres of which more than 8,000 are irrigated. Water used for irrigation in 1949 in the area controlled by the Department of Lands was approximately 120,000 acre feet. In the Renmark area water used for irrigation in 1948-49 was 29,000 acre feet. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lemons, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes, and citrus fruits. Before irrigation, these semi-arid lands were of little productive value. The following tables show the acreage devoted to various crops in the government controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government controlled reclaimed swamp districts near the mouth of the Murray which are devoted to dairying.

IRRIGATED AREAS : SOUTH AUSTRALIA, 1948-49.

(Acres.)

Area.	Vine Fruits.	Tree Fruits.	Citrus Fruits.	Lucerne.	Other Fodders.	Total.
Orchard land—						
Berri	5,557	603	1,006	38	..	7,204

Cowirra	33	543	576
Jervois	75	3,524	3,599
Total	249	8,303	8,552

Total population of the upper Murray Irrigation Areas in South Australia is approximately 17,000 and 1,500 persons are settled on the reclaimed areas. The latter figure does not include the population of adjacent towns outside the area, but closely associated therewith.

The expenditure incurred by the Government to the 30th June, 1949 in purchase of land, reclamation of swamps, preparation of irrigable lands for fruit growing, and purchase of pumping plants for drainage and water supply is approximately £4,708,000. Further irrigation development is being undertaken as a part of the Commonwealth-wide War Service Land Settlement Scheme. South Australia's share of a total of 32,000 acres of horticultural plantings under the Scheme is 10,000 acres, comprising citrus, 3,500 acres, vines, 5,300 acres, and deciduous tree fruits, 1,200 acres. Schemes already approved and under construction will absorb between 7,000 and 8,000 acres, and further areas are being selected to take up the balance. Holdings will be provided for about 380 settlers, and annual production from the 10,000 acres of plantings mentioned is estimated at:—Citrus, 1,000,000 cases; deciduous tree fruits—dried, 800 tons, fresh, 2,300 tons; dried vine fruits, 5,600 tons, wine grapes, 12,800 tons. On present-day prices, the value of this production would approximate £900,000.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 80 miles of channel for the reticulation of 8,491 acres.

3. *Country Water Supply Schemes.*—(i) *Summary.* Water conservation and distribution works in South Australia have cost £23,442,000 (exclusive of river control and irrigation works on the River Murray which are dealt with above). A summary of statistical information concerning country supplies in 1948-49 follows:—Length of water mains, 5,457 miles; capacity of storages, 9,500 million gallons; approximate population served, 225,000; area served, approximately 4,000,000 acres; and total capital cost, £16,819,000.

Areas extending for a distance of 90 miles north of Adelaide are supplied from the Warren and Barossa Reservoirs in the Barossa Ranges, and agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with a connexion to the Warren system. Eyre Peninsula has, up to the present, been supplied from the Tod River Reservoir (9,167 acre feet) and three small reservoirs near the Franklin Harbour District, but demands have increased to such an extent in recent years that further sources of supply are necessary and with this end in view a water-bearing area known as the Uley-Wanilla Basin has been developed, and water from it is now being used in the Tod River system.

(ii) *Morgan-Whyalla Water Supply Scheme.* For particulars of the construction and works of the 223-mile pipe line bringing water from the Murray at Morgan to Whyalla on Spencer Gulf see Official Year Book No. 37, page 1132. The Morgan-Whyalla Water Supply Scheme forms part of the South Australian Country Water Supply system referred to above.

4. *Underground Water.*—The occupied portion of South Australia is, on the whole, well endowed with underground water. The extent of the several artesian basins is tolerably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock, the major use to which it is put. Apart from numerous boreholes and wells tapping underground water for farms, stations and towns, two notable basins are being developed on Eyre Peninsula—one at Flinders (Streaky Bay) and the other at Uley-Wanilla, near Port Lincoln. Leigh Creek coalfield, some 350 miles north of Adelaide, derives its supply from a borehole at Sliding Rock mine, the water being pumped through a pipeline 25 miles long.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are large in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government, however, to provide watering places along stock routes, and pastoralists rely largely on supplies in suspended basins at shallower depths.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east, especially for farms, but also for township supplies for Mount Gambier, Naracoorte, Bordertown and Pinnaroo. The maximum depth of boreholes is 235 feet and the minimum 71 feet. Average tested yield is 14,808 gallons per day.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 40 drills. A large area within the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne and an examination of a large part of Kangaroo Island and Southern Eyre Peninsula is being made in connexion with Soldier Settlement schemes.

The results of comprehensive surveys of underground supplies undertaken by geologists of the South Australian Government have been published in the State's geological survey bulletins in recent years.

5. *Farm Water Schemes.*—While the Department of Mines and the Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas derive water supply under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

6. *South-Eastern Drainage.*—For some information on the drainage schemes necessary for the disposal of surplus water in areas in the south-east of South Australia see Official Year Book No. 37, page 1133.

§ 6. Western Australia.

1. *General.*—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia were given on page 1133 of Official Year Book No. 37, and Chapter II.—Physiography of this issue contains information on the climatic conditions in each State.

(ii) *Administration.* Irrigation districts are administered under the Rights in Water and Irrigation Act of 1914-1945 and the Government is advised by an Irrigation Commission representing the local irrigationists and government technical and financial branches. The Goldfields Water Supply is administered by a branch of the Public Works Water Supply Department and its responsibilities include control of water from this scheme for agricultural purposes. The metropolitan water supply is controlled by a separate department under the control of the Minister for Water Supply, Sewerage and Drainage. Under the Water Boards Act (1904) seventeen towns are administered by local water boards and nineteen are under direct Ministerial control. The Minister also controls three District Farming Schemes. Water rights over water flowing in streams and water courses is vested in the Crown unless specifically appropriated for irrigation purposes under the irrigation legislation.

2. *Irrigation.*—The main irrigation districts—Harvey, Waroona and Collie—are along the south-west railway line between Waroona (70 miles from Perth) and Dardanup (116 miles from Perth). The total area irrigated in these districts during 1948-49 was 16,691 acres and the total water used was 50,937 acre feet. The total acre waterings (i.e. the number of acres watered multiplied by the average number of waterings) was 79,666 and the number of holdings 428.

Harvey Districts (Nos. 1 and 2—32,663 acres) are supplied from the Harvey Weir (8,300 acre feet) and Stirling Dam (44,344 acre feet), Waroona District (10,325 acres) from Drakesbrook Dam (1,855 acre feet) and Samson's Brook Dam (6,540 acre feet), and Collie District (28,762 acres) from Wellington Dam (27,800 acre feet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie during the seasons 1938-39 and 1944-45 to 1948-49, illustrates the growth of these irrigation schemes.

IRRIGATION, WESTERN AUSTRALIA : ACRE WATERINGS.

Year.	Pasture.	Fodder.	Potatoes.	Vegetables.	Orchard.	Flax and Broom Millet, etc.	All Crops.
1938-39	31,049	934	3,142	692	922	..	36,739
1944-45	50,748	453	5,363	2,543	1,107	66	60,280
1945-46	57,707	995	4,269	2,915	1,176	209	67,271
1946-47	61,948	547	4,304	3,209	1,096	..	71,104
1947-48	57,450	508	3,714	3,433	1,190	..	66,295
1948-49	71,687	640	2,692	3,562	1,085	..	79,666

3. *Water Supply Schemes.*—(i) *Goldfields Scheme.* Western Australia has one of Australia's most spectacular water supply schemes and a brief account of its development will be found on page 1134 of Official Year Book No. 37, and an account in greater detail on page 576 of No. 6. Mundaring reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the goldfields, and has a capacity of 4,650 million gallons and a catchment of 569 square miles. The enlargement of the reservoir to 15,000 million gallons by raising the dam a further 32 feet is in progress and expected to be complete in 1951. The water now passes through 430 miles of steel main, mostly of 30 inch diameter, aided by eight pumping stations, involving a total net lift of 1,280 feet.

Hundreds of miles of branch mains and pipes have been laid to mining districts, towns and farming districts, the most important being the Norseman extension of 101 miles. The system serves 34 towns and water is reticulated to 970,000 acres of farming lands. Total length of mains is 1,773 miles and the population served is 50,000. Total quantity of water pumped from Mundaring in 1948-49 was 2,410 million gallons. Total cost of system to the end of 1948-49 was £6,614,390.

(ii) *Rock Catchments.* An interesting feature of the State's conservation system is found in the Barbalin, Narembeen and Kondinin District Farming Land Schemes in the wheat belt, where extensive granite outcrops have been used as catchments. The rain is caught at the foot of the rocks, and pumped to tanks from which the water is reticulated to farms and to a number of small towns. For further particulars see Official Year Book No. 37, page 1135.

(iii) *South-west Scheme.* The Commonwealth Government has agreed to assist a scheme to extend water for agricultural areas and towns in the south-west of Western Australia, which will be administered by the State Government. It is estimated that the scheme will cost £4,300,000 of which the Commonwealth will contribute £2,150,000. The scheme provides for raising the height of the Mundaring Weir and the Wellington Dam to increase the storage capacity of these reservoirs to 15,000 million gallons and 38,000 million gallons respectively, and for increasing the capacity of pumping stations on the Goldfields pipeline to permit water diversions from that source. Twenty-three towns and over 4,000,000 acres of agricultural country will benefit. Work has been commenced on the pipe line from Wellington Reservoir to Narrogin.

4. *Underground Water.*—Individual farmers, orchardists, market gardeners and others derive water from wells or windmills wherever available, and, where power is available, pumps and motors are used to tap such supplies. The Department of Public Works has twelve boring plants which are lent out to farmers to facilitate boring operations to an average depth of 150 feet. The Department also contracts with private firms to bore for communal farm supplies. During the past 50 years 298 artesian and sub-artesian bores have been sunk, mostly for private purposes. The total depth of all recorded bores in Western Australia is 243,612 feet; daily flow is 81,418,500 gallons; and the average depth at which water is struck is 819 feet. Maximum depth of any bore is 4,006 feet and minimum 21 feet.

5. *Ord River Scheme.*—The Ord River in the north-west of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 in the north. The hottest months (December to March) are also months of highest rainfall. Communications and population are

sparse. The Western Australian Government is considering a proposal to build a dam to conserve 2,000,000 acre feet of water, equipped with hydro-electric plant, which might supply irrigation water for an area of 100,000 acres if investigations show that the climate and soil conditions are suitable for vegetables, tropical fruits and rice. However, the economic production of these and other crops, as well as the possible use of such irrigation areas for interim fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

§ 7. Tasmania.

1. *General.*—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania were given on page 1136 of Official Year Book No. 37, and Chapter II.—Physiography of this issue contains information on the climatic condition in each State.

(ii) *Main Purposes of Conservation and Utilization.* Owing to its fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare. Underground water is of poor quality and a small quantity exists over an area in the Midlands which has been exploited to a limited extent only by bores and windmills. Geological conditions do not appear to favour the utilization of ground water except on a minor scale. There is only one known flowing bore—at Speyrtton, which yields 1,690 gallons per hour.

(iii) *Administration.* The State does not own all natural waters as in Victoria, and consequently the subject of water rights is a difficult one. The Mines Department has power to grant certain rights for mining operations, and the Hydro-Electric Commission must approve the abstraction of water from any stream or lake of potential value for power generation. There is no machinery other than the Courts for deciding the issue in cases where municipal councils or private individuals propose to divert water for town supplies or irrigation from streams in which neither of these two authorities is interested. The only exceptions are a few municipal and industrial undertakings which have statutory rights.

2. *Hydro-electricity.*—Tasmania depends entirely on water for power development, and its power potential has been estimated at 3,500,000 h.p. on the basis of 50 per cent load factor and 80 per cent turbine and generator efficiency. The Hydro-electric Commission, the authority controlling the generation of electricity in Tasmania, provides most of Tasmania's power requirements from three schemes—the Waddamana, Tarralcah and Shannon. The Mount Lyell Mining and Railway Co. Ltd. also operates a 10,000 k.w. plant at Lake Margaret on the west coast to serve copper mines, and this station is interconnected with the Commission's network. Small stations operated by tin mining companies have a total capacity of 2,000 k.w.

Only a brief description of the major schemes is given below.

The Waddamana scheme was completed in 1916 with an original capacity of 10,000 h.p., since increased to 66,000 h.p. Waddamana B was completed in 1944 with a capacity of 33,400 h.p. and since that date the total has been increased to 66,000 h.p.

In the Shannon scheme water from the Great Lake passes down the Shannon River to the Shannon Power Station by pipeline and canal, where 14,500 h.p. is generated before the water passes into the Waddamana canal and power station.

Both the Waddamana and Shannon power stations derive their energy from the Great Lake, practically in the centre of the island, with an elevation of 3,380 feet above sea level.

The Tarralcah scheme is situated on the Nive River, but is served by water from the River Derwent and Lake St. Clair. The water from Lake St. Clair flows down the Derwent to Butler's Gorge, where a 200 feet high concrete dam (Clark Dam) will impound 243,000 acre feet of water. At the foot of the dam Butler's Gorge power station is being

built to develop 17,000 h.p. Water discharged from Clark Dam will continue down the River Derwent and will be diverted into the Tarraleah Canal and thence into Tarraleah Lagoon for use in the Tarraleah power station, the capacity of which will be increased from 105,000 h.p. to 126,000 h.p.

Work has commenced on the Nive Scheme in which a dam will divert the headwaters of the Nive, Pine and Serpentine Rivers into a chain of lakes. These lakes will be formed by constructing levees across the outlets of Woodward's, Brady's, Big and Nive Marshes, and they will provide 62 cusec-years of storage. Water will then be conveyed by a tunnel and penstocks to the Tungatinah power station which will have an ultimate capacity of 140,000 h.p. As a further stage of this project a dam across the River Dee at the outlet from Lake Echo will provide about 300 cusec-years of storage which will be used to augment the storage in Brady's, Big and Nive Marshes.

Preliminary work has commenced on the Trevallyn power development scheme. A power station with an ultimate capacity of 84,000 h.p. will be built near Launceston, utilizing water from the Lake, Macquarie, South Esk and Meander Rivers. Upon completion of this project Duck Reach power station will go out of service.

The following table shows, as at the end of 1949, the development of Tasmania's hydro-electric power resources:—

HYDRO-ELECTRIC POWER RESOURCES : TASMANIA.

Name.						Installed Capacity.	Ultimate Capacity.
						K.W.	K.W.
Waddamana	97,000	97,000
Shannon	10,500	10,500
Tarraleah	75,000	90,000
Clark Dam (Butler's Gorge)	Nil	12,000
Launceston (Duck Reach)	2,000	2,000
Trevallyn	Nil	63,000
Tungatinah	Nil	125,000
Lake Margaret	10,000	10,000

3. **Industrial.**—Three principal industrial schemes have been installed privately. The Australian Newsprint Mills pump approximately 6,000,000 gallons a day from the Derwent River at Lawaitta for the Boyer mills. Associated Paper Mills pump several million gallons a day from Huu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Weybridge. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, at present largely unsettled. Diversion to the eastern side of the watersheds is regarded as practicable.

4. **Irrigation.**—There are no State irrigation projects and none is envisaged in the near future. All systems operating are privately owned and, with one exception (at Bushy Park), are single farm units. At Bushy Park a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation, as practised in Tasmania, was applied in 1948-49 to 9,563 acres devoted to: hops (1,249 acres); fruit (1,046 acres); pastures (6,851); green fodder, etc. (145 acres) and other crops (278 acres).

§ 8. Northern Territory.

1. **Climate and Topography.** Some particulars of the climate and main topographical features of the Northern Territory were given on page 1138 of Official Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter X.—The Territories of Australia.

2. **Administration.**—Under the Control of Waters Ordinance (1938) of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under conditions prescribed.

3. **Underground Water.**—Artesian water is found mainly in the south-east where the Great Artesian Basin enters the Territory. Pastoral (beef) production accounts for the bulk of the Territory's income, and the marked seasonal conditions affect the industry's economy. During the wet summer season there is adequate water, but during the winter most natural watering points disappear, and pastures dry. Bores supplement the permanent watering points which are mainly along river frontages. The cattle industry is concentrated in the area in which the feed retains an appreciable nutritive value during the winter despite the dry conditions. This area is not in the wetter coastal regions, but in the inland belt of 15 to 25 inch rainfall and to the north of Alice Springs. Lack of bores is a limiting factor in the industry's economy, as cattle are able to thrive only within certain distances of reliable water.

Some 600 bores have been recorded, but complete records are not available. Maximum depth is more than 600 feet. For further information see Official Year Book No. 37, page 1139.

4. **Irrigation.**—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (80,350 acre feet) which serves Darwin with a reticulated supply. Irrigation has therefore assumed no current importance. For particulars of present activity and potentialities see page 1138 of the previous issue.

§ 9. Papua and New Guinea.

1. **Rainfall.**—When all localities (32 stations) where gauges are kept, are taken into consideration, the average annual rainfall, over periods varying from two to ten years, is about 159.21 inches. This figure includes both inland and coastal stations. Mean annual rainfall for the inland stations, which average 786 feet in height, is 134.77 inches and for coastal stations, 83.66 inches.

2. **General.**—For a general description of these territories see Chapter X.—“The Territories of Australia”, pages 365, 367 and 372 of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development. The main water conservation interest in New Guinea at present is the hydro-electric potential.

Those portions of New Guinea administered by Australia are well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to 13,000 feet. Complete data concerning water resources are not available, but it is known that the opportunities for production of hydro-electric power are extensive. Some authorities estimate that 20,000,000 h.p. could be generated. Present investigations have been limited to those areas where a demand for power is likely to arise. New Guinea has a substantial native population and few major industries.

Explorations over the southern portion, known as Papua, have resulted in the collection of much information concerning water resources. The largest stream is the Fly River, at least 500 miles long, which is situated in the western division. Its large tributaries extend to the northern boundary of the Territory rising among lofty mountain ranges. Records show that at a point above the tidal influence, where the river is 600 yards wide and 40 feet deep, the stream travels at a rate of $3\frac{1}{2}$ miles per hour and discharges 105,200,000 gallons per minute. All the principal rivers flow from the main range in a southerly direction. Most of them carry a large volume from a great height over relatively short distances. They have a total catchment of about 50,000 square miles having an elevation between 2,000 and 13,000 feet. The Government Geologist has estimated that if only 50 per cent. of the annual rainfall were utilized through a height of only 500 feet a total of 8,500,000 h.p. would be produced.

CHAPTER XXVI.

DEFENCE.

§ 1. Department of Defence.

1. **Introduction.**—At the outbreak of the 1939–45 War, the Department of Defence comprised the three Fighting Services. In November, 1939 separate Departments, each with its own Minister, were created for the control and administration of the Navy, Army and Air Force. The Defence Department as then reconstituted retained responsibility for over-all defence policy and for the conduct during the war of the business of the War Cabinet and the Advisory War Council.

2. **Post-war Functions and Organization.**—(i) *The Cabinet and the Council of Defence.* The determination of defence policy is the responsibility of Cabinet. It is assisted in this by the Council of Defence, which is a statutory body created under Section 28 of the Defence Act, its functions being to consider and advise upon any questions of defence policy or organization which are referred to it by the Prime Minister or the Minister for Defence. The Council consists of the Prime Minister and those Ministers most concerned in defence, the three Chiefs of Staff and the Secretary, Department of Defence.

(ii) *Functions of Department of Defence.* Subject to the authority of Cabinet and the Council of Defence, the Minister and Department of Defence are responsible for:—

- (1) The formulation and general application of a unified defence policy relating to the Defence Forces and their requirements, including:—(a) co-operation in British Commonwealth defence and the defence aspect of the Charter of the United Nations; (b) the supply aspect of defence policy, including the review of production programmes and capacity; (c) the scientific aspect of defence policy; and (d) the financial requirements of defence policy, and the allocation of funds made available.
- (2) The defence aspect of Armistice and Peace Terms, Control Commissions, and Forces of Occupation.
- (3) Matters of policy or principle and important questions having a joint service or inter-departmental defence aspect.
- (4) The higher defence machinery, the control of the joint service machinery, and the Secretariat of the Council of Defence.
- (5) The defence aspect of questions relating to the organization and machinery for:—(a) co-operation in British Commonwealth defence; (b) co-operation in regional security, including obligations under the United Nations Charter; (c) higher direction in war; and (d) higher direction of the Services.
- (6) The Commonwealth War Book, which is a summary of national plans for an emergency as developed in Departmental War Books.
- (7) The administration of inter-service organizations, such as the joint intelligence machinery.
- (8) The defence aspect of:—the strength and organization of the Forces, higher appointments in the Services, Honours and Awards, and civil defence policy.

(iii) *Joint Service and Inter-Departmental Machinery.* The joint service and inter-departmental advisory machinery of the Department consists of various committees headed by the Defence Committee, the Chiefs of Staff Committee and the Joint War Production Committee. The Defence Committee is a statutory body consisting of the Secretary, Department of Defence, who is Chairman, and the Chiefs of Staff of the three Services. In general, its function is to advise on defence policy as a whole, and on matters of policy or principle and important questions having a joint service or inter-departmental defence aspect. The main responsibility of the Chiefs of Staff Committee is the preparation of strategic appreciations and military plans. The function of the Joint War Production Committee is, briefly, to examine the relation between strategical plans and their requirements to ensure that the war potential for them exists. The major committees subordinate to the Defence Committee and/or the Chiefs of Staff Committee comprise the principal Administrative Officers Committee (Maintenance and

Materials), the Principal Administrative Officers Committee (Personnel), the Defence Research and Development Policy Committee, the Joint Planning Committee, the Joint Intelligence Committee and the Joint Administrative Planning Committee.

3. Post-war Defence Policy.—(i) *Basis of Australia's Post-war Defence Policy.* The basis of Australia's post-war defence policy is stated in the following terms in the Government's announcement of 4th June, 1947 :—

“The Forces to be placed at the disposal of the United Nations for the maintenance of international peace and security, including regional arrangements in the Pacific ;

The Forces to be maintained under arrangements for co-operation in British Commonwealth Defence ; and

The Forces to be maintained to provide for the inherent right of individual self-defence ”.

(ii) *Post-war Defence Programme.* The approved post-war defence programme extending over a period of five years from 1947-48 to 1951-52 originally provided for the expenditure of £250,000,000 during the period, and this has subsequently been increased to £295,000,000. The post-war defence programme is designed to secure a balanced scheme of defence providing for the Navy, Army and Air Force, Defence Research and Development, and Munitions and Supply, in proper proportions within the limits of the available resources that can be devoted to defence. The roles of the three Services are blended and inter-related and their strength and organization have been determined on the basis of the fulfilment of the objectives of policy stated above.

(iii) *Defence Research and Development.* The whole question of post-war policy is affected by the impact of scientific development on the types of weapons and armament for the various Services, and the results of these developments will be under constant notice. High priority is therefore given in the programme to defence research and development, for which an amount of £33,500,000 is being provided under the five-year programme. The main individual item is the Long Range Weapons Project which is a joint United Kingdom-Australian undertaking. It is the first important step in the widening of Australia's responsibility in defence research and development in accordance with the policy of the strategic development and distribution of the resources of the British Commonwealth. The Department of Defence is responsible for questions of policy in this field, and the Department of Supply and Development is the responsible authority for executive action in respect of approved policy decisions.

(iv) *National Planning for an Emergency.* To achieve a balanced defence policy, it is necessary to ensure proper co-ordination of the Navy, Army and Air Forces, the supply organization and the civil economy which supports the direct military effort. The Government's policy provides for the co-ordination of these as integral parts of the national defence policy. The basis of planning for these matters and also for the civil defence measures necessary to protect the community against attack by modern weapons is the Commonwealth War Book and Departmental War Books. These are now being revised in the light of wartime policy and likely contingencies. There has been established a Standing Committee for the Co-ordination of Departmental Action to Meet an Emergency and sub-committees of the Standing Committee have been set up for detailed planning as required.

(v) *Flexibility of Post-war Policy.* It is important that the future developments in weapons and methods of war should be borne in mind when considering national defence, the shape and size of post-war forces, and the new problems of organization and training which they will create.

Australian policy, like that of the United Kingdom, will be kept flexible. At the same time, while the completion of the objectives laid down will be vigorously pursued according to the planned schedule of the programme, a continuous review will be maintained in regard to progress and the need for any variations that may arise.

4. Co-operation in British Commonwealth Defence.—The defence programme gives practical and substantial effect to the acceptance by Australia of a larger contribution towards the defence of the British Commonwealth in the Pacific, and the relief in corresponding degree of the burden for so long carried by the United Kingdom. The need for improved machinery for co-operation in British Commonwealth defence has been

recognized and advocated by the Australian Government for some time and now that proposals by it to achieve that objective, with particular reference to the Pacific Area, have been agreed to by the Governments of the United Kingdom and New Zealand, planning is actively proceeding between those Governments on mutual defence.

5. **Australian Participation in the Occupation of Japan.**—An account of Australia's part in the organization and activities of the British Commonwealth Occupation Force in Japan up to the end of 1947 will be found in Official Year Book No. 37, page 1144. During 1948 the United Kingdom and New Zealand contingents were withdrawn except for a handful of administrative personnel. On 30th June, 1949 the strength of the Australian contingent was 2,630.

§ 2. Military Defence.

1. **State Systems.**—A detailed historical account of the Australian defence forces prior to Federation will be found in Official Year Book No. 2, pp. 1075–1080. *See also* Official Year Book No. 12, p. 999.

The strength of the military forces of the States on 31st December, 1900 (the eve of Federation) was:—New South Wales, 9,338; Victoria, 6,335; Queensland, 4,028; South Australia, 2,932; Western Australia, 2,696; Tasmania, 2,024; total for Australia, 27,353. This total is exclusive of cadets, reservists and rifle club members.

2. **Commonwealth Systems.**—(i) *General.* Under the terms of the Constitution Act 1900, the Commonwealth took over control of defence matters in March, 1901. The growth of the Commonwealth Military Forces may be considered to have taken place in fifteen phases. For particulars of the phases which cover the period from the welding together of the military forces of the States into one homogeneous army in 1902 up to the decision to increase the training strength of the militia to 70,000 in the year before the 1939–45 War (phases 1–7), *see* Official Year Book No. 36 and earlier issues.

The eighth phase was initiated by the Government on 2nd September, 1939, when the Governor-General issued a proclamation of the existence of war or of a danger thereof and for the calling out of the Citizen Forces for war service. The ninth phase was initiated on 13th October, 1939, when the organization of the Australian Military Forces into Commands came into operation. The objects of the Command Organization are as follows:—(a) to bring peace organization into line with war organization; (b) to provide for the personal and whole-time guidance and supervision, by a higher commander, of divisional and other formation commanders, on questions of training and general preparedness for war; and (c) to reduce the number of lower formations under the direct control of Army Head-quarters.

The tenth phase was initiated on 30th November, 1939, when a proclamation was issued under the Defence Act calling upon certain personnel to enlist and serve in the Defence Forces.

The eleventh phase: Owing to a considerable expansion in the administrative functions which the three main commands were called upon to perform, it was decided to relieve the G.Os.C. of these commands and their staffs of much of their administrative responsibilities in order that they might concentrate on operational matters. In January, 1942, therefore, Northern, Eastern and Southern Commands were divided into separate command and base head-quarters—the command head-quarters to handle operational, and base head-quarters administrative, matters.

The twelfth phase: As a result of the expansion in supply and other administrative installations in Australia, it was found necessary to revise the machinery for command administration of lines of communication areas and to decentralize control. A division into lines of communication areas was therefore made, and these areas corresponded with Northern, Eastern, Southern and Western Commands and 7th and 8th Military Districts. Command and general administrative control of the lines of communication areas were placed under the respective base head-quarters and 7th and 8th Military Districts, and came directly under Army Head-quarters.

The thirteenth phase: In August, 1941 War Cabinet approved of Lieutenant-General Sir Iven Mackay as G.O.C.-in-C. Home Forces commanding the forces in Northern, Eastern and Southern Commands. The G.O.C.-in-C. was made superior to the G.Os.C. Commands for the direction of operations, but subordinate to the Military Board, which remained the body advising the Minister for the Army, and through him, War Cabinet.

The fourteenth phase: Shortly after the outbreak of war with Japan, a number of units of the United States Forces were routed to Australia. Subsequently additional forces arrived. By agreement among the Governments of the United States, the United Kingdom, the Netherlands and Australia in April, 1942, General Douglas MacArthur was appointed Commander-in-Chief, South-west Pacific Area. General Sir Thomas Blamey was assigned to the command of the Allied Land Forces in the South-west Pacific Area by General Head-quarters, South-west Pacific Area. With the appointment of General Sir Thomas Blamey as Commander-in-Chief Australian Military Forces, the Military Board ceased to function and Army Head-quarters became Allied Land Forces Head-quarters, Australia. As from 9th April, 1942, the system of commands and bases was abolished and replaced by the field army and lines of communication areas which were established in each of the six States on the mainland plus Northern Territory and New Guinea. Field formations were formed as follows:—

First Australian Army—from Northern and Eastern Commands.

Second Australian Army—from Southern Command.

Third Australian Corps—from Western Command.

Northern Territory Force—from 7th Military District.

New Guinea Force—from 8th Military District.

In March, 1943 First and Second Armies took over from Queensland, New South Wales and Victoria Lines of Communication Areas the command of all coast and static anti-aircraft artillery defences and training establishments. On 16th June, 1944 Western Command was re-established and took over the combined responsibilities of Third Australian Corps and Western Australia Line of Communication Area.

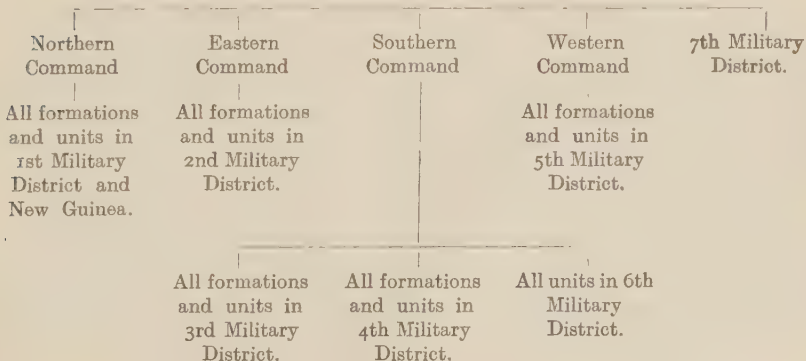

The fifteenth phase: In March, 1946 the Military Board and the organization of commands and military districts were re-introduced.

(ii) *Population of Military Age, Census, 1947.* The following particulars show the numbers of males of military age in the population of Australia as at the Census of 30th June, 1947. The total number of cadet age, 12 and over, and under 18, was 333,373; at citizen soldier age, 18 and over, and under 26, 495,859; and 26 and over, and under 35, 532,210; making a total of 1,028,069, 18 and over, and under 35, which is considered the best period for military service. In addition to the above-mentioned, there were 1,186,141 males 35 and over, and under 60, in Australia at the 1947 Census.

(iii) *Allotment of Units.* Under the Command Organization (*see above*) units are raised on a territorial basis, each State supplying its proportion of the personnel required for the fighting services, the organization at 30th June, 1949 being as follows:—

COMMAND ORGANIZATION.

Army Head-quarters.

Military Districts conform generally to State or Territory areas, as follows :—1st Military District, Queensland; 2nd, New South Wales; 3rd, Victoria; 4th, South Australia; 5th, Western Australia; 6th, Tasmania; 7th, Northern Territory. Third Military District includes a considerable portion of Southern New South Wales, and 4th includes Broken Hill.

(iv) *Strength of Military Forces.* There was little alteration in the numbers serving in the Australian military forces from the institution of the Commonwealth to the year of the introduction of the compulsory training system. From 1913 to 1918, however, the annual increase was considerable. As a result of the International Conference which met at Washington on 11th November, 1921, it was decided to continue the universal training law, but its operation was restricted to the more populous centres and to certain quotas only. From 1st July, 1922 to 30th June, 1925, training in the Senior Cadets was limited to two quotas instead of four, and in the Citizen Forces to two quotas instead of seven. On 1st July, 1925 Senior Cadet training was reduced to one quota only, while Citizen Force training was increased to three quotas. These conditions remained in force until 1st November, 1929, when the constitution of the forces on a voluntary basis was adopted. During the period last mentioned Senior Cadet training commenced on 1st July of the year in which Senior Cadets reached the age of 17 years, and on 1st July of the following year they were allotted to the Citizen Forces, in which training continued until 30th June of the year in which they attained the age of 21 years. Notwithstanding the reduction in training, all males residing within 5 miles of a training centre were required to register during the months of January or February of the year in which they reached the age of 14 years. Junior Cadet training of boys of the ages of 12 and 13 years, which was in abeyance during the years 1922–23 and 1923–24, was also supervised by the Defence Department during the period 1st July, 1925 to 31st October, 1929.

Under the voluntary enlistment system, personnel might enlist for a first period of three years, and on its completion the member concerned might be re-engaged for successive periods of two or three years until he reached the age for retirement.

In 1947, to provide a basis for the establishment of the post-war Army, the Commonwealth Government approved a programme extending over a period of five years to 1952. This programme provides for a Regular Army of a total strength of 20,000 all ranks, and a Citizen Force of a total strength of 50,000 all ranks. The strength of the Australian Military Forces (Australian Regular Army and Citizen Military Forces not including Cadets) at the 30th June, 1949 was 30,801. Enlistment in the Australian Military Forces is restricted to British subjects resident in Australia with a minimum age of 18 years.

The Australian Cadet Corps is a voluntary organization comprised of Senior Cadet units raised at educational establishments in all States of the Commonwealth. It serves as a training ground to provide, to some extent, the future officers and non-commissioned officers of the Australian Military Forces, and, as such, occupies a foremost position in the scheme of national defence. The minimum age for enrolment in school units is the year in which the applicant reaches the age of 14 years, and cadets, who in the large majority of schools receive a free issue of A.M.F. pattern uniform, may remain in the Cadet Corps until they cease to be pupils of the educational establishments concerned. A few units retain their own pattern school uniform and are not issued with A.M.F. pattern uniforms. Provision is made for the appointment of officers, warrant and non-commissioned officers on an authorized establishment scale from within school units. School cadets' units are not affiliated with Citizen Military Force units. The establishment for the whole Corps is 35,000 all ranks, and by December, 1948 the number of cadet units raised was 224 with a total strength of 20,535.

Approval has recently been given for the raising of Regimental Cadet units in close collaboration with Citizen Military Force units. These units are manned by the enrolment of boys who have either left school or are students at schools where no unit of the Cadet Corps is raised. Regimental Cadets wear the same uniform as their parent Citizen Military Force unit with the addition of the word "Cadets" directly under the unit title.

(v) *The Australian Staff College.* Until 1938 the training of staff officers was carried out in the various Military Districts throughout Australia, except in cases where officers were selected from time to time to attend courses abroad. In 1938 an Australian Command and Staff School, located in the original Officers' Mess at Victoria Barracks, Sydney, was established.

Between 1939 and 1945 the training of staff officers was carried out under varying conditions by different schools in accordance with the changing needs of the war.

Early in 1946 the Staff School (Australia) was established at Seymour in Victoria and re-designated the Australian Staff College in conformity with other Empire training establishments for training officers for command and staff appointments. The College was later moved to Queenscliff in Victoria, where it is at present situated.

The courses are of one year's duration and are held from February to December each year. The normal intake is 30 students and, on successfully completing the course, an officer is awarded the symbol "psc". The course is designed to train Grade II, Staff Officers, and students may be nominated by the Royal Australian Navy, the Royal Australian Air Force and the Commonwealth Public Service. Each course includes among the students Army representatives of the other Dominions.

In order to ensure common standards in tactical doctrine and staff and command training throughout the Empire, liaison is maintained with other Staff Colleges; and to this end there is also a reciprocal exchange of instructors. To this extent it may be said that the Australian Staff College is imperial in character.

(vi) *Royal Military College.* The Royal Military College was established in 1911 at Duntroon in the Australian Capital Territory for the purpose of providing trained officers for the Army. The conditions of entry are laid down in the Royal Military College Regulations and provide for admission by "normal", "service" and "special" entries. The length of the normal course is four years; "service" entry cadets attend for three years.

While at the College, cadets receive pay and allowances of 7s. per day in their first year, rising to 11s. per day in their fourth. Uniform maintenance allowance of 1s. per day is additional. The course of instruction is organized into military and civil departments and the instructional staff comprises officers of the army and civilian professors and lecturers. On graduation, cadets are appointed lieutenants in the Australian Regular Army. The College also trains New Zealand cadets for commissions in the New Zealand Permanent Forces under an agreement made with the Government of that Dominion.

(vii) *Rifle Clubs.* The Australian Rifle Club movement, which had its origin in 1888, is provided for in the Defence Act and comprises an Australian Council of State Rifle Associations (which functions in an advisory capacity to the Minister and in the promotion of inter-empire and interstate rifle competitions), State Rifle Associations, District Rifle Club Unions and Rifle Clubs. Prior to 1931 the administration of the organization was the responsibility of the Secretary for Defence. From that year its control passed to the Military Board. This organization continued until the outbreak of the recent war. In 1941 rifle clubs were placed in recess and, with the exception of annual miniature rifle competitions, remained inactive until August, 1946, when approval was given for the re-establishment of the movement on a civilian basis under the control of the Secretary, Department of the Army. When placed in recess, the efficient strength of the rifle club movement was 1,018 clubs and 36,478 members. Approximately 20 per cent. of this number served overseas and a further 60 per cent. performed home service duties during the recent war. Rifle shooting activities were resumed in 1946 and the strength position of the movement as at 30th June, 1949 was 1,037 clubs and 48,155 members.

(viii) *The Australian Battles Nomenclature Committee.* The Minister for the Army gave approval on the 25th July, 1947 for the formation of the Australian Battles Nomenclature Committee and for its terms of reference to be as follows :—

- (a) to tabulate those operations fought in the Pacific Zones in the 1939-45 War which involved the Australian Military Forces ;
- (b) to classify these operations in accordance with a definite system of nomenclature which will denote their relative importance ;
- (c) to define the geographical and chronological limits of each operation ;
- (d) to advise the United Kingdom Battles Nomenclature Committee regarding operations in zones other than the Pacific Zone in which the Australian Military Forces participated.

The inaugural meeting of this Committee was held at Victoria Barracks, Melbourne on 16th December, 1947, under the chairmanship of General Sir Thomas Blamey. At this meeting sub-committees were appointed to study the various campaigns in order to classify the operations into battles, actions and engagements.

3. **1939-45 War.**—(i) *General.* For a detailed account of the part played by the Australian Military Forces in the 1939-45 War, together with a chronological list of important events, see Official Year Book No. 36, pages 1016 to 1022.

(ii) *Gross Enlistments.* For particulars of the gross enlistments in the Australian Military Forces during the 1939-45 War, see Official Year Book No. 37, page 1150.

(iii) *Disbandments.* The Australian Imperial Force was disbanded on the 30th June, 1947, and replaced by the Interim Army. The Australian Women's Army Service, which had been formed on the 29th September, 1941 with the object of enlisting women for the replacement of men in rear areas, was also disbanded on the same date.

(iv) *Casualties.* Particulars of casualties will be found in § 6. following.

(v) *Decorations and Awards.* A list of the numbers of the various decorations and awards conferred appears in § 7. following.

§ 3. Naval Defence.

1. **State Systems.**—Information regarding naval defence systems prior to 1901 will be found in Official Year Book No. 2, p. 1084.

2. **The Present System.**—(i) *General.* (a) *Royal Australian Navy up to end of 1939-45 War.* An outline of the development of Australian Naval policy was given in Official Year Book No. 3, p. 1060 and No. 12, p. 1012. Some account of the building of the Australian Navy, the proposed and modified cost thereof, the compact with the Imperial Government, etc., appears in Official Year Book No. 15, pp. 921 *et seq.* An account of the growth and activities of the Royal Australian Navy during the 1939-45 War is given in Official Year Book No. 36, pp. 1023 *et seq.*

(b) *Post-war Programme.* In June, 1947 the post-war defence policy of the Commonwealth Government was announced by the Minister for Defence. A sum of £250,000,000 was to be expended over a period of five years in the carrying out of an approved programme (see § 1. 3 (ii) above). Of this amount, the Navy was to receive £75,000,000 allotted at the rate of £15,000,000 annually. In June, 1949 the Government allotted a further £45,000,000 to the defence programme. The Navy will receive portion of this sum, part of which will be utilized to finance a resumption of reserve training in 1950.

The following is a summary of the naval programme :—

(1) Ships in Commission—

Fleet: It is proposed that by the end of the programme, the Fleet should consist of :—2 Light Fleet Carriers, 2 Cruisers, 6 Destroyers.

Escort Forces : 3 Frigates.

Surveying Duties : 3 Survey ships and their tenders.

Training Ships : 1 Frigate, 2 Australian Minesweeping Vessels, 3 Air/Sea Rescue Vessels.

Auxiliary Vessels : 1 Ocean-going Tug, 1 Ammunition Carrier, 2 Boom Defence Vessels.

(2) Ships to be retained in Reserve and maintained in good condition against any future emergency—

One Cruiser, 2 Destroyers, 6 Frigates, 1 Sloop, 30 Australian Minesweepers, 39 Miscellaneous Vessels.

(3) Change in Status—On 1st January, 1949 the Royal Australian Navy ceased to be a squadron and assumed the status of a fleet, a fleet being an organization consisting of various types of ships and naval aircraft, capable of undertaking major operations.

(4) Personnel—Recruiting is in progress to raise the strength of the Royal Australian Navy to a total of 14,753, inclusive of air personnel, by 1951-52. This number will comprise 6,756 sea-going forces and 7,997 for shore establishments and pools.

(5) Reserve Training—Training will be resumed as from 1st January, 1950 and will be carried out in each of the capital cities. Training will be voluntary, and members will be asked to undergo 15 days' night and/or Saturday training in their home establishments plus 13 days' continuous training each year in H.M.A. ships or training establishments, including specialist Schools. In addition, payment will be made for further voluntary home training up to a maximum of 12 days. Selected members may undergo special courses up to a limit of six months during the whole of their service in the Reserve, whilst up to 12 months' training or service may be performed in an H.M.A. ship or establishment with similar qualifications. Engagements are for three years. Rates of pay have not been finalized. Provision has been made for the training of 450 officers and 3,550 ratings in the first year.

(6) Naval Aviation—The first stage of the Royal Australian Navy's naval aviation plans has been reached with the commissioning and arrival in Australian waters in May, 1949 of H.M.A.S. *Sydney*, the first of two projected light fleet carriers. An Air Station (H.M.A.S. *Albatross*), where training is proceeding, was opened in August, 1948. Finance provided in the current five-year programme totals £11,976,000 for capital expenditure and £11,432,000 for maintenance.

(7) Ship Construction and Repair—Provision is made for the maintenance in Australia of a nucleus ship construction and repair industry capable of rapid expansion in war. An average sum of £2,500,000 is proposed to be expended annually on the completion of the present destroyer programme for four ships under construction and two to be laid down.

(8) Shore Establishments—There will be shore establishments essential for basing commissioned ships and to provide administrative storing, repair and training facilities. A new base now being established at Manus Island (Admiralties) will replace the present New Guinea Base at Dreger Harbour, New Guinea.

(c) *The Relation of New Weapons.* Careful consideration has been given to the implications of new weapons, and the decisions in regard to the Navy are based on the broad conclusions of great naval powers that these weapons should be introduced by the normal process of evolution, first into existing ships, and later perhaps into an entirely new form of fighting ship. The same authoritative opinion is of the view that there will be no rapid development which will render vessels such as carriers, cruisers and destroyers obsolete within the near future.

(ii) *Naval Board.* The Australian Navy is administered by a Board consisting of the Minister for the Navy with four Naval Members, including a member for Naval Aviation, one Finance Member and the Secretary, Department of the Navy (ex-officio); the seat of administration is at Melbourne.

(iii) *Naval College.* Twenty-eight Cadet Midshipmen entered the Naval College for training in the year commenced January, 1949. In addition, there were seven seventeen-year-old youths enrolled, five for the Supply and Secretariat Branch and two for executive training.

(iv) *Training Establishments.* Flinders Naval Depot, Victoria remains the principal training establishment for ratings in the permanent forces, while several advanced training schools are established in Port Jackson, New South Wales. Air training has begun at Nowra, New South Wales.

(v) *System of Payment.* Since the close of hostilities in August, 1945, the entire pay code of the R.A.N. has been revised and a new code is now operative. A voluntary superannuation scheme became operative during 1948-49, an alternative to the still existent system of accumulating deferred pay.

(vi) *The Australia Naval Station.* Defined limits of the Australia Station will be found in Official Year Book No. 37, page 1152.

(vii) *BCOF.* On 1st October, 1948 the R.A.N. assumed responsibility for British Commonwealth Naval representation in Japan. H.M.A.S. *Commonwealth* is the base establishment at Kure and the R.A.N. maintains one destroyer or one frigate on the Station.

3. *Ships of the Royal Australian Navy.*—The following ships were in commission or in reserve in October, 1949 :—

SHIPS OF THE ROYAL AUSTRALIAN NAVY, OCTOBER, 1949.

Vessel.	Description.	Displacement.
In Commission—		Tons.
<i>Sydney</i>	Aircraft Carrier	14,000
<i>Australia</i>	Cruiser	9,870
<i>Bataan</i>	Destroyer	1,870

4. **Strength of Royal Australian Navy.**—The serving strength of the Royal Australian Naval forces, both permanent and reserves, at 30th June, 1949 is shown below :—

STRENGTH OF ROYAL AUSTRALIAN NAVAL FORCES (PERMANENT AND RESERVES), 30th JUNE, 1949.

Particulars.	Numbers Borne.		
	In Training.	Officers.	Men.
Royal Australian Navy—Sea-going	667	9,247
Emergency List	34	..
Retired	13	..
Royal Australian Naval Auxiliary Services	9	32
Cadet Midshipmen undergoing training at R.A.N. College	88
Royal Australian Naval Reserve (Sea-going)	25	..
Royal Australian Fleet Reserve	7
Royal Australian Naval Reserve	13	8
Royal Australian Naval Volunteer Reserve	41	4
Total	88	802	9,298

5. **Casualties, 1939–45 War.**—Particulars of casualties will be found in § 6. following.

6. **Decorations and Awards, 1939–45 War.**—Particulars of decorations and awards appear in § 7. following.

§ 4. Air Defence.

1. **General.**—A statement respecting the preliminary steps taken in connexion with the development of air defence will be found in Official Year Book No. 18, p. 610, and one on the expansion and development, and zones and operations of the Royal Australian Air Force during the 1939–45 War appears in Official Year Book No. 36, p. 1027.

2. **Administration and Organization.**—The Department of Air is responsible for policy for organization and control of the Royal Australian Air Force. The Air Board is responsible, subject to approved policy, for the control and administration of the Royal Australian Air Force, and is constituted as follows :—Chief of the Air Staff, Air Member for Personnel, Air Member for Engineering and Maintenance, Air Member for Supply and Equipment, and Finance Member. The Secretary, Department of Air, is ex-officio a member of the Air Board.

Head-quarters of the Royal Australian Air Force is located at Melbourne. An Overseas Head-quarters is located at London and an Air Attaché at Washington, U.S.A.

With the exception of certain technical units which are allotted to the direct command of a Maintenance Group, the units of the Royal Australian Air Force are organized in five geographical areas throughout Australia.

The geographical areas of command are—

Southern Area—Head-quarters Southern Area controls Air Force units in Victoria, Tasmania and South Australia.

Eastern Area—Head-quarters Eastern Area controls Air Force units in New South Wales and Southern Queensland.

North-Eastern Area—Head-quarters North-Eastern Area controls Air Force units in northern Queensland, New Guinea and adjacent islands.

North-Western Area—Head-quarters North-Western Area controls Air Force units in Northern Territory.

Western Area—Head-quarters Western Area controls Air Force units in Western Australia.

The organization of the Royal Australian Air Force includes the following types of units :—

- (a) R.A.A.F. Stations ;
- (b) Bomber, Fighter, Transport, Tactical Reconnaissance, Survey, Target Towing, Communication and Search and Rescue Squadrons ;
- (c) Aircraft Depots ;
- (d) Stores Depots ;
- (e) Flying Training, Ground Training, Navigation, Radio and Air Armament Schools ;
- (f) Royal Australian Air Force College ;
- (g) Telecommunication Units ;
- (h) Royal Australian Air Force Staff College.

3. **Aircraft.**—Some of the aircraft which are at present being used in the Royal Australian Air Force are : Bomber Squadrons—Lincolns ; Fighter Squadrons—Mustangs and Vampires ; Transport Squadrons—Dakotas ; General Reconnaissance Squadrons—Catalinas and Lincolns ; Army Co-operation—Mustangs and Lincolns ; Training—Tiger Moths, Wirraways, Oxfords, Dakotas, Lincolns, Ansons and Beaufighters.

4. **Establishment.**—The Royal Australian Air Force establishment, as proposed, will comprise—(a) a Home Defence Organization, (b) Task Force elements and (c) a Training Organization consisting in all of approximately 12,000 personnel.

5. **Casualties, 1939-45 War.**—For particulars of casualties incurred by R.A.A.F. personnel during the 1939-45 War see § 6. following.

6. **Decorations and Awards, 1939-45 War.**—The numbers of decorations and awards won by members of the R.A.A.F. during the 1939-45 War are shown in § 7. following.

§ 5. Enlistments in the Australian Services, 1939 45 War.

For particulars of enlistments in the Australian Services during the 1939-45 War, see Official Year Book No. 37, pp. 1155-6.

§ 6. Casualties : Australian Services, 1939-45 War.

Official Year Book No. 37, pp. 1156-1160, contains information in considerable detail on casualties to members of each of the Australian Fighting Services during the 1939-45 War.

This information is dissected into nature of casualty, theatre of war and zone of operations, but is not repeated in this issue because of the limitations of space.

The following table, which is a brief summary of all casualties to members of the Fighting Services during the 1939-45 War, contains revisions in respect of the Navy which have been received since the previous issue. The figures for the other services are unaltered.

ALL CASUALTIES : AUSTRALIAN SERVICES, 1939-45 WAR.(a)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
Killed, died of wounds, injuries, etc. ..	2,031	21,558	10,264	33,853
Prisoners-of-war escaped, recovered or repatriated	263	20,920	1,876	23,059
Wounded, injured, etc. (cases) ..	579	177,049	3,236	180,864
Total	2,873	219,527	15,376	237,776

(a) Excludes deaths and illnesses from natural causes.

The revisions to the Navy figures, which relate to persons killed, died of wounds, injuries, etc., only, comprise the following changes :—Battle Casualties—War against Germany, from 876 to 903 ; War against Japan, from 953 to 951 ; all theatres, from 1,829 to 1,854. Non-battle Casualties—War against Germany, from 40 to 42 ; War against Japan, from 45 to 57 ; all theatres, from 85 to 99. Non-operational Casualties—Australia, from 64 to 58 ; Overseas, from 26 to 20 ; Total, from 90 to 78. Grand total, from 2,004 to 2,031.

§ 7. Decorations and Awards : Australian Services, 1939-45 War.

The numbers of the various decorations and awards conferred on members of each of the fighting forces for gallantry or other meritorious service during the 1939-45 War were shown in detail on page 1161 of Official Year Book No. 37. The totals, which include some minor revisions since last issue, are as follows :—

DECORATIONS AND AWARDS : AUSTRALIAN SERVICES, 1939-45 WAR.

Decoration or Award.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
British	1,094	10,343	5,222	16,659
Foreign	65	145	174	384
Total	(a)1,159	(b)10,488	(c)5,396	17,043

(a) In addition, 45 decorations or awards were made to British personnel in Australian Services, and one to a civilian with the Australian Services.

(b) In addition, 18 decorations or awards were made to British or Allied personnel on loan to A.M.F., 41 to civilians with A.M.F., and 363 to natives with A.M.F.

(c) Excludes decorations and awards to R.A.F. personnel on loan to R.A.A.F. and to members of R.A.F. who were Australian by birth—particulars are not available.

Foreign awards include those of the United States of America, Russia, Greece, Poland, France, Holland, Belgium and Lebanon.

§ 8. Australian Troops, 1914-18 War.

Particulars of the enlistments, casualties, honours and decorations won, and engagements of the Australian Imperial Force during the 1914-18 War are given in Official Year Book No. 16, pp. 628 *et seq.*

§ 9. Expenditure on Defence.

Details of expenditure on Defence, War (1939-45) Services and Post-war Charges will be found in Chapter XVII.—“Public Finance,” A.—Commonwealth Finance, § 7, pp. 794-6.

§ 10. War Gratuities.

1. **1914-18 War.**—Reference is made in earlier issues of the Official Year Book (*see* No. 15, p. 930) to the bonus payable in accordance with the War Gratuity Acts of 1920 as a war service gratuity to soldiers and sailors who served in the 1914-18 War. Owing to limitations of space this information cannot be repeated, but it may be noted that the gratuity was paid in Treasury Bonds, maturing not later than 31st May, 1924, and bearing interest at 5½ per cent. In necessitous cases payment was made in cash when desired by the person entitled. The first gratuities were made available about the beginning of June, 1920. The total amount paid to 30th June, 1949 was £27,515,036 and bonds amounting to £11,780 had not been redeemed at that date.

2. **1939-45 War.**—Briefly, the War Gratuity Act 1945-1947 provides for payment to members of the Forces of war gratuity (*a*) at the rate of £3 15s. per month of overseas service, subject to a qualifying period of 90 days continuous or 180 days in the aggregate in twelve months, and of certain subsequent periods in Australia, and (*b*) at the rate of 15s. per month of Australian service after 6th December, 1941, subject to a qualifying period of six months' service, other than that for which payment at the overseas rate is made. All members who perform overseas qualifying service will be paid a minimum of twelve months' gratuity at the overseas rate, irrespective of whether the full twelve months period had been completed or not.

In cases of death due to war service either overseas or in Australia, where members of the family were totally dependent on the deceased member, a minimum payment equivalent to three years' gratuity calculated at the overseas gratuity rate may be made. In respect of all other cases of death, overseas and in Australia, due to war service, gratuity at the rate accruing to the member at the date of notification of his death will be continued for a further seven months.

The period of entitlement to gratuity terminated at the date of discharge or on 30th June, 1947, whichever was the earlier. Payment will be made on 3rd March, 1951, or at earlier dates in certain circumstances, and will include compound interest at the rate of 3.25 per cent. per annum on the yearly credit balances. For greater detail on the provisions of the Act *see* Official Year Book No. 36, pp. 1073-4.

A Registrar of War Gratuities controls the register in which are kept the accounts of all persons entitled to war gratuity. The total liability on account of war gratuity is estimated to be about £80,000,000. Provision is made for financing the Act by appropriation from Consolidated Revenue Fund and by borrowing. The War Gratuity Appropriation Act 1948 created a trust account for the payment of gratuities and, from credits of the Import Procurement Suspense, Marine War Risks Insurance, Overseas Shipping and War Damage Fund Trust Accounts, amounts totalling £17,000,000 were made available for that purpose during 1948-49. Total receipts of the War Gratuity Trust Fund during 1948-49 amounted to £33,249,036. Expenditure amounted to £3,197,633 and the balance carried forward amounted to £30,051,403.

§ 11. The Department of Supply and Development.

1. **General.**—On 6th April, 1948 the Department of Munitions (with which the Department of Aircraft Production was amalgamated on the 1st November, 1946) and Department of Supply and Shipping were amalgamated under the name Department of Supply and Development, although certain functions of the Department of Supply and Shipping were taken over by the newly constituted Department of Shipping and Fuel. Records covering munitions production prior to the 1939-45 War appear in earlier issues of this publication (see No. 18, pp. 612-616, and No. 32, p. 241). A statement of the main development in the organization and output of the Department of Munitions during the 1939-45 War, and including the period up to 30th June, 1947, will be found in Official Year Book No. 36 (pp. 1037-1068) and No. 37 (pp. 79, 654-5, 1162-1171). Accounts of aircraft production activities during the 1939-45 War and up to 30th June, 1947 appeared in Official Year Book No. 36 (pp. 1068-1073) and No. 37 (pp. 1167-1170).

2. **Functions of the Department and Acts Administered.**—The functions of the Department of Supply and Development include (a) research, design and development in relation to war *matériel*; (b) the provision or supply of war *matériel*; (c) the manufacture or assembly of aircraft or parts thereof; (d) arrangements for the establishment or extension of industries for purposes of defence; (e) the acquisition, maintenance and disposal of stocks of goods in connexion with defence; and (f) the arrangement or co-ordination of—(i) surveys of Australian industrial capacity and the preparation of plans to ensure the effective operation of industry in time of war, including plans for the decentralization of secondary industries and particularly those relating to defence; and (ii) the investigation and development of Australian sources of supply of goods necessary for the economic security of the Commonwealth in time of war, and, in particular, the investigation and development of additional oil and strategic mineral resources, the production of power alcohol from sugar or other vegetable crops, and the production of oil from coal or shale.

The Acts administered by the Department are as follows:—Aluminium Industry Act 1944; Atomic Energy (Control of Materials) Act 1946; Defence (Transitional Provisions) Act 1946-1948, insofar as it relates to the following National Security Regulations and Orders:—Regulations—Disposal of Commonwealth Property (repealed 5th August, 1949), Minerals (repealed 15th September, 1949), Munitions (repealed 15th September, 1949), Shipbuilding (repealed 15th September, 1949), Supplementary Regulations No. 142, Tinplate Control (repealed 31st December, 1949); Orders—Control of Tinplate Order (repealed 27th October, 1949), Cordage and Fibre Order; Development and Migration Act 1926-1930; Geophysical Survey Act 1928; Northern Australia Survey Act 1934; Petroleum Oil Search Act 1936; Petroleum Oil Search Act 1936 (No. 2); Petroleum Oil Search Act 1940; Petroleum Oil Search Act 1941; Petroleum Prospecting Act 1926-1927; Petroleum Prospecting Act 1928; Supply and Development Act 1939-1948.

3. **Capital Valuations of Government Factories, Laboratories and Establishments.**—The capital valuations of Government factories, laboratories and establishments are shown in the following table.

GOVERNMENT FACTORIES AND ESTABLISHMENTS: CAPITAL VALUATIONS,
30th JUNE, 1949.

(£.)

Establishment.	Land.	Buildings and Works.	Plant and Equipment.	Total.
<i>Ammunition Factories—</i>				
Footscray, Victoria	16,986	835,267	2,370,832	3,223,085
Finsbury, South Australia ..	22,654	243,886	270,280	536,820
<i>Ordnance Factories—</i>

Grand Total.. ..	451,261	11,840,277	18,484,227	30,775,765

NOTE.—These figures do not take into account the capital valuations of Research and Development Branch Establishments, including the Long Range Weapons Base Establishment, Salisbury, the Long Range Weapons Establishment Air Component, Mallala, the Long Range Weapons Establishment Range, Woomera, Defence Research Laboratories, Maribyrnong, and the Aeronautical Research Laboratory, Fishermen's Bend.

4. **Value of Output of Departmental Factories.**—The following table showing the value of output for the years 1946–47 to 1948–49 provides a picture of the peace-time production of the Departmental factories. Figures for previous years are given in Year Book No. 37, pp. 1163–64.

DEPARTMENTAL FACTORIES : VALUE OF OUTPUT.
(£.)

Year.	Aircraft Production.	Ammunition.	Clothing.	Explosives.	Ordnance.	Small Arms.	Total.
1946–47 ..	3,601,745	847,181	337,592	499,272	1,213,998	739,179	7,238,967
1947–48 ..	4,118,319	924,036	347,979	486,646	1,283,689	755,651	7,916,320
1948–49 ..	4,026,354	961,034	451,679	601,749	1,636,053	750,523	8,427,392

5. **Aircraft Production.**—(i) *General.* All Commonwealth Government functions in regard to the manufacture of fighter, bomber and trainer aircraft and of aero engines and of other aircraft components required for Royal Australian Air Force purposes are administered by the Division of Aircraft Production of the Department of Supply and Development. Aircraft repair and overhaul activities carried out for the R.A.A.F. in civilian establishments, as distinct from the Service workshops conducted by the R.A.A.F., are also a function of the Division of Aircraft Production, together with the responsibility of supplying aircraft and engine spare parts.

(ii) *Aircraft, Engine and Other Production.* At 1st July, 1947 the major aircraft manufacturing organizations in Australia were engaged in the production of aircraft and aero engines for military purposes in accordance with a programme which continued unchanged throughout the period 1st July, 1947 to 30th June, 1949, inclusive. Lincoln heavy bombers and Tudor military transport were on order at Government Aircraft Factories, Mosquito fighter-bombers and Vampire jet-fighters at De Havilland Aircraft Pty. Ltd., and Mustang fighters, Rolls Royce Merlin engines and Rolls Royce Nene turbo-jet engines at Commonwealth Aircraft Corporation.

Production of Lincoln and Mustang aircraft continued during 1947–48 and 1948–49 at a nominal rate. The last of the Australian Mosquito aircraft was delivered to the R.A.A.F. by De Havilland Aircraft Pty. Ltd. during July, 1948.

Difficulties experienced with the development of Tudors in the United Kingdom made it undesirable to proceed with the manufacture of this type in Australia, and the Tudor project was abandoned in 1948 before the assembly of the first prototype of the aircraft had been undertaken. Deliveries of Rolls Royce Merlin engines to be used for installation in Lincoln heavy bomber aircraft continued from the Engine Factory during the period. The first of the Rolls Royce Nene turbo-jet engines manufactured in Australia were delivered by the Commonwealth Aircraft Corporation during December, 1948 to De Havilland Aircraft Pty. Ltd. for installation in Vampire airframes. The first Australian Vampire—the first Australian jet-propelled aircraft of any type—was flown successfully during June, 1949, but had not been handed over to the R.A.A.F. at 30th June, 1949.

Aircraft annexes established during the war for the manufacture of propellers, retractable undercarriages and heavy forgings in light alloy metals continued to function during the two-year period. The Propeller Annexe made propellers for Lincoln and Mustang aircraft, as well as manufacturing spare parts for propellers in service and carrying out an extensive repair and overhaul programme for both service type and commercial aircraft propellers. Undercarriages for Lincoln and Vampire aircraft were in production at the Undercarriage Annexe.

(iii) *New Aircraft Projects.* During 1948 consideration was given by the R.A.A.F. to the selection of new types of bomber and fighter aircraft to follow the Lincoln and the Mustang projects respectively in the aircraft factories. From the point of view of operational performances, all types of jet-propelled aircraft currently in production for

the R.A.F. and Royal Navy were examined by R.A.A.F. officers and aircraft engineers, the object being to ensure that any selections made could be manufactured successfully in Australia. Recommendations of the Joint Mission were still being made as at 30th June, 1949. Another venture well in hand at the same date was the production of an elementary trainer aircraft as an original design project. This work was allotted to the Commonwealth Aircraft Corporation in April, 1949, a specification covering R.A.A.F. requirements having been prepared.

(iv) *Repair and Overhaul.* The R.A.A.F. has as far as practicable returned aircraft and aero engines requiring major overhaul and the incorporation of modifications to the aircraft and engine manufacturers establishments in which they were produced. This work, together with the production of maintenance spare parts, assists the factory managements to retain a reasonably balanced nucleus of experienced aircraft tradesmen by supplementing the restricted programmes of new aircraft and engine manufacture. In the same way, repair and overhaul of twin-row Wasp engines for the R.A.A.F. continued to be handled concurrently by the Commonwealth Aircraft Corporation. At the Aero Engine Factory, in addition to the production of Rolls Royce Merlin engines for Lincoln aircraft, the Company undertook the repair and overhaul of Merlin engines for the R.A.A.F. and the conversion of surplus Merlin engines from Spitfire aircraft to enable them to be used for installation in Mustang aircraft in preference to procuring new engines for the purpose.

(v) *Naval Aviation.* In anticipation of the arrival in Australia of the aircraft carrier *Sydney* in May, 1949, as an addition to the Royal Australian Naval Establishment, arrangements were made by the Division of Aircraft Production to provide the facilities necessary for the repair and overhaul by civilian contractors of the carrier-based aircraft, engines, propellers and accessories. To this end, it was arranged that the repair and overhaul of airframes of the Fairey "Firefly" and Hawker "Sea Fury" aircraft with which the aircraft carrier is equipped would be undertaken by the Fairey Clyde Aviation Co. Ltd., a combination of the interests of the Fairey Aviation Company of England and the Clyde Engineering Company of Sydney. Engines from the two types of aircraft—Rolls Royce "Griffon" and Bristol "Centaurus"—will be allotted to the Engine Factory for attention, and propellers, which are of the Rotol type for both types of aircraft, will be handled by De Havilland Aircraft Pty. Ltd.

6. **Research and Development.**—(i) *General.* The Research and Development Branch under the Chief Scientist is responsible for defence research and development projects in Australia, and will be divided into two sections as follows, each under a controller:—(a) the Long Range Weapons Project, and (b) Defence Research and Development.

Projects undertaken require approval of the Defence Department from the policy aspect, but executive work follows in the appropriate establishment which operates in close consultation with the armed forces.

The projects and establishments which come under the control of the Branch are dealt with hereunder.

(ii) *Joint United Kingdom-Australian Long Range Weapons Project.* (a) *General.* The Joint United Kingdom-Australian Long Range Weapons Project represents an undertaking shared between the United Kingdom Government and the Commonwealth of Australia, in connexion with the provision of facilities necessary to develop and test long range weapons.

The plan is based on the provision of ranges with the necessary instrumentation, and provides not only for such research and development in the long range weapons field as may be requisite (e.g. instrumentation), but it is also a potential for experiments in other defence research weapons.

The Long Range Weapons Organization under the direction of the Chief Scientist, Department of Supply and Development, consists of three units, all situated in South Australia, and working as a single entity under the Chief Superintendent. Reference to each of these establishments follows.

(b) *The Long Range Weapons Establishment, Salisbury.* The primary purpose of this establishment is to undertake research and development work connected with trials, assessment of results, and with the provision and improvement of equipment used on the range. As facilities at Salisbury grow it is possible that additional lines of research and development will be undertaken.

(c) *Long Range Weapons Establishment Air Component, Mallala.* The Long Range Weapons Establishment Air Component is charged with the two functions of transport (No. 34 Communications Squadron R.A.A.F.) and experimental flight operations (Detachment from Aero Research and Development Unit R.A.A.F.). The transport work so far has entailed over 1,600 hours flying. Several hundred hours had been flown on experimental work.

(d) *Long Range Weapons Establishment Range, Woomera.* The Long Range Weapons Establishment Range has been planned to provide all services and facilities necessary to carry out large scale experiments as required. Facilities being provided at Woomera may be divided into two divisions:—(i) *Administrative Facilities*, and (ii) *Technical Facilities.* *Administrative Facilities*—These include a village to house 2,000 persons with amenities such as a school, hotel, tennis courts, a swimming pool, games oval, golf course, shops, sewerage, etc. Buildings will be mainly in permanent brick construction, but in order to provide immediate living quarters much of the work done so far has been in temporary (i.e. timber) construction. *Water Supply*—July, 1949, saw the completion of the 107 mile pipe-line from Port Augusta, so that water from the Murray River is now available at Woomera. Total distance from the Murray is 283 miles. *Technical Facilities*—The Technical Area of the Range is in permanent construction and most of the buildings will be air-conditioned. The Administration building is almost ready for occupation, and others are approaching completion. The range operating personnel will shortly be accommodated in more adequate workshops and offices. *Air Field*—Good progress is being made in airfield constructions with runways, hangar accommodation and all facilities for both experimental work and aircraft servicing. *Main Missile Range*—The Main Missile Range is located at a distance from the technical establishment and Woomera village. It is here that the various missiles and test vehicles are fired, flown or dropped, the term used depending on whether the missile or test vehicle partakes of the nature of a rocket projectile or of other types of missiles. The Long Range Weapons Establishment Range is in reality a group of ranges each designed to satisfy not only the requirements of the moment, but capable of extension by adding equipment to meet future requirements. *Contribution of the Services*—The range operating personnel is provided largely by the R.A.N., the Army and the R.A.A.F., with the Army assuming the chief administrative responsibility. There are a number of civilian personnel, both scientific and administrative. Although major construction work is being carried out by the Department of Works and Housing, the armed services are also contributing. No. 1 Line Construction Project Squadron, Royal Australian Corps of Signals, No. 1 Field Squadron, Royal Australian Engineers, and No. 2 Air Field Construction Squadron R.A.A.F. are actively engaged.

(iii) *Defence Research Laboratories.* Pending clarification of the part to be played by the Defence Research Laboratories, Maribyrnong, Victoria, in the Australian programme of research and development for defence, the work of the establishment is, in the main, on the lines determined at the end of the 1939-45 War. The greater part of the work has comprised testing (in its broad sense, i.e., including the calibration of instruments) and investigational work of a short-term nature directed to meeting the needs of Service and other Government departments and secondary industry at large. There has been an appreciable volume of longer term research and developmental work. This has been concerned either with specific defence projects, notably in the case of the Explosives and Ammunition Section, or with subjects of more general interest and application, such as the improvement of materials and articles produced in industry, the formulation of standards and rationalization of specifications, and the development of laboratory techniques of measurement and evaluation.

The General Superintendent, in his report for the year ended 30th June, 1949, remarks that it has been clear that, to enable industry to develop along the lines essential to defence, the frontiers of the work of the Defence Research Laboratories will have to be extended both by the entering of new fields and the enlargement of existing ones. Plans for such extensions are, however, being integrated with broader departmental plans for defence research and development.

The work of each section of the Laboratories is outlined below :—*General Chemistry*—Paints and allied materials; textiles and mycology; lubricants, corrosion preventives and packaging; organic chemistry; production of gratiules; miscellaneous service stores. *Chemical Defence*—Gas absorption at activated surfaces; generation of aerosols; atmospheric pollution and air filtration; detection and estimation of gases, vapours and dust in air; protection from, and elimination of, toxic industrial hazards; applied infra-red spectrometry; respirators and other protective equipment; physical and chemical investigations and advice on chemical warfare problems; peace-time uses of chemical warfare materials. *Explosives and Ammunition*—Service explosives and ammunition—problems relating to their design, manufacture, testing, uses and storage. *Metallurgy "A"*—Physical metallurgy; corrosion and metal protection; electroplating; spectrographic analysis; chemical analysis of metals and alloys. *Metallurgy "B"*—Foundry metallurgy; welding metallurgy; industrial radiography; non-destructive testing; photography; pyrometry. *Engineering*—Investigation of fatigue of metals; calibration of load and pressure measuring instruments and testing machines; mechanical testing of metals, rubber, plastics, cordage and other materials; photoelastic methods; design and construction of laboratory equipment. *Metrology*—Maintenance of standards of mass, length and time; design and examination of gauges; testing of measuring instruments, gears and gear-cutting tools, machine tools, balances, weights, volumetric glassware, barometers and time-measuring apparatus; mathematical analysis. *Physics, Optics*—Design of optical systems, including reflecting and microscope objectives; phase-contrast microscopy; interferometry; spectrophotometry; goniometry, infra-red investigations; heat and thermometry; general physics; glass-working, mechanical workshops. *Electricity*—Electronics, including design and construction of special equipment for high voltage low-power supplies, measurement of very short time intervals; high vacua; linear accelerator; dielectric studies; electrical calibrations; magnetism; fine instruments workshop. *Crystal Physics Group*—X-ray diffraction; electron diffraction and electron microscopy and their application to problems in chemistry, physics and metallurgy. *Technical Information Section*—This has a large library of books, periodicals and other publications and unpublished documents on pure and applied physics and chemistry, metallurgy, electrical and mechanical engineering. In collaboration with the laboratory sections it supplies an information service to government departments and industry. A publications unit edits official publications of the laboratories including reports and circulars and, in collaboration with the General Chemistry Section, the monthly periodical *Paint Notes*. *New South Wales Division*—This has a metallurgical laboratory at Lidcombe and a chemical one at Villawood, but these are being consolidated in new head-quarters at Alexandria. Its range of laboratory, advisory and technical information work covers physical metallurgy, industrial radiography, corrosion and metal protection, metallurgical analysis, general chemical analysis and testing, including paint technology. The bulk of the laboratory work has been concerned with solving the day-to-day problems of production. *South Australia Branch*—This branch was opened at Finsbury in 1947 and has since expanded steadily. It has sections for work on physical metallurgy, industrial radiography, chemical metallurgy and pyrometry. Recent developments include a widening variety of chemical work and the calibration and adjustment of electrical instruments, with an increasing amount of advisory and technical information service to industry.

(iv) *Aeronautical Research Laboratories*. The Aeronautical Research Laboratories were established by the Council for Scientific and Industrial Research in 1937, and the first buildings, at Fishermen's Bend, Melbourne, were occupied early in 1940. Fundamental research in aeronautical science, as well as industry, was carried out for the

R.A.A.F. and for civil aviation. In February, 1949 the laboratories became part of the Research and Development Branch of the Department of Supply and Development. Work requested by other organizations is arranged for either at the laboratories or elsewhere. Giving more emphasis to defence research aspects, the work, with appropriate experimental facilities, is organized under the following sections: *Gasdynamics*—The fundamental aspects of aerodynamics are investigated, e.g., high speed flow and turbulence. The section is equipped with a variable pressure high speed subsonic wind tunnel, and two special low turbulence tunnels. *Applied Aerodynamics*—This section deals with the problems of the design of the aeroplane such as control, stability and boundary layer flow. It includes a flight research group working in conjunction with the R.A.A.F. The main item of equipment is an atmospheric pressure wind tunnel. *Structures and Materials*—Characteristics of the load carrying structure are investigated both from the point of view of the efficiency of the structure and of its life under operating conditions. A very large range of mechanical testing equipment is available, including a structural test bay 120 feet by 80 feet for testing wings and large aircraft components, a 600,000 lb. universal testing machine and a tyre and undercarriage testing machine. *Physical Metallurgy*—The materials of aircraft and aero engine construction are studied, particular attention being paid to fatigue, to high temperature materials, to corrosion and to ageing phenomena. *Engines and Fuels*—The power plant, its installation and associated problems are investigated, gas turbines receiving particular attention. A very well equipped combustion laboratory is included in the wide range of engine testing equipment available. *Instrumentation and Electronics*—The main work of this section is the development and construction of special instrumentation required by the other sections for research purposes.

7. **Liquidations.**—Overall realizations on surplus property for the three years ended 30th June, 1949 totalled £19,869,896. For 1946–47 the total was £10,908,825 (liquidations £5,871,924, Division of Aircraft Production £875,799 and machine tools £4,161,102); for 1947–48 £6,750,676 (liquidations £4,914,584, Division of Aircraft Production £661,790, and machine tools £1,180,302); and for 1948–49 £2,204,395 (liquidations £1,933,784, Division of Aircraft Production £152,030 and machine tools £118,581).

8. **Directorate of Supply.**—(a) *General.* The Directorate of Supply was established under the Supply and Development (Administrative) Regulations in 1943 for the purpose of purchasing supplies or arranging services for War Departments. Provision has been made in the amended Supply and Development Act 1939–1948 for the Directorate to continue these functions. Under the latter Regulations the Directorate also assumes the additional responsibility of arranging for the sale or disposal, on behalf of the Department of Supply and Development, the Department of the Navy, the Department of the Army, and the Department of Air, of all surplus or unserviceable property, war matériel, goods and services approved for disposal.

(b) *Disposals.* The Directorate continues, broadly, the policy developed by the Commonwealth Disposals Commission, which was designed mainly to ensure an orderly disposal of surplus war goods at fair market prices.

(c) *Purchases.* The policy of the Directorate is to purchase supplies and foodstuffs for the Naval, Military and Air Forces as far as possible by public tender, as provided by Treasury Regulations.

(d) *Administrative Organization.* The Directorate is situated in Melbourne, and the approving authority for the arranging of contracts is the Contract Board, comprising representatives of the Department of Supply and Development, the Department of the Navy, the Department of the Army and the Department of Air. The Directorate is represented in States other than Victoria by a district organization which also operates in conjunction with a District Contract Board as the approving authority.

9. **Commonwealth Disposals Commission.**—The constitution and function of the Commonwealth Disposals Commission, its policy and procedure and an outline of its activities are recorded in Official Year Book No. 37 (see pp. 1194–6). The Commission comprised two industrialists, two members of the Commonwealth Public Service, and a representative of the Trade Union movement.

The basic principles and methods of disposal adopted by the Commission provided for meeting the needs of Commonwealth and State Departments. Special consideration was given to the requirements of overseas relief organizations, the Red Cross and Australian hospitals and bodies engaged in educational, charitable, health and general

community activities. A wide range of equipment, particularly tools of trade required for rehabilitation purposes, was sold to ex-servicemen who were sponsored by the Repatriation authorities. After the requirements of these priorities were met, the main avenue of disposal was through trade channels and by public tender and auction.

During the five years of its existence, over 124,000 motor vehicles were placed on the roads, of which 70 per cent. found their way to rural areas; thousands of Army tractors and armoured fighting vehicles are to-day in use by municipal authorities, land-owners and industry generally; whole camps and thousands of hutments have been diverted to ease the housing problem; millions of yards of textiles and countless items of clothing have found their way into the economy, including free issues of 670,000 garments and blankets to 260 different charitable institutions; numerous war factories and warehouses have been sold for post-war purposes; thousands of machine tools are being used by industry to make good the lag in production for civilian purposes and by Technical Colleges to train ex-servicemen in peace-time pursuits; aviation authorities are using large numbers of surplus aircraft for passenger and goods traffic; a great variety of ships and small craft have been put back into service to make good the shortage of shipping and to aid the fishing industry.

After five years, during which it disposed of surplus war-time assets to a total value of more than £130,000,000, the Commission ceased to function as from 31st July, 1949. Its remaining duties were taken over by the Disposals Division of the Directorate of Supply, Department of Supply and Development. About 70 per cent. of Australian production in the final stages of the 1939-45 War was being devoted to defence needs, and soon after the war ended much of the stock-pile of materials and equipment owned by the Government, and by many of the factories which had produced it, became surplus to requirements. These assets, in huge quantities, were scattered over the whole of the Commonwealth, in New Guinea and across the northern islands from the Solomons to Borneo. In the following table the total realizations of the Commission over the period of its existence, namely from 4th September, 1944 to 31st July, 1949, are classified according to (a) commodities and (b) holding department or authority.

COMMONWEALTH DISPOSALS COMMISSION : REALIZATIONS FROM SEPTEMBER, 1944 TO JULY, 1949, CLASSIFIED ACCORDING TO COMMODITIES AND HOLDING DEPARTMENT OR AUTHORITY.
(£'000.)

Particulars.	Realiza- tions.	Particulars.	Realiza- tions.
Commodities—		Holding Department or Authority—continued.	
Crude Materials	864	Army—continued	
Basic Materials and Pro- duction	35,658	Sales Nauru—Ocean Is- land	29
End Products	80,068	Sales Borneo—Morotai ..	6,735
Unclassified Sales	18,599	Salvage	1,051
		Air—	
Total Realizations	135,189	Sales Borneo—Morotai ..	795
		Aircraft	1,228

Aircraft Production ..	3,467	Other Departments ..	8,958
Works and Housing ..	3,834	Auctions (unclassified items)(b)	11,040
Army Mechanical Trans- port	13,978		
Army—		Total Realizations	135,189
General	32,570		

(a) Includes auction sales.

(b) Excludes real property sales by auction.

10. **Tinplate Control.**—Throughout the 1939-45 War assured supplies of tinplate were essential to the packaging of foods for Australian and Allied troops. With this objective the Commonwealth Government established a Commonwealth Tinplate Board, comprising representatives of the industrial and Departmental interests concerned in the availability of adequate supplies, not only for the canning of foodstuffs, but also for more direct war purposes. This Board was replaced on 31st December, 1946 by the Commonwealth Tinplate Advisory Committee and at the same time a Controller of Tinplate was appointed.

Over the eight years ended 30th June, 1949 Australian consumption of tinplate averaged 110,000 tons per annum. Upwards of 85 per cent. is used for the canning of foodstuffs. Most canning factories run at peak capacity in the fruit-picking season, and keep their key personnel in employment during other months of the year in handling such packs as jam from fruit pulp, soup, vegetables, meat and spaghetti.

Australia's tinplate supplies are drawn from the United Kingdom and the United States of America, but during 1949 plans for the establishment of a tinplate mill at Port Kembla were further advanced. Tinplate is rolled to rigid specifications many months in advance of its permanent use in the form of cans.

Control over the use of tinplate in Australia was abolished on 12th October, 1949, but the services of the Committee are being retained by the Commonwealth for advice in the matter of overseas supplies.

11. **Bureau of Mineral Resources, Geology and Geophysics.**—An account of this section was given in the Official Year Book No. 37, pp. 849-50. This matter is further revised and extended in this edition of the Year Book, p. 889.

12. **Stores and Transport Branch.**—This Branch now functions as the central authority, which is responsible for providing all storage and transport facilities necessary to meet the official requirements of Commonwealth Departments and authorities. It has branches in all States and agents in Canberra and Townsville, Queensland.

At the 30th June, 1949 it had under its control land, buildings, plant and machinery, valued at over £4,000,000, and 4,000,000 square feet of storage space, of which 3,600,000 was Government-owned and the balance held under tenancy.

13. **Employment.**—Employment in administrative sections of the Department of Supply and Development and at Government Factories and Establishments at the 30th June, 1939, 1943 (the peak of war-time employment) and 1945 to 1949 was as follows. The table illustrates the rise during the war period, and the subsequent decline, of female employment in the factories.

ADMINISTRATIVE OFFICES AND GOVERNMENT FACTORIES AND ESTABLISHMENTS : EMPLOYMENT.

30th June—	Administrative Offices.			Government Factories and Establishments.			Total.

(a) Munitions only. (b) Includes Aircraft Production in addition to Munitions. (c) Includes Aircraft Production and Supply and Mineral Resources in addition to Munitions.

14. **Finance and Accounts.**—(i) *General.* The expenditure during the years 1944-45 to 1948-49 is shown in the tables which follow. The first table shows the total expenditure, while the second shows details of expenditure under the various trust funds. Apart from Defence Research Laboratories, Research and Development is not included in these figures.

(ii) *Total Expenditure.* The table following shows the total expenditure incurred on account of the Department during the years 1944-45 to 1948-49 inclusive.

SUPPLY AND DEVELOPMENT : TOTAL EXPENDITURE.

(£'000.)

Particulars.	1944-45. (a)(b)	1945-46. (a)(b)	1946-47. (b)	1947-48. (c)	1948-49. (d)

(a) Department of Aircraft Production.

(b) Department of Supply and Shipping.

15. *Australian Shipbuilding Board.*—(i) *General.* The functions of the Board were described in issue No. 37 of this publication (p. 1170). The Shipping Act 1949 provided for replacement by Australian-built vessels of all ships 24 years and over trading on the Australian coast. In order to bring the costs of such replacement vessels within parity of the United Kingdom costs, subsidy of no more than 25 per cent. was granted. The head office of the Board is in Sydney.

(ii) *Construction Programme.* The programme, which underwent many changes to conform with altered requirements, now consists of 13 "A" Class, 9,000 D.W.T. freighters; 14 "B" Class, 6,000 D.W.T. freighters; 10 "D" Class, 3,000 D.W.T. freighters; 2 "D/A" Class, 3,000 D.W.T. freighters; 5 "E" Class, 700 D.W.T. freighters; 2 Union S.S. Coy. of N.Z., 3,000 D.W.T. freighters; 24 Wooden vessels, 300 D.W.T. freighters; and one 1,000 ton Floating Dock.

Important additions are the two vessels for the Union Steamship Coy. Ltd. of New Zealand and two "B" Class, 6,000 D.W.T. vessels for Huddart Parker Ltd. and the Adelaide S.S. Pty. Ltd. respectively.

AUSTRALIAN SHIPBUILDING BOARD : SUMMARY OF CONSTRUCTION AS AT 30th JUNE, 1949.

Class.	Completed.	Under Construction.	Not yet commenced.	Total.
"A"	13	13
"B"	2	4 { 2 B.H.P. .. 2 Evans Deakin ..	8 { 4 Mort's .. 4 Evans Deakin .. 21	14
"C"	21
"D"	8	2 (State Dockyard)	10
"D/A"	2 (Evans Deakin) ..	2
"E"	4	1 (Walkers Ltd.)	5
Union S.S. Coy of N.Z.	2 (State Dockyard)	2
300-ton Wooden Vessels	24	24
Total	51	7	33	91

In addition to the foregoing the 1,000 ton floating dock has been completed for the Department of the Navy.

(iii) *Ship Repair Facilities.* War-time control of ship repair ceased in 1946. Repair facilities, however, are still fully employed with reconversions and general repairs.

16. **Australian Aluminium Production Commission.**—Basic plans for the manufacture of aluminium ingot in Australia were approved by the Commonwealth Government in April, 1941 as a defence measure designed to make this country independent of oversea supplies. In April, 1944 an agreement was made between the Commonwealth and Tasmanian Governments for the establishment of the industry in Tasmania. The Australian Aluminium Production Commission, consisting of two representatives and two deputies acting for the Commonwealth and an equal number of representatives and deputies for Tasmania, was constituted on 1st May, 1945. Finance for the undertaking is provided by a fund of £3,000,000 to which contributions on a £1 for £1 basis are made by the Commonwealth and Tasmanian Governments.

Workable deposits of bauxite (aluminium ore) have been proved in New South Wales, Victoria and Tasmania, the largest deposits being located in the Inverell district of northern New South Wales, where reserves exceeding 8 million tons have been brought under Commission control. A combined alumina and reduction plant is being erected at Bell Bay, northern Tasmania, to which power will be transmitted from a generating station at Trevallyn, near Launceston. Large quantities of plant and equipment have been purchased, and construction work is proceeding with the object of completing the project in 1951. The works will have an output of 13,000 tons of ingot annually.

CHAPTER XXVII.

REPATRIATION.

§ 1. General.

An outline of the activities leading up to the formation of the Commonwealth Repatriation Commission was given in Official Year Book No. 15, p. 931. Some account was given also in the Official Year Book referred to, and in subsequent issues, of the policy and general activities of the Department, while detailed information was incorporated in regard to such matters as sustenance rates and pensions to soldiers and dependants. (*See* Official Year Book No. 17, pp. 598–601.) In 1943 the Australian Soldiers' Repatriation Act was amended by the incorporation of the recommendations of the Parliamentary Committee appointed to inquire into pensions and repatriation benefits. A general increase was made of approximately 20 per cent. in the rates of war pensions and increases were also made in other repatriation benefits.

The main activities of the Repatriation Commission at 30th June, 1949 were confined to the grant, review and assessment of war and service pensions, the provision of medical treatment, payment of re-employment allowances, vocational training of the more seriously disabled members, the renewal and repair of artificial replacements and surgical appliances, the grant and review of sustenance and living allowances and the administration of the Soldiers' Children Education Scheme.

§ 2. War Pensions.

1. **General.**—Provision for the payment of war pensions to soldiers and their dependants was made by the Commonwealth Parliament in the War Pensions Act 1914, which came into operation on 21st December, 1914. This Act was repealed in 1920 by the Australian Soldiers' Repatriation Act. Particulars regarding pensions payable under both these Acts as amended are given on page 210 of Official Year Book No. 34. Owing to limitations of space only some of the main features relating to war pensions under the Australian Soldiers' Repatriation Act 1920–1949 are shown in the following paragraphs:—

(i) *Eligibility for Pension.* There has been a considerable widening of the provision in this respect, to the benefit, mainly, of members of the Citizen Military Forces who have not served outside Australia. These provisions are summarized as follows:—

- (a) A member of the Forces who served (1) outside Australia, (2) in the Territories of Australia, such as Papua and New Guinea, or (3) within Australia in circumstances which can be regarded as actual combat against the enemy, is covered for war pension purposes in respect of incapacity or death which may result from any occurrence happening during the whole period of service.
- (b) In other cases where a member served only in Australia, incapacity or death to be pensionable must have been attributable to service.
- (c) There is a third ground applicable to all in (a) and (b) who have had at least six month's camp service. This provides that, where a condition pre-existed enlistment, a pension may accrue if it is considered that such condition was aggravated by service.

(ii) *Ordinary Rates.* Where the daily rate of service pay was not in excess of 19s., the ordinary rate of pension for total incapacity is £5 10s. per fortnight. Where the daily service pay exceeded 19s., the ordinary rate of pension for total incapacity increases to a maximum rate of £7 6s. per fortnight according to the rate of pay. The wife of a totally incapacitated member of the Forces receives £2 8s., and for each child under 16 years of age 18s. per fortnight.

(iii) *Supplementation of Pension.* Where a member in receipt of a pension at the maximum rate is, because of his war disability, temporarily (for at least three months) precluded from earning, an additional pension may be granted as would bring the total pension to a member up to £10 12s. per fortnight.

(iv) *Women's Nursing and Auxiliary Services.* Members of Women's Services are now entitled to pensions and other benefits as prescribed in the Act. Pension scales are those applicable to male members of the Forces in receipt of similar rates of pay.

(v) *Tuberculosis Cases.* In the case of a member of the Forces who served in a theatre of war, and, at any time after discharge became or becomes incapacitated, or died or dies, from pulmonary tuberculosis, war pension is payable, and medical treatment is provided on application as if the incapacity or death resulted from an occurrence on service. (See also § 3. Service Pensions.)

(vi) *Special Rates.* Those who have been totally blinded as the result of war service and those who are permanently totally incapacitated receive, as from 28th October, 1948, special pensions of £10 12s. per fortnight. In addition, an attendant's allowance of £2 8s. per fortnight is payable to the war-blinded and to certain others who are deemed to be in need of an attendant. The wife and any children receive the same rates as shown in par. (ii).

(vii) *Specific Disabilities.* In cases where the disability is amputation of a limb or limbs or total loss of vision in one eye, amounts ranging from 9s. to £5 2s. per fortnight are payable as from 10th July, 1947, in addition to the statutory rate of pension and, in certain double amputation cases, allowances are payable for an attendant up to £4 16s. per fortnight.

(viii) *Time Limit for Wives.* The time limit within which women must marry in order to be eligible as wives for pension in respect of the 1939-45 War has been extended from seven years to fifteen years from the date of discharge of the member. The children of any such marriage, whenever born, are also eligible. For the 1914-18 War the time limit for wives, i.e., 30th June, 1938, remains, but in certain cases where a member of the Forces has married since that date and has been accepted as totally and permanently incapacitated, an allowance not exceeding £2 8s. per fortnight may be granted to him in respect of his wife, provided, by reason of his war disability, she performs duties essential to his welfare.

(ix) *Rates of Pensions in respect of Death.* (a) *Widows.* Where a member, whose daily rate of service pay was not in excess of 27s. 6d., dies as a result of war service, the rate of pension payable to his widow as from 28th October, 1948 is £6 per fortnight. Where the service pay exceeded 27s. 6d., the rate of pension is higher, ranging from £6 9s. to £7 16s. per fortnight.

(b) *Children of Member.* The first child (under sixteen years) receives a pension of 35s. and each subsequent child 25s. per fortnight. From 2nd October, 1947 a domestic allowance of 15s. per fortnight is paid in the case of a widow and child, or widow and 2 children, to bring the incomes of such families into better proportion with those of widows and 3 or more children. In the case of children both of whose parents are dead, the rates payable are—each child up to 14 years of age, 35s. and each child over 14 years and up to 16 years of age, 40s. per fortnight. An additional amount of 12s. may be paid to double orphans, but certain conditions apply, including a means test.

(x) *Widowed Mother on Death of Member.* A pension varying from £3 10s. to £7 6s. per fortnight, according to the rate of pay of the member, may be granted to a widowed mother, provided widowhood occurred either prior to or within three years after the death of the member. The pension may be supplemented by payment of an additional amount constituting the difference between the statutory pension and £6 per fortnight or part thereof, according to the extent of other income of the pensioner. The value of property possessed does not affect the issue.

2. *Appeal Tribunals.*—The principal Act was amended as from 1st June, 1929 to create tribunals to hear appeals in regard to war pensions. The War Pensions Entitlement Appeal Tribunal is empowered to hear and decide any appeal by or on behalf of ex-members of the Forces or their dependants against a decision of the Repatriation Commission that an incapacity or the death of an ex-member did not arise out of war service. Assessment Appeal Tribunals were created to hear and decide any appeal against a current assessment or a "Nil" assessment of war pension made by the Repatriation Commission in respect of an incapacity of an ex-member of the Forces which had been accepted as arising out of war service. Provision was made by subsequent legislation to enable the Tribunals to hear appeals by certain members for service pensions.

3. Summary of War Pensions, 1948-49.—At 30th June, 1949 the number of war pensions for the 1914-18 War was 150,338 and for the 1939-45 War 289,777 and the amount paid £9,761,608 and £8,992,884 respectively. The outstanding features for 1948-49 for each war were as follows:—

WAR PENSIONS : SUMMARY, AUSTRALIA, 1948-49.

Particulars.	1914-18 War.	1939-45 War.	Both Wars.
New claims granted	1,902	39,016	40,918
Restorations	491	1,058	1,549
Claims rejected (gross)	768	8,192	8,960
Pensions reviewed	21,438	67,809	89,247
Pensions cancelled or discontinued	4,002	9,415	13,417
Deaths of pensioners	3,314	1,196	4,510
Number of pensions in force at 30th June, 1949 ..	150,338	289,777	440,115
Annual pension liability at 30th June, 1949 £	9,654,011	9,522,250	19,176,261
Amount paid in pensions during the year 1948-49 £	9,761,608	8,992,884	18,754,492

4. Classes of War Pensions, 1948-49.—At 30th June, 1949 special rate pensions of £10 12s. per fortnight were being paid to the following classes of members of the Forces:—

WAR PENSIONS : MEMBERS ON SPECIAL RATES, 30th JUNE, 1949.

Class:	1914-18 War.	1939-45 War.	Both Wars.
Blinded members	178	160	338
Tubercular members	1,086	1,606	2,692
Totally and permanently incapacitated members	4,430	1,155	5,585

The following is an analysis of the total number of new claims granted during 1948-49:—

WAR PENSIONS : NEW CLAIMS GRANTED, 1948-49.

Class.	1914-18 War.	1939-45 War.	Both Wars.
Members	683	10,070	10,753
Wives of members (or husbands of members) ..	539	9,814	10,353
Children	355	18,474	18,829
Other dependants	325	658	983
Total	1,902	39,016	40,918

In the following table the number receiving pensions at 30th June, 1949 is shown for each war for each class of pensioner:—

WAR PENSIONS IN FORCE, 30th JUNE, 1949.

Class.	Number of Pensioners.		
	1914-18 War.	1939-45 War.	Both Wars.
Orphan children	1,317	11,606	12,923
War widows	13,829	8,583	22,412
Members	66,264	99,852	166,116
Children	10,617	92,701	103,318
Wives (or husbands)	52,365	70,221	122,586
Parents	5,631	6,580	12,211
Brothers and sisters	124	163	287
Others	191	71	262
Total	150,338	289,777	440,115

5. Number of War Pensioners and Expenditure, 1948-49.—The following table shows the number of pensioners for each war at 30th June, 1949, and the places where payments were made during 1948-49:—

WAR PENSIONS : NUMBER OF PENSIONERS AND EXPENDITURE, 1948-49.

Where Paid.	Number of War Pensioners.				Expenditure. (£.)

§ 3. Service Pensions.

1. General.—The payment of service pensions was provided for in the Australian Soldiers' Repatriation Act 1935, and the scheme has operated since 1st January, 1936.

Originally fixed on a lower scale, the rate of service pension for a member of the Forces now conforms to the rate of the age or invalid pension which from 28th October, 1948 was £4 5s. per fortnight. The maximum rate for the wife of a member is £2 8s. per fortnight; the rate for the first child under 16 years of age was increased to 18s. per fortnight from 7th July, 1949 and 5s. per fortnight is payable for each of the younger children up to three in number. The actual rate payable in any case is determined after taking into consideration all other income received and property (apart from the home and certain other exempted items) owned by the pensioner, and no service pension can be paid where such other income and/or property exceeds certain specified limits. From October, 1948 the "allowed income" is £188 10s. per annum for a single man and £377 per annum in the case of a member and eligible wife. If a member has property exceeding in value £750 (£1,500 for a member and eligible wife) that alone precludes payment of a pension. Pension is assessed according to the amount of income; if the income from all sources is less than the amount shown above, service pension is assessed at such rate

as will, with that other income, bring the total income of the pensioner (including service pension) up to the "allowed income", provided that the pension cannot exceed the maximum rate specified for the particular class of case. If assessable property is held, then a deduction is made from the pension assessed according to income only, the deductions being made at so much for each complete £10 of property in excess of £100 (or £200 in the case of member and eligible wife). The deductions are as follows:—for each £10 from £100 to £450, 9d. per fortnight; for each £10 of the portion from £450 to £750, 1s. 6d. per fortnight.

Female members of the forces were made eligible in 1936 for consideration of service pensions if they embarked for service abroad; previously they must have served in a theatre of war. In the same year an institutional rate of service pension not exceeding 12s. per fortnight was made available. This pension rate from 28th October, 1948 was 30s. per fortnight, and benefits, particularly, inmates of mental asylums, who were previously excluded from the scheme.

Eligibility for service pensions may be established on the following grounds:—

- (a) Sixty years of age or more, provided the member served in a theatre of war, but eligibility on this ground applies only to the member and not to his wife or children. In the case of a female member of the forces, the qualifying age is 55 years, and service abroad, not necessarily in a theatre of war, is sufficient.
- (b) Permanently unemployable, provided the member served in a theatre of war (or, in the case of a female member, served abroad). Under this class pensions may be paid to the member, his wife and children—up to four in number.
- (c) Pulmonary tuberculosis, whether the member served in a theatre of war or not. Under this class, also, pensions are payable to the wife and children—up to four in number.

Only those members who qualify under Class (c) are entitled to receive both service and invalid pensions at the same time.

The eligibility of wives and children for service pension is as follows:—

1914-18 War: wife married, or child born, before 2nd October, 1931.

1939-45 War: wife married within 15 years after discharge of member; any child born of such a marriage.

During the year 1941-42 the scheme was extended to veterans of the South African War 1899-1902, and by amending legislation in 1943 was further extended to members of the Forces of the 1939-45 War.

2. Operations, 1948-49.—The following are the important details of the service pension scheme during 1948-49:—

Claims granted during year—

Members of the Forces	1,770
Wives	475
Children	48
Total	2,293

Claims rejected during year—

Members of the Forces	495
Wives	219
Children	126
Total	840

Service pensions cancelled or discontinued during year	..	1,597
Deaths of pensioners during year	..	805
Pensions in force at 30th June, 1949	..	16,018
Annual pension liability on 30th June, 1949	..	£1,414,101
Amount paid in pensions during the year 1948-49	..	£1,328,955

3. Number of Service Pensioners and Expenditure, 1939-40 to 1948-49.—The following table shows the number of service pensions in force and the expenditure for the ten years 1940 to 1949 :—

SERVICE PENSIONS : SUMMARY, AUSTRALIA.

Number of Service Pensions in Force—								
Year ended 30th June—	Age-Members of Forces.	Permanently Unemployable.		Suffering from Pulmonary Tuberculosis.		Total.	Amount Paid in Pensions. (a)	
		Members of Forces.	Dependants.	Members of Forces.	Dependants.			
							£	
1940 ..	3,858	3,706	4,814	623	999	14,000	472,263	
1941 ..	4,008	3,705	4,734	655	979	14,081	511,103	
1942 ..	4,294	3,772	4,591	650	939	14,246	579,656	
1943 ..	4,270	3,695	4,221	452	646	13,284	660,109	
1944 ..	4,235	3,628	4,025	290	406	12,584	652,534	
1945 ..	4,437	3,702	3,807	258	362	12,566	648,996	
1946 ..	4,971	3,896	3,633	244	345	13,089	804,880	
1947 ..	5,894	4,312	3,657	254	358	14,475	904,120	
1948 ..	6,610	4,660	3,791	271	358	15,690	1,238,112	
1949 ..	7,070	4,613	3,699	271	365	16,018	1,328,955	

(a) Includes amounts in respect of 1939-45 War as follows :—1942-43, £2,314; 1943-44, £6,403; 1944-45, £7,528; 1945-46, £11,372; 1946-47, £15,786; 1947-48, £25,315; and 1948-49, £30,830.

§ 4. Medical Treatment of Returned Soldiers Suffering from War Service Disabilities.

At 30th June, 1949 there were 5,383 in-patients, including a number whose care was undertaken by the Repatriation Commission on behalf of other countries or Commonwealth Departments. There were 248,065 out-patient attendances for treatment during the year, excluding treatments by the 2,387 local medical officers resident in metropolitan and country areas and New Guinea. The expenditure to 30th June, 1949 was £26,043,941.

§ 5. General Benefits and Miscellaneous.

1. Other Departmental Activities.—(i) *General.* Since the outbreak of the 1939-45 War, the ordinary activities of the Department in the way of general benefits for the welfare of members and dependants have continued without interruption. They were mainly education and training of children under the Soldiers' Children Education Scheme, medical benefits for widows and children of deceased members and for widowed mothers of deceased unmarried members, funeral expenses for certain classes of members and dependants, and allowances to certain classes of dependants in lieu of pension.

By amending legislation passed during the 1939-45 War, these benefits were extended for members engaged in that war, and new benefits designed for the re-establishment of members after discharge from the Forces were made available. The re-establishment benefits administered by the Repatriation Commission are :—payments of re-employment allowance while awaiting employment; provision of tools of trade and equipment where such are necessary to the member's employment; transportation expenses to meet the

cost of fares and removal of household belongings, where a member, or member and family, take up employment, a business, or settle on the land; supplementation of wages of apprentices whose apprenticeships were interrupted by war service; re-establishment loans to enable members and widows to establish themselves in businesses, practices or other occupations, including (until the Commonwealth Director of War Service Land Settlement began operations early in 1946) agricultural occupations; gifts up to £75 for furniture to members who are blinded or totally and permanently incapacitated, also to widows with children under 16 years of age; and free passages to Australia for wives, widows and children of members who married abroad (and passages outward from Australia in certain cases of members and dependants).

In the Commonwealth Reconstruction Training Scheme, the Commission's part is the re-establishment of the more seriously disabled where ordinary training is not sufficient, and special means have to be found to overcome each problem. Prior to the inauguration (in 1945) of the full scheme, however, the Commission conducted a tentative scheme to train members who were unable, through war disablement, to return to their pre-war occupations. Up to the time the larger scheme took over those still in training, the Commission had dealt with some 430 cases.

(ii) *Review of General Benefits.* The following paragraph gives particulars (number of cases and expenditure) of the more important general benefits over the period from 8th April, 1918 to 30th June, 1949.

(a) *Employment—*

1914-18 War: Number of applications, 251,200; Expenditure—sustenance while awaiting employment, £1,768,000; tools of trade and fares, etc. (gift), £554,000; tools of trade (loan), £21,800.

1939-45 War: The placing of members in employment was carried out by the Commission for only a short period prior to the inauguration of the Department of Labour and National Service, but the Commission has the responsibility of payment of re-employment allowance, provision of tools of trade and payment of fares and removal expenses. Number of cases and expenditure to 30th June, 1949 are as follows:—Re-employment allowances—66,398, £1,025,249; tools of trade (gift)—252,436, £1,844,308; (loan)—17,048, £251,130; fares and removal expenses, —12,686, £182,714.

(b) *Vocational Training—*

1914-18 War: Number of members completed training in full-time courses, 27,696; expenditure, £4,849,600.

1939-45 War: Members completing apprenticeships—12,611, £3,486,613.

(c) *Business Loans—*

1914-18 War: 6,130, £421,800.

1939-45 War: 22,496, £5,331,431. Allowances pending productivity of business—1,111, £67,468. Fares and removal expenses to member proceeding to a business, £495.

(d) *Furniture Grants—*

1914-18 War: Expenditure—gift (to members blinded or totally and permanently incapacitated and to widows), £75,190; loan (to other classes of members), £1,031,570; total number of cases, 35,400.

1939-45 War: Gift (no loan cases)—widows, 5,013, £345,168; members, 232, £10,771.

(e) *Free Passages—*

1914-18 War: £509,120.

1939-45 War: To Australia—4,634, £304,986; from Australia—65, £9,798.

(f) *Soldiers' Children Education Scheme—**Main Scheme : Full-time training as from 13 years of age.*

Particulars.	1914-18 War.	1939-45 War.
Applications	30,427	5,822
Approved	28,745	5,678
Completed training	22,569	1,810
Withdrawn during training	3,954	237
Awaiting next stage of training	66	113
In training	2,156	3,518
Expenditure	£ 2,882,285	292,759

Minor benefits prior to entrance to main scheme : 1914-18 War, £38,321 ; 1939-45 War, £12,338.

(iii) *Total Expenditure on General Benefits.* The total expenditure on general benefits, apart from war and service pensions, from 8th April, 1918 to 30th June, 1949, was as follows :—1914-18 War, £29,827,323 (including loan, £1,676,014) ; 1939-45 War, £23,769,792 (including loan, £5,587,194). Of the grand total of £53,597,115, the largest amounts were absorbed by medical treatment with £26,000,000, vocational training with £8,500,000, and expenses of providing employment, £5,750,000.

2. *Expenditure of Repatriation Commission, 1948-49.*—The expenditure of the Commission for the year ended 30th June, 1949 was £29,271,842, distributed as follows :—

Repatriation benefits—	£
Loans to members	1,111,685
Grants to members and general expenditure (including maintenance of training schools, medical institutions, etc.) ..	6,023,836
Assistance to members in necessitous circumstances	5,500
Allowances to dependants of members not provided for under the Act	407
Total	7,141,428
Soldiers' Children Education Scheme	160,400
War and Service Pensions	20,268,165
Administrative costs—	£
Salaries	1,454,235
Contingencies	247,614
	1,701,849
Grand total	29,271,842

3. *Settlement on the Land of Returned Service Personnel.*—Reference to the settlement on the land of returned service personnel of both the 1914-18 and 1939-45 Wars will be found in Chapter IV, "Land Tenure and Settlement."

CHAPTER XXVIII.

MISCELLANEOUS.

§ 1. Patents, Trade Marks and Designs.

1. *Patents.*—(i) *General.* The granting of patents is regulated by the Commonwealth Patents Act 1903–1946, which, in regard to principle and practice, has the same general foundation as the Imperial Statutes, modified to suit Australian conditions. The Act is administered by a Commissioner of Patents. Fees totalling £10 are sufficient to obtain letters patent for the Commonwealth of Australia and the Territories of Papua, New Guinea and Norfolk Island. Renewal fees are payable as follows :—£1 before the expiration of the fifth year and an amount progressively increasing by ten shillings before the expiration of each subsequent year up to the fifteenth, when the fee becomes £6. If a renewal fee is not paid when it becomes due, an extension of time up to twelve months may be granted on grounds specified in the Act, and subject to the payment of prescribed fees. An amendment to the Act in September, 1946 permits the public to inspect an application, complete specification and provisional specification (if any) after the complete specification has been lodged. Previously specifications were made public only after an application had been accepted, in many cases as much as a year after the date of lodgment.

(ii) *Summary.* The number of separate inventions in respect of which applications were filed during the years 1939 and 1945 to 1949 is given in the following table, which also shows the number of letters patent sealed in each year :—

PATENTS : AUSTRALIA.

Particulars.	1939.	1945.	1946.	1947.	1948.	1949.
No. of applications ..	5,740	7,349	9,072	8,358	7,709	6,724
No. of applications accompanied by provisional specifications ..	3,161	3,600	4,321	3,727	3,302	3,174
Letters patent sealed during each year ..	3,141	1,248	1,901	2,773	3,381	3,550

(iii) *Revenue.* The revenue of the Commonwealth Patent Office during the years 1939 and 1945 to 1949 is shown hereunder :—

PATENTS : REVENUE, AUSTRALIA.

(£.)

Particulars.	1939.	1945.	1946.	1947.	1948.	1949.
Fees collected under Patents Act	45,581	65,479	83,871	90,278	92,500	85,972
Receipts from publications ..	1,828	1,668	2,293	2,100	2,000	1,826
Total	47,409	67,147	86,164	92,378	94,500	87,798

2. **Trade Marks and Designs.**—(i) *Trade Marks.* Under the Trade Marks Act 1905 the Commissioner of Patents is also Registrar of Trade Marks. This Act has been amended from time to time, the last amendment having been made in 1948. Special provisions for the registration of a “Commonwealth Trade Mark” are contained in the Act of 1905, and are applicable to all goods included in or specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connexion with the manufacture of such goods are fair and reasonable. The Act of 1948 provides for the registration of registered users of trade marks, and also for assignment of trade marks with or without the goodwill of the business concerned.

(ii) *Designs.* The Designs Act 1906, as amended by the Patents, Designs and Trade Marks Act 1910 and the Designs Acts 1912, 1932, 1933 and 1934, is now cited as the Designs Act 1906–1934. Under this Act a Commonwealth Designs Office has been established and the Commissioner of Patents appointed “Registrar of Designs”.

(iii) *Summary.* The following table shows the applications for trade marks and designs received and registered during the years 1939 and 1945 to 1949 :—

TRADE MARKS AND DESIGNS : AUSTRALIA.

Applications.			1939.	1945.	1946.	1947.	1948.	1949.
RECEIVED.								
Trade Marks	1,992	2,792	4,142	4,041	3,724	3,732
Designs	865	981	1,544	1,256	990	948
REGISTERED.								
Trade Marks	1,580	1,003	1,649	2,447	2,386	1,165
Designs	736	668	771	879	1,005	962

(iv) *Revenue.* The revenue of the Trade Marks and Designs Office during the years 1939 and 1946 to 1949 is shown hereunder :—

TRADE MARKS AND DESIGNS : REVENUE, AUSTRALIA.

(£.)

Particulars.	1939.			1946.			1947.			1948.			1949.		
	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.
Fees collected under Commonwealth Acts	15,951	1082	19	19,245	2220	15	26,913	1552	10	28,708	1228	20	20,673	1386	18

No fees in respect of trade marks have been collected under State Acts since 1922.

§ 2. Copyright.

1. **Legislation.**—Copyright is regulated by the Commonwealth Copyright Act 1912–1935 wherein, subject to modifications relating to procedure and remedies, the British Copyright Act of 1911 has been adopted and scheduled to the Australian law.

Reciprocal protection of unpublished works was extended in 1918 to citizens of Australia and of the United States of America under which copyright may be secured in the latter country by registration at the Library of Congress, Washington. The Commonwealth Government promulgated a further Order in Council which came into operation on 1st February, 1923, and extended the provisions of the Copyright Act to the foreign countries of the Copyright Union, subject to the observance of the conditions contained therein.

2. **Applications and Registrations.**—The following table shows under the various headings the number of applications for copyright received and registered, and the revenue obtained for the years 1939 and 1945 to 1949:—

COPYRIGHT : AUSTRALIA.

Particulars.	1939.	1945.	1946.	1947.	1948.	1949.
Applications received—						
Literary	1,438	1,469	1,613	1,571	1,585	1,380
Artistic	53	86	66	63	30	36
International	3

Artistic	38	53	69	66	20	28
International	1
Revenue £	411	377	438	432	404	339

§ 3. Local Option and Reduction of Licences.

For information on local option concerning the sale of fermented and spirituous liquors and the reduction of licences *see* previous issues of the Official Year Book. Issue No. 22 (pp. 1005–8) contains details, by States, of polls taken and of the operations of the Licences Reduction Boards.

§ 4. Lord Howe Island.

Lord Howe Island is situated in latitude 31° 30' south, longitude 159° 5' east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formations of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of Kentia Palm Seed. The land belongs to the Crown and is occupied rent-free on sufferance.

Discovered in 1788, the Island was first settled by a small party of Maoris in 1853; afterwards a colony was settled from Sydney. Constitutionally the Island is a dependency of New South Wales and is included in King, one of the electorates of Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 179 at the Census of 30th June, 1947.

§ 5. Commonwealth Scientific and Industrial Research Organization.

1. **General.**—By the Science and Industry Research Act 1949, the previously existing Commonwealth Council for Scientific and Industrial Research was reorganized under the title of the Commonwealth Scientific and Industrial Research Organization. An account of the organization and work of the former Council, and of the earlier Commonwealth Institute of Science and Industry from which the Council was formed, was given in earlier issues of the Official Year Book. (*See* No. 14, p. 1061 and No. 37, p. 1183.)

2. **Science and Industry Research Act 1949.**—This Act provides for—

- (a) An Executive of the Organization consisting of five members to be appointed by the Governor-General, at least three of whom shall be persons possessing scientific qualifications ;
- (b) an Advisory Council of the Organization consisting of the members of the Executive, the Chairman of each State Committee constituted under the Act, and such other members as the Advisory Council, with the consent of the Minister, co-opts by reason of their scientific knowledge.

The powers and functions of the Organization are as follows :—(a) To initiate and carry out scientific researches in connexion with primary or secondary industries in Australia ; (b) to train research workers and to establish industrial research studentships and fellowships ; (c) to make grants in aid of pure scientific research ; (d) to establish and make grants to industrial research associations in any industry ; (e) to test and standardize scientific apparatus and instruments ; (f) to collect and disseminate scientific and technical information ; (g) to publish scientific and technical reports and periodicals ; and (h) to act as a means of liaison between Australia and other countries in matters of scientific research.

3. **Science and Industry Endowment Act 1926–1949.**—Under this Act, the Government established a fund of £100,000, the income from which is used to provide assistance (a) to persons engaged in scientific research ; and (b) in the training of students in scientific research. Provision is made for gifts or bequests to be made to the fund, which is controlled by a trust consisting of the Executive of the Organization. In accordance with the Act, arrangements have been made to send a number of qualified graduates abroad for training in special fields of work.

4. **Work of the Organization.**—The activities of the Commonwealth Scientific and Industrial Research Organization have necessitated a widespread and adaptable arrangement of its research laboratories. Undesirable centralization has been avoided mainly in two ways. In the first place, the policy has been followed of establishing laboratories in different places in the Commonwealth wherever the necessary facilities, contacts and other suitable conditions could best be found. Secondly, the Act provides for the establishment of a State Committee in each of the six States. These Committees are widely representative of scientific and industrial interests, and advise the Executive or the Advisory Council on general matters and on particular questions of investigation and research.

For about twelve years after its establishment, the work of the previous Council was devoted mainly to the solution of problems affecting the agricultural and pastoral industries. Unlike manufacturing concerns, which can often employ their own scientific staffs, the farmers and the pastoralists are dependent on outside help for the solution of their problems which require research. It was a recognition of the greater need of the primary producer which directed the Council's early policy. However, in 1937, the Commonwealth Government decided to extend the activities of the C.S.I.R. so as to provide assistance to secondary industries, and several laboratories have been established for work in that field ; it was thus in the fortunate position of being able to render to these industries assistance of vital importance almost immediately after the outbreak of war. In fact, the remarkable technological advances and developments in secondary industrial production during the war would to a large extent have been impossible had it not been for the assistance rendered by scientific research, and this may well serve as a forceful illustration of what may be accomplished in times of peace.

For the purpose of carrying out its research work there are established within the Organization a number of Divisions and Sections. The Divisions, of which there are now fourteen, comprise the major establishments for which special laboratory buildings have been erected and equipped ; the Sections generally include establishments which have not reached a stage of development, so far as the scope and magnitude of their operations

are concerned, to justify their designation as Divisions. As the Organization's investigations extend on a Commonwealth-wide basis and as many of the investigations which are being conducted—particularly those concerned with problems affecting the agricultural and pastoral industries—necessitate experimental work in the field, a number of field stations have been established in various parts of Australia.

The Divisions which have been established are as follows :—

- (1) Plant Industry, with main laboratories at Canberra and field stations.
- (2) Entomology, with main laboratories at Canberra and field stations.
- (3) Animal Health and Production, with main laboratories in Melbourne and Sydney and field stations.
- (4) Biochemistry and General Nutrition, with main laboratories at Adelaide and field stations.
- (5) Soils, with main laboratories at Adelaide and extensive operations in the field.
- (6) Forest Products, with main laboratories in Melbourne and field experiments.
- (7) Food Preservation and Transport, with main laboratories at Homebush, New South Wales, and a subsidiary laboratory in Brisbane.
- (8) Fisheries, with main laboratories at Cronulla, New South Wales, and experimental work in coastal waters of Australia.
- (9), (10), (11) Metrology, Physics and Electrotechnology comprising the National Standards Laboratory at Sydney.
- (12) Radiophysics, with main laboratory at Sydney.
- (13) Industrial Chemistry, with laboratories in Melbourne.
- (14) Tribophysics, with laboratories in Melbourne.

The following are the Sections :—

- (1) Commonwealth Research Station, Murray Irrigation Area, Merbein, Victoria.
- (2) Irrigation Research Station, Griffith, New South Wales.
- (3) Radio Research Board, Sydney.
- (4) Dairy Products, Melbourne.
- (5) Mathematical Statistics, Adelaide.
- (6) Mineragraphic Investigations, Melbourne.
- (7) Ore-dressing Investigations, Melbourne and Kalgoorlie.
- (8) Building Research, Melbourne.
- (9) Flax Research, Melbourne.
- (10) Nuclear Physics, Melbourne.
- (11) Physical Metallurgy, Melbourne.
- (12) Meteorological Physics, Melbourne.
- (13) Wool Textile Research Laboratories, Geelong, Melbourne and Sydney.
- (14) Oenological Research, Adelaide.
- (15) Coal Research, Sydney.
- (16) Mathematical Instruments, Sydney.

In addition to its investigational work, the Organization maintains an Information Service which deals with inquiries covering a wide range of scientific and technical subjects. Since the outbreak of war in 1939 Scientific Research Liaison Offices have been established in London and Washington.

The Organization's Head Office, with administrative and executive staff and central library, is in Melbourne. The funds for the Organization are provided from two main sources, viz., from Commonwealth revenue by Parliamentary appropriation and from industry directly or indirectly by way of contributions and special grants. The fact that contributions and grants account for over one-eighth of the total annual expenditure indicates that C.S.I.R.O. has succeeded in a very large measure in gaining the confidence of the public.

The activities of C.S.I.R.O. are now so comprehensive in their scope and so widely distributed that it is not an easy matter to present in a concise form an adequate picture of them. For details of the investigations in progress reference should be made to the Annual Report of the Organization.

§ 6. Australian Institute of Anatomy.

1. *Foundation of Institute.*—The Australian Institute of Anatomy, situated in Canberra, occupies a monumental building erected by the Commonwealth Government under the Zoological Museum Agreement Act of 1924. Prior to the passing of this Act, the Commonwealth Government had expressed regret that the Australian Nation possessed neither a collection of specimens of the unique and fast disappearing fauna of Australia, nor a Museum in which such specimens could be preserved for future generations. Comparative anatomy is the basis of medical science, and while the importance of a study of Australian animals in the solution of various medical problems had for years been recognized by other countries and steps taken by them to procure specimens for their museums, national effort in this direction was neglected in Australia. The late Sir Colin MacKenzie, the first Director of the Institute of Anatomy, however, very kindly presented to the Commonwealth Government his entire private collection, and this magnificent gift was acquired and provision was made for its proper housing under special legislation by the Commonwealth Government. In 1931 the Institute became an integral part of the Commonwealth Department of Health.

2. *Additions to Original Collection.*—In addition to the original collection, which has been greatly augmented, the following gifts have been made to the Australian Nation, and are on view in the Institute:—

- (1) *Horne-Bowie Collection.*—Dealing with the life of Central Australian aborigines and throwing valuable light on the psychology of this Stone Age people.
- (2) *Burrell Collection.*—This deals with the life history of the platypus, and is unique in the world. The platypus is the most primitive mammal known to science, and is the link between the bird, the reptile and the mammal.
- (3) *Milne Collection.*—This is an anthropological and ethnological collection dealing with the aborigines of New South Wales, and contains many valuable and now unobtainable native weapons and implements.
- (4) *Murray Black Collection* of anatomical material representative of the aborigines of Southern Victoria and the River Murray.
- (5) *Nankivell Collection*, illustrating the anatomy of the aborigines of the Murray Valley.
- (6) *Harvard University Collection.*—This includes a collection of specimens from the Harvard University, U.S.A., representing a carefully worked out epitome of archaeology of the United States of America, and, together with two rare skeletons of primitive North American Indians, was a goodwill gift from the University to the Institute of Anatomy.
- (7) *The Sir Hubert Murray Collection.*—The ethnological and osteological collection of the late Sir Hubert Murray, formerly Lieutenant-Governor of Papua. This deals especially with the anthropology of Papua.
- (8) *The Rabaul Ethnological Collection.*—This concerns chiefly the ethnology of the Mandated Territory of New Guinea.
- (9) *The Basedow Collection.*—This collection has been recently purchased by the Commonwealth Government. It deals especially with the anthropology of Central and Northern Australia and was assembled, after many years of research, by the late Dr. Herbert Basedow of Adelaide, who was formerly Protector of Aborigines.
- (10) *The Crowther Collection* of stone artifacts of the extinct Tasmanian race. This collection was a gift of Dr. W. E. L. H. Crowther of Tasmania.
- (11) *Keith Goddard Australian Ethnological Collection.*—This collection has been donated by Mr. R. H. Goddard of Sydney and represents an important ethnological collection dealing with the aborigines of the Northern Territory. It includes also some specimens from the Pacific Islands.

- (12) Many hundreds of specimens and books received from numerous interested scientists, the most outstanding being those from Mr. E. Hill, of Nagambie, Victoria; Mrs. Harry Burrell, New South Wales; and medical books for the Library from the estates of the late Drs. Molloy, David Grant and Robert Stirling.

3. **Endowments for Orations and Lectures.**—In addition to the aforementioned donations of material, there have been several endowments for Orations and Lectures as follows:—

- (1) *The Anne MacKenzie Fund.*—Founded with a gift of £1,000 by the late Sir Colin MacKenzie in memory of his mother. The interest from the fund to be used to arrange for an oration or symposium to be delivered or held from time to time as circumstances warrant. The purpose of the lecture or symposium is to emphasize the importance of the prevention of disease.
- (2) *The Kendall Lecture in Veterinary Science.*—Endowed by the sons of the late Dr. W. T. Kendall who was the founder of the first Veterinary School in the Southern Hemisphere.
- (3) *The Charles Mackay Fund.*—Endowed by Miss C. Mackenzie with a gift of £607 as a memorial to her grandfather, an educationalist, who arrived in Melbourne in 1852 and died at Kilmore, Victoria. The purpose of the fund is to arrange a lecture or symposium known as the Charles Mackay Lecture or Symposium to be held from time to time as circumstances warrant. The lecture or symposium is to deal with the history of medical science.

4. **The Scope of the Institute.**—The building occupies a site which adjoins that reserved for the Australian National University.

The Institute consists of two separate and distinct entities. Portion of the original collection of anatomical specimens assembled by the late Sir Colin MacKenzie is arranged in two large museums which are open to the general public. The material in these museums has been arranged so as to present simple lessons in human hygiene as well as to display the anatomical features and especially the peculiarities of Australian fauna.

The remainder of the building houses research units which are studying problems in the biological and medical sciences. The large collections of bony anatomical material donated by Murray Black have provided most interesting and valuable data on aboriginal diseases.

In 1938, following upon the retirement due to ill-health of Sir Colin MacKenzie, the activities of the Institute were extended to interpret more fully the ideas of the founder. In the later years of his life Sir Colin had been keenly interested in the relationship of nutrition to the development of the child. In recent years the work of the staff has developed in laboratory and field research in problems of nutrition, and this work is being continued and developed particularly in association with the Institute of Child Health of the Commonwealth Department of Health, situated at the Sydney University.

§ 7. The Commonwealth Observatory.

1. **Foundation of Observatory.**—The Observatory was founded primarily to prosecute astrophysical research, including the study of the relations between solar and terrestrial phenomena. A short history of the foundation of the Observatory appears in *Official Year Book No. 19*, p. 979.

2. **Site of Observatory.**—The Observatory is situated on Mount Stromlo which forms part of a ridge of hills about seven miles west of Canberra. The highest point in the ridge is 2,560 feet above sea level, that is, about 700 feet above the general level of the surrounding country.

3. **Equipment.**—Some of the major items of astrophysical equipment have been obtained through the generosity of private donors. Thus a 30-inch reflector was donated by the late J. H. Reynolds, Esq.; a 9-inch refractor was presented by the late Mr. James Oddie; and the trustees of the late Lord Farnham made available a 6-inch refractor. Other major equipment comprises a solar tower telescope with an 18-inch coelostat and a 3-inch reversible transit instrument. The Observatory was the successful tenderer at a public sale for the purchase from the Victorian Government of the long disused 48-inch reflector of the now closed Melbourne Observatory. This instrument is being modernized so as to adapt it to the general astronomical programme of the observatory. A 74-inch reflector is being purchased.

4. **Functions of Observatory.**—In addition to covering the type of astrophysical research for which the Observatory was founded, the field of work has been extended to include experimental and theoretical investigations of the ionosphere, and the determination of time. The observatory is now responsible for the accuracy of the Australian Time Service. Considerable attention is being given to the development of this work, and a highly accurate quartz clock system has been installed. Investigations in the fields of double star astronomy, stellar spectroscopy, variable stars, terrestrial magnetism and cosmic rays are also being carried out.

§ 8. Standards Association of Australia.

The Standards Association of Australia is the national standardizing organization of Australia, and issues Australian standard specifications for materials and codes of practice.

The Association was established in July, 1929 by the amalgamation of the Australian Commonwealth Engineering Standards Association and the Australian Commonwealth Association of Simplified Practice. It is an independent body in close touch with modern industrial requirements and has the full recognition and support of the Commonwealth and State Governments and industry.

The sole executive authority of the Association is vested in the Council on which industry is fully represented, together with official representatives of the Commonwealth and State Governments and their technical departments, and of scientific, professional and commercial organizations. Voluntary assistance is rendered in the drafting of specifications and codes by more than 4,500 individuals who are experts in their particular fields and are organized into more than 500 committees. These committees are grouped under an internationally established classification, covering civil engineering and building construction, mechanical engineering, electrical engineering, automotive industry, transportation, naval architecture and marine engineering, shipbuilding, ferrous metallurgy, non-ferrous metallurgy, chemical industry, textile industry, mining, agriculture, wood industry, pulp and paper industry, glass and pottery, household and domestic economy, miscellaneous and general.

These committees are comprised of nominated representatives of manufacturing, distributing and purchasing organizations, and of scientific and other expert authorities in the particular field of the project being dealt with. The operations of these committees are co-ordinated and supervised by committees broadly representative of the whole industry, according to the foregoing classification, within which the respective projects are included.

The specifications of the Association provide a suitable standard of performance, quality and dimension and an equitable basis for tendering. They help to eliminate redundant qualities and sizes. They enable purchasers to obtain their requirements with greater assurance of satisfaction, with more rapid delivery and without the necessity of drafting individual specifications.

The underlying principles covering the preparation of the specifications and codes are that they shall be in accordance with the needs of industry; that the common interests of producer and consumer be maintained; that periodical revision should keep the work abreast with progress; and that standardization be arrived at by general consent without coercion.

Organizations, companies, firms and individuals interested in the work of the Association are eligible for subscription membership. Members are entitled to free copies of the publications of the Association and to the use of the library and its Special Information Service. Bibliographical research is undertaken for committees, members of the Association, and industry in general. Many hundreds of inquiries were answered during the last year.

The Association has international affiliations and the standards of all British and foreign countries are filed in the library and are accessible to members. It also administers the Australian National Committees of the International Electrotechnical Commission, the World Power Conference and the International Commission on Large Dams. The Association is also a member, representing Australia, of the International Organization for Standardization (ISO) and is an elected member of the ISO Council for the years 1947-1950 inclusive.

The Association is also the representative of the British Standards Institution, and all British standards may be purchased from head-quarters and branch offices in the various States.

The head-quarters of the Association are at Science House, Gloucester-street, Sydney, and branches of the Association are situated at Temple Court, 422 Collins-street, Melbourne; Sparkes Building, 183 Wickham-street, Valley, Brisbane; Alliance Building, Grenfell-street, Adelaide; Gledden Building, Hay-street, Perth; c/o Hobart Municipal Tramways, Lower Macquarie-street, Hobart; Department of the Interior, Canberra; and Howard Smith Chambers, Watt-street, Newcastle.

§ 9. Film Censorship.

1. *Legislation.*—The censorship of imported films derives its authority from Section 52 (g) of the Customs Act, which gives power to prohibit the importation of goods. Under this section, regulations have been issued prohibiting the importation of films except under certain conditions and with the consent of the Minister. The regulations provide, *inter alia*, that no film shall be registered which in the opinion of the Censor is (a) blasphemous, indecent or obscene; (b) likely to be injurious to morality, or to encourage or incite to crime; (c) likely to be offensive to the people of any friendly nation; (d) likely to be offensive to the people of the British Empire; or (e) depicts any matter the exhibition of which is undesirable in the public interest.

The regulations governing the exportation of Australian-made films are similar, with the addition that no film may be exported which in the opinion of the Censorship is likely to prove detrimental or prejudicial to the Commonwealth of Australia.

The Censorship consists of a Censorship Board of three persons and an Appeal Censor, the head-quarters being in Sydney. There is also a right of appeal to the Minister.

In addition to the censorship of moving pictures, the Censorship may refuse to admit into Australia any advertising matter proposed to be used in connexion with the exhibition of any film. In regard to films and advertising matter produced in Australia, legislation of a uniform nature is now operative in all States except South Australia. Under the State legislation the Commonwealth Film Censorship Organization acts as censor for the States concerned by virtue of agreements entered into between the Commonwealth and the respective State Governments.

2. *Import of Films.*—Imported standard size (35 millimetre) films dealt with by the Censorship for the year 1949 were as follows:—1,411 films of 3,397,028 feet passed without eliminations, 105 films of 710,520 feet passed after eliminations, and 2 films of 8,614 feet rejected in the first instance, making a total of 1,518 films of 4,122,771 feet (one copy). The countries of origin were as follows:—United States of America, 738 films of 2,605,190 feet; United Kingdom, 426 films of 1,036,986 feet; and 354 films of 480,595 feet from other countries.

There were also imported during 1949, 4,347 miniature films (16 millimetres) of 2,622,819 feet and 1,085 miniature films (9.5 and 8 millimetres) of 402,595 feet.

3. *Export of Films.*—The number of films exported for the year 1949 was 857 of 1,334,817 feet, of which 654 films of 1,125,370 feet were sent to places in the British Empire including Mandated Territories.

§ 10. Australian National Film Board.

1. Constitution and Functions.—The Australian National Film Board was inaugurated in April, 1945. Its duties as set out in the Cabinet Agendum authorizing its formation are “to expand, promote, assist and co-ordinate the production and distribution and the importation of films for purposes of school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion and immigration.”

The Board's constitution and functions were based on the recommendations of a Commonwealth Government inter-departmental committee which considered the suggestions of a conference of interested individuals and Commonwealth and State officials, including the Directors of Education, called in November, 1944 by the Ministers for Information and Post-war Reconstruction.

The Board consists of seven members appointed by the Commonwealth Government, one on the nomination of the Education Departments of the States. It was originally attached, for administrative purposes, to the Department of Information, through which Department and the Commonwealth National Library it carried out its functions. With the abolition of the Department of Information in March, 1950, administrative control of the Board was transferred to the News and Information Bureau of the Department of the Interior.

The News and Information Bureau produces, or supervises the production by commercial enterprises of, all films authorized by the Board and arranges for their theatrical distribution generally and their non-theatrical distribution outside Australia.

The Commonwealth National Library arranges for the acquisition of films other than Board productions, and has control of their non-theatrical distribution within Australia. There is an Advisory Committee to the Board in each of the States which acts as the agent of the Library in the non-theatrical distribution of films.

2. Organization and Production.—The film-making section of the News and Information Bureau is a well-equipped organization. Its nucleus was the Cinema and Photographic Branch of the Department of Commerce and Agriculture, which had been making publicity films for the Commonwealth Government for nearly twenty years before the war, and the Official War Photographers' unit of the Department of Information, which had its films processed by the trade in Sydney. The Cinema and Photographic Branch carried out its film-making activities in Bright-street, Melbourne. Unfortunately, its premises, together with the greater part of its equipment, were destroyed by fire in March, 1946.

For the next two years the Film Division worked under extreme difficulties. Temporary premises to house the various sections of the Division could not be found. A small laboratory was improvised in Melbourne to process 16mm. films, but the major activities of the Division were carried out in various trade establishments in Sydney. In 1948, however, the Division entered into possession of a studio at Burwood, Sydney, which had been converted from a school hall lent for the purpose by the Education Department of New South Wales, at a cost of approximately £20,000. This studio has excellent editing, cutting and sound recording facilities, but processing of all 35mm. film has still to be carried out by the trade in Sydney.

The Film Division makes, on an average, about 35 films a year (most of them single reels, although films of up to five reels have also been produced) as well as a number of national appeal shorts. The single reel films include a monthly film magazine known as the Australian Diary. The programme authorized by the Board includes films required by other Commonwealth Departments for information or publicity purposes.

During the year 1948-49 the Board authorized the production of films worth nearly £75,000, of which films sponsored by other Commonwealth Departments accounted for nearly £20,000.

The News and Information Bureau has a number of film units operating continuously, but also places contracts with commercial organizations.

3. **Distribution.**—Board films are designed primarily for informational and educational purposes, but a good many of them have been accepted for theatrical release in Australia, New Zealand, and the United Kingdom. Some are being released theatrically in the United States of America and Malaya, while others are being televised in the United States and the United Kingdom. All of them are being shown non-theatrically in overseas countries where the Commonwealth Government is represented officially. Several Board films have attracted favorable attention from overseas film societies.

As in the field of production, the News and Information Bureau co-operates closely with the film trade in the field of distribution. It has its representative on the National Film Council which arranges for the theatrical distribution of Government publicity shorts on subjects of national importance.

4. **Non-Theatrical Distribution.**—The Commonwealth National Library has built up a very comprehensive collection of documentary, educational and instructional films and other visual aids from all countries, having acquired them either by purchase, gift or exchange. Together with its agents in the States it has made great progress in the non-theatrical distribution of films.

§ 11. Australian Broadcasting Commission.

1. **General.**—The Australian Broadcasting Commission was established in 1932 to take over control of national broadcasting in Australia from the Australian Broadcasting Company, which had been in existence since 1924. In establishing the Commission the expressed object of the government of the day was to raise the standards of broadcasting in Australia. Control of the Australian Broadcasting Commission was vested in five commissioners, and it derived its finances from a portion of the licence fees paid by persons owning radio sets. This method of control and finance remained practically unchanged until December, 1948, when an Act was passed increasing the number of the commissioners to seven, one of whom was to be an officer of the Treasury and one an officer of the Postmaster-General's Department; the Act also changed the method of finance so that the Australian Broadcasting Commission now receives its income from an annual government grant, which bears no direct relation to the total amount collected in licence fees. The technical services of the Australian Broadcasting Commission are, as laid down in the Act of 1932, still provided by the Postmaster-General's Department.

Broadcasting in Australia is a compromise between the system in operation in Great Britain and that in the United States, and the duty of the Australian Broadcasting Commission is to maintain the standards of radio without either dictating to its listeners or playing down to the lowest tastes. Space does not permit of a complete review of its activities since 1932, but in the following paragraphs are set out a few facts of interest concerning some of its departments.

2. **Music.**—The Australian Broadcasting Commission is to-day the biggest concert-giving organization in the Commonwealth, and the immense growth of interest in music in this country is illustrated by the fact that Australian listeners in increasing numbers now welcome the opportunity of hearing fine music on the air and in the concert hall and have magnificently supported the presentation of orchestral concerts and of recitals by the best musicians from their own country and from overseas. In 1936 small regular orchestras were formed by the Australian Broadcasting Commission in Sydney, Melbourne, Adelaide, Brisbane, Perth and Hobart, and from these foundations have grown our present orchestras. Those in Sydney and Melbourne measure up to first class orchestras overseas, whilst those in the other capital cities are showing rapid improvement and are now the equal of those in many places of comparable size in Europe or America. Until 1946 the financing of these orchestras was the sole responsibility of the Australian Broadcasting Commission, but since then arrangements have been made in all States for local government and municipal bodies to bear part of their cost; in South Australia the cost is partly met by donations from the public. This close co-operation between a broadcasting organization, city authorities and State Governments to establish and maintain symphony orchestras is unique in the world.

In 1949, the Australian Broadcasting Commission organized 413 public orchestral concerts and 125 public recitals by solo artists throughout the Commonwealth.

The policy of the Australian Broadcasting Commission so far as individual artists are concerned has always been to develop local talent and at the same time to give its audiences the opportunity of hearing famous international musicians.

3. **Drama.**—There are many thousands of Australians to-day who not only have never seen a stage play but have never even had the opportunity of doing so. Radio drama has been able to bring to them the best plays of all ages and countries. The Australian Broadcasting Commission has two regular weekly drama programmes—"Saturday Night Drama" which presents the more popular material, and "Radio Repertory" in which classical and outstanding contemporary plays are broadcast. In addition, "National Theatre of the Air", which is a monthly feature, presents rather longer plays of the type of "Radio Repertory".

During the year 1948-49 nearly 50 per cent. of the plays presented were written by Australian authors. Many of the other plays broadcast were adapted for radio by Australian playwrights. The Drama Department encourages the submission of original work by local dramatists, and is always anxious to receive material for consideration.

4. **Youth Education.**—The Australian Broadcasting Commission provides a regular series of broadcasts to schools as an addition to normal class-room education. The total number of listening schools at the end of 1949 was 6,156 or nearly 60 per cent. of all schools, State and private, throughout the Commonwealth. Many of the school broadcasts are presented in dramatized form, as this method makes the material more vivid and interesting to the young listener. For the very young children, the Commission broadcasts every week day the "Kindergarten of the Air", which originated in Western Australia during 1942, at a time when kindergartens were closed by the threat of Japanese invasion. These broadcasts were the first of their kind anywhere in the world and are now not only presented in every State of the Commonwealth, but have recently been introduced in England, Canada and some European countries.

5. **Talks.**—The aim of the Talks Department is to provide programmes which will keep the listener well informed on current affairs and on general and historical topics. Many of the talks in the first category are now presented in a magazine type of session consisting of a number of short items linked by a narrator. This form of programme has proved popular with listeners but has by no means replaced the straight talk which usually runs from ten minutes to a quarter of an hour.

Two sessions which are designed to encourage discussion are the "Nation's Forum of the Air", and the talks designed for listening groups. In the former, a topic of a controversial nature is discussed by four speakers before a studio audience. After their initial speeches, the speakers are questioned by members of the audience or by local listeners who send their questions by telephone. In the talks to listening groups, supplementary material relating to the broadcasts is provided for groups of listeners, organized by the Australian Broadcasting Commission, who meet in their homes or elsewhere to discuss points arising from the broadcast.

6. **Rural Broadcasts.**—The Rural Broadcasts Department was commenced in 1945 to serve the needs of country listeners. It has proved to be of great value to men and women on the land throughout Australia, by giving them the latest market reports and information on general conditions, and by keeping them informed on rural development overseas. Programmes are exchanged with radio organizations in England, Canada, the United States and elsewhere, and several visits to Australia by well-known farm radio personalities have also been arranged. The department has encouraged the work of Junior Farmer's Clubs in Australia, and has sponsored competitions for members in connexion with the Royal Agricultural Shows in Sydney and Melbourne. These competitions are now being extended in 1950 to cover Great Britain and New Zealand in order to encourage international co-operation in this important work.

7. **News.**—On 1st June, 1947, the Australian Broadcasting Commission's independent News Service came into full operation. Since that date the Commission has collected the news for its bulletins independently of the press and it now has, in addition to a large staff throughout Australia, a London news room for the selection and transmission of overseas news scoured from the great news agencies. Nine national news bulletins are broadcast daily, and are followed by State bulletins of news of State interest. In addition, two regional bulletins are broadcast by local stations in country areas. The Commission also rebroadcasts, by arrangement with the British Broadcasting Corporation, two overseas news bulletins each day.

8. **Other Activities.**—The broadcasting of the proceedings of Federal Parliament commenced as a regular service in July, 1946, and Australian listeners are now able to hear full debates from the House of Representatives, and occasionally the Senate. At present these broadcasts are confined to one of the two transmitters in each capital city, but it is hoped that eventually country listeners will also be able to hear these broadcasts through the medium of shortwave transmissions.

The Children's Session is presented on each week day for children between the ages of 7 and 17. An important feature of this session is the Argonauts Club which children may join, and which encourages its members to contribute to the programmes and to do creative work such as painting, needlework, writing, poetry, etc. Part of the children's session is regularly devoted to an exchange of opinion on topical questions by members of the Argonauts Club.

The Australian Broadcasting Commission's variety and sporting programmes provide the lighter side of listening to the public. In its variety sessions the Australian Broadcasting Commission does everything possible to assist local artists in order to increase the amount of first class talent in this country. The Commission's dance bands in Sydney and Melbourne provide the accompaniment for the more important variety shows broadcast in these states, and are regarded as being two of the most outstanding bands in Australia.

The Australian Broadcasting Commission's coverage of sport at home and abroad is comprehensive. On Saturday afternoons the sporting panel provides listeners with the progress results and scores, and also descriptions from half a dozen or more fields of sport. Events of international interest such as Test Matches, the Davis Cup etc., are covered by simultaneous descriptions from Australian Broadcasting Commission commentators. In covering events overseas, the Australian Broadcasting Commission is indebted to the British Broadcasting Corporation for its collaboration in Great Britain, and the New Zealand Broadcasting Service for events in New Zealand.

In December, 1949 the Australian Broadcasting Commission's programmes were transmitted by 39 medium wave and 8 short wave stations. The 39 stations in operation at 30th June, 1948 are shown in Chapter V.—“Transport and Communication”, § 6 “Radio Telegraphy and Telephony”, page 226. The nine new stations which have come into operation since that date are as follows:—Medium wave stations—2NB (Broken Hill), 2NU (Manilla), 2TR (Taree), 5AL (Alice Springs), 2LG (Lithgow) and 4QY (Kamma); Short wave stations—VLI (Sydney), VLM (Brisbane) and VLX (Perth). One short wave station—VLG (Lyndhurst) was closed down. The short wave stations are used for giving service to listeners in the sparsely populated parts of Australia, and in New Guinea and adjacent islands. Twenty-seven of the medium wave stations are situated outside the capital cities, and further regional stations will be constructed in the near future. When the additions have been made, the regional net-work combined with the short wave stations will transmit the Commission's programmes with clear reception to every part of Australia.

§ 12. The National Safety Council of Australia.

The National Safety Council of Australia was founded in Melbourne in 1927 for the purposes of developing, mainly by means of education, safety on the road, at work and in the home, and its activities have developed in other directions wherever the need for reducing the toll of accidents has been shown. To this end it conducts continuous propaganda through the press and in other ways. It also forms Junior Safety Councils in the schools for developing a safety conscience among children. The children themselves are officers of these Councils and patrol the roads in the neighbourhood of the

schools and conduct the scholars across in safety. Posters are available to schools at cost in connexion with Health and Safety lessons in the schools. Small films specially taken are available for children's and home safety instruction.

A "Safe Driving" campaign for individual motor drivers is conducted as well as a "Freedom from Accidents" competition among employee drivers, those completing a year free from any accident for which they are responsible being given a certificate to that effect. An industrial service of four posters per month, together with slips for pay envelopes, constitutes a regular service for the dissemination of safety advice, and was supplied to over 100,000 workers in factories last year. Committees deal with specific problems regarding traffic, films, safety in industry, air safety and home dangers. The Air Safety Committee has issued a 32-page booklet "Air Sense" for distribution with pilots' private licences through the Civil Aviation Department, and has a plan for emergency night landings for aircraft in difficulties.

The Council is supported by a Government Grant, public subscription and sales of service, and is a non-profit organization. Its work is carried on by a small paid staff controlled by committees and governed by an executive. The following committees, whose work is of an entirely honorary nature, are in operation, namely, Executive, Traffic, Industrial Safety, Home, Air Safety and Propaganda.

§ 13. Commonwealth Disposals Commission.

Particulars of the constitution and functions of the Commonwealth Disposals Commission, its policy and procedure and an outline of its activities were given in Official Year Book No. 37 (*see* pp. 1194-6). A summary of the realizations of the Commission during the five years of its existence will be found in Chapter XXVI.—"Defence", § 9. "The Department of Supply and Development", page 1206.

§ 14. Division of Industrial Development.

A survey of the origin, development, functions and operations of the Division of Industrial Development prior to the abolition of the Department of Post-war Reconstruction in January, 1950 and the incorporation of the Division first in the Prime Minister's Department and later in the newly-created Department of National Development, will be found in Official Year Book No. 37, pp. 1196-7.

§ 15. Rent Control.

Prior to the outbreak of the 1939-45 War, rent control existed in Victoria and Queensland only. When hostilities commenced, the need became immediately apparent for more rigid control of the relationship between landlord and tenant in order to avoid rent inflation.

Accordingly, on 29th September, 1939, the Commonwealth, under its emergency powers, issued the National Security (Fair Rent) Regulations, providing for the establishment, in the various States, of Fair Rents Boards, and for the protection of tenants against eviction. An important feature of rent control in the Commonwealth up to this stage was that the fair rents regulations could not be enforced in any State by the Commonwealth Government, and their introduction was left to the discretion of the Governor-in-Council of the State concerned.

An increasing degree of control resulted from the National Security (Landlord and Tenant) Regulations, which were brought into operation on 28th November, 1941. Their general effect was to give greater security to tenants and to extend that security to tenants in States where in the opinion of the Government local legislation was inadequate.

New regulations gazetted on 15th June, 1945 provided for the appointment of a Commonwealth Rent Controller with power to fix the rent of rooms and other shared accommodation, the determination of rents of all other premises being still left with the Fair Rents Board. The Commonwealth Rent Controller, when appointed in July, 1945, immediately appointed deputies in the various States and Territories of the Commonwealth.

The power of the Controller was extended in December, 1946, when the jurisdiction of the Fair Rents Boards was transferred to the Controller. However, a right of appeal to a Fair Rents Board was provided by amendment of the regulations.

Under the Defence (Transitional Provisions) Acts the operation of the regulations was continued for a further period. However, since they were dependent for their validity upon the defence power contained in the Constitution, and the danger of a successful challenge in the High Court became increasingly great as time passed, a referendum was held on 29th May, 1948 to obtain approval for the Commonwealth to legislate on rents and prices (including charges). On defeat at the referendum, the Commonwealth Government decided to return various controls, including that over rents and evictions, to the States. The transfer was effected on 16th August, 1948, so far as New South Wales, Victoria, South Australia, Western Australia and Tasmania were concerned, and on 1st September, 1948 in the case of Queensland.

For further details of the provisions and operation of the various regulations issued, see Official Year Book No. 37, pp. 1197-1200.

§ 16. Housing Division.

In July, 1945 the Commonwealth Government created the portfolio of Works and Housing, thus amalgamating under one Minister a number of housing functions previously shared by several Commonwealth Departments. Within the new department the Housing Division was charged with the exercise of most of these functions. In March, 1950 the Housing Division was incorporated in the newly established Department of National Development, with particular functions similar to those previously exercised and the overall responsibility for stimulating housing and building construction within the framework of the approved programme of developmental work.

One of the major responsibilities of the Division is the administration of the Commonwealth and State Housing Agreement, under which the Commonwealth and State Governments are co-operating in a plan to provide good standard homes for families in the moderate income groups. Under this agreement the Commonwealth Government has agreed to advance to a State the money spent on housing projects by the State between 3rd December, 1943 and the date of the agreement, and the amount required for the State's housing projects during the next ten years. Each advance and interest thereon is to be repaid in equal annual instalments within a maximum period of 53 years from the date the advance is made, the interest to be at a rate not exceeding that payable in respect of the latest Commonwealth loan at the date of the advance. A feature of the rental provisions of the agreement is a system of rental rebates, whose basic principle is that a family with income at the basic wage level need not pay more than one-fifth of its income in rent, regardless of the economic rent of the dwelling. As the family income rises above or falls below the basic wage, so does the rebate diminish or increase. The Commonwealth bears three-fifths, and the State concerned two-fifths, of all losses occasioned by the rental rebate system. The agreement also provides for the sale of dwellings to tenants.

From the inception of the Commonwealth and State Housing Agreement in April, 1944 to 31st January, 1950, the five States operating under the agreement (South Australia, although a signatory, has not yet operated under the agreement) had completed 27,340 dwellings. A further 9,828 dwellings were under construction at that date. In the period mentioned, the Commonwealth advanced £56,572,000 to the States to finance the acquisition and development of land and the construction of dwellings.

The Housing Division, in administering the agreement, examines technical and financial aspects of housing by the State Housing Authorities. Close attention is given to uniform treatment, as between the States, in applying the different provisions of the agreement, and to ensure that the Commonwealth's interests are safeguarded and the terms of the agreement observed.

As part of its policy of assisting the Australian housing programme, the Division is engaged in many tasks, including the development, under the aegis of the Standards Association of Australia, of housing specifications and codes for low income group housing, the review of local supplies of materials, components, fittings, equipment, tools and labour; examination, with other bodies, of the application of new types of materials

and methods of construction to low-income housing and proposals for the importation of complete dwellings, components, building materials and labour. Special attention has been given to housing for basic industries especially coal and steel.

To keep Australia abreast of housing developments, the Division undertakes technical and economic research on various aspects of housing, and maintains a close watch on the latest thought and practice in developments overseas. Methods and policies that might be useful to State Housing Authorities and other interested bodies are published in *Australian Housing*, a bulletin issued by the Division at regular intervals, and a regular flow of informative material is maintained to authorities in all States.

The Division has been responsible for the development of the Australian Housing Cost Index as part of its continuous task of examination and analysis of house building costs. The index is published at quarterly intervals, and shows the trend in housing costs in the six capital cities of the Commonwealth.

Finally, the Division is concerned with other tasks related to its general function of expediting the housing programme. Recently, these have included such questions as the special problems arising from slum clearance, the housing needs of different sections of the community—e.g., old persons and service personnel, review of prefabricated housing proposals, continuing research into possible economies in the use of building materials, especially timber, and into the desirability of modernizing local government building regulations, and decentralization.

§ 17. War Service Homes.

The provision of War Service Homes is a function of the Department of Works and Housing and the administration of the War Service Homes Act is under the immediate control of the Director of War Service Homes.

The War Service Homes Act 1918-1949 is a measure for the provision of homes for Australian soldiers who served during the 1914-18 War or during any war in which His Majesty became engaged on or after 3rd September, 1939; also to the female dependants of Australian soldiers and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person, as the case may be, as joint tenants.

The maximum amount of loan or advance which may be granted under the Act is £2,000, and periods of repayment may be approved up to 45 years; in the case of a widow or widowed mother of an Australian soldier this may be extended to a maximum of 50 years.

The War Service Homes Division does not provide homes for occupation on a purely tenancy basis.

Since the inception of operations under the War Service Homes Act (figures in parentheses indicate cases where eligibility has been established and assistance granted as a result of service during the 1939-45 War) 65,015 (19,139) applications have been approved; 25,834 (4,201) homes have either been built, or assistance to build them has been given; 18,841 (5,617) homes have been purchased; and 5,372 (2,202) mortgages have been discharged. The total number of homes provided under the War Service Homes Act to 30th June, 1949 was 50,047, including 12,020 to persons who served during the 1939-45 War.

In addition, the Division had approved of 8,312 transfers and resales of which 574 were in respect of persons whose eligibility had been established as a result of service during 1939-45.

During 1948-49 8,066 (7,766) applications were approved; 2,525 (2,440) homes were either built or assistance to build them was given; 2,620 (2,534) homes were purchased; and 939 (909) mortgages were discharged. The total number of homes provided during the financial year 1948-49 was 6,084 (5,883). Transfers and resales approved numbered 201 (109).

At 30th June, 1949, 4,016 homes, including 1,691 group projects, were in course of construction; 1,141 contracts, of which 312 were for group homes, had been let but work not started, and 1,192 tenders, including 394 for group homes, had been called but not finally dealt with. The majority of these homes are being provided for persons who served during the 1939–45 War.

The total capital expenditure from inception to 30th June, 1949 was £45,648,752, including £8,566,314 for 1918–49. The net capital expenditure for 1948–49, after allowing for unexpended advances as at 30th June, 1949, was £8,551,902. Receipts from inception to 30th June, 1949 amounted to £41,049,636, including £2,023,711 during 1948–49. Of the total receipts, £18,744,206 has been paid to the National Debt Sinking Fund, including £1,356,848 for 1948–49.

At 30th June, 1949 the total amount of insurances in force, including cover notes, amounted to £35,241,474. The premium income for 1948–49 amounted to £39,976, and expenditure from the War Service Homes Insurance Trust Account to £16,007.

At 30th June, 1949, arrears of instalments outstanding amounted to £272,189 or 0.76 per cent. of the total instalments due. These arrears include the sum of £165,237 which has been capitalized in accordance with the provisions of the War Service Homes Act as amended in December, 1932, and arose out of the economic depression. The capitalized arrears form part of the balance of loans and/or advances outstanding at 30th June, 1949.

§ 18. New Building.

1. *General.*—The statistics in this section relate to the operations of private contractors, Government authorities and owner-builders, with the exception of those relating to employment, which exclude the numbers of persons working on owner-built houses. In general, they relate to *new* building only, and data on alterations, additions, renovations and repairs to buildings are excluded, because of the difficulty in obtaining complete lists of persons who engage in these operations. Figures for houses exclude converted military huts, flats and shop dwellings. Some houses built on farms are excluded but these do not affect the figures materially.

The following definitions of terms used in this section are necessary to understand the data presented :—

Owner-Builder. A person who is actually building his own house or is having his house built under his own direction without the services of a contractor.

Commenced. A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, it is probable that interpretations placed upon it by informants are not entirely uniform.

Completed. A building is regarded as having been completed when the builder has fulfilled the terms of the contract. As with commencements, the interpretations placed upon this definition may vary.

Under Construction. A building remaining uncompleted at the end of a period is regarded as being under construction, regardless of whether construction was actively proceeding on that particular date.

Employment. The figures of employment relate to persons actually working on new buildings on a specified day. They include working principals, employees, men working as, or for, sub-contractors and men temporarily laid off on account of weather. In addition, they include some employees engaged on alterations, additions, renovations or repairs to buildings *when these jobs are undertaken by a contractor who builds new buildings*. The figures exclude persons working on owner-built houses.

Values. All values shown exclude the value of land and represent the estimated value of buildings on completion.

2. *Value of New Buildings.*—(i) *Completed, 1948-49.* The following table shows the value of all new buildings completed in each State during 1948-49, according to the kind of building. It should be remembered that all values shown exclude the value of land and represent the estimated value of buildings on completion.

NEW BUILDINGS COMPLETED, 1948-49 : VALUE.

4. **Numbers of New Flats.**—The figures in the two foregoing tables do not include particulars of new flats. The summary below shows the numbers of new flats commenced, completed and under construction in Australia for the years 1945-46 to 1948-49, together with State details for 1948-49. It should be noted : (i) that the figures are additional to the numbers of houses shown in other tables, (ii) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, and (iii) that new flats only are included, i.e., the conversions of old buildings into flats are omitted.

NEW FLATS : NUMBER.

(a) Actually working on jobs.

§ 19. Clothing and Food Rationing.

1. **General.**—The rationing of clothing and certain foodstuffs was established early in the 1939–45 War, but has since been discontinued. For greater detail as to the scale of rationing *see* Official Year Book No. 36, pp. 1084–1090.

2. **Clothing.**—The principal reason for the continuance of clothing rationing during post-war years was shortage in supply of woven piece goods, in particular, cottons from overseas. For particulars of the position of Australia in this respect until the ending of clothing rationing on 21st June, 1948, *see* Official Year Book No. 37, p. 1206.

3. **Food.**—(i) *Review of Food Rationing.* Food rationing in Australia was introduced as a war-time necessity in 1942, in order to ensure that the foodstuffs in demand were so allotted as to meet the requirements of the Armed Services based upon Australia, and to provide for an equitable distribution among civilians.

The commodities subject to coupon rationing were Tea, Sugar, Butter and Meat. Sugar rationing was introduced on 31st August, 1942, and ended on 2nd July, 1947. The ration rate throughout the period was 1 lb. per head per week, plus an allowance for jam-making of 10 to 12 lb. per head per annum. The rationing of meat commenced on 17th January, 1944 and ceased on 21st June, 1948. The adult rate varied from 2½ lb. per head per week in 1944 to about 1.8 lb. per head per week in 1945, remaining at this level until rationing ended in 1948. The continuance of tea rationing into 1950 was due to the shortage of world supplies. The original ration rate was 1.6 oz. per head per week, but on 19th October, 1942 it was increased to 2 oz. and remained at that level until 2nd July, 1950, when rationing ceased. Although adequate supplies of butter were available to meet local requirements, rationing at the rate of 6 oz. per head per week was maintained until 16th June, 1950. The purpose of butter-rationing was to restrict local consumption so as to provide a maximum quantity for export to meet short supplies overseas, particularly in the United Kingdom.

(ii) *Foodstuffs not subjected to Coupon Rationing.* In addition to the commodities mentioned above, other items of foodstuffs were subjected to some measure of control under war-time conditions. These were not subject to coupon rationing, but their availability for civilian consumption was determined after other priorities had been met. The items included Bacon and Ham, Eggs, Milk, Cream and Rice. By 1949 there was little lack of supplies in these items, except for cream and rice. Restrictions on the sale of cream were lifted during 1950 while the distribution of rice reverted to the trade towards the end of 1950 and supplies have been made available for general consumption. Formerly the only supplies of both items entering civilian consumption in Australia were restricted to hospitals and approved medical cases, but resident Asiatics also received a weekly allowance of rice.

(iii) *Consumption of Rationed Foodstuffs.* In previous issues a table was published, showing the annual civilian consumption in Australia of foodstuffs which were rationed during the 1939–45 War, illustrating the reduced civilian consumption of these commodities brought about by rationing. The tables in the following section—Consumption of Foodstuffs and Beverages—give some idea of the position from 1945 onward.

§ 20. Consumption of Foodstuffs and Beverages.

1. **Quantities Consumed.**—Previous issues of the Year Book up to No. 36 included a statistical survey of the movement in the consumption in Australia, in total and per head of population, of a selected number of commodities over a period of years up to 1940-41 (see Official Year Book No. 36, pp. 1098-1100). In issue No. 37 these long-term comparisons were replaced by more detailed information covering consumption of the principal foodstuffs and beverages in annual periods since 1944, in comparison with average annual consumption during the three years ended 1938-39. In this issue the annual periods extend from 1945 to 1948-49.

The estimates of total consumption and consumption per head of population in Australia in the two tables following have been compiled by deducting net exports from production and allowing for recorded movements in stocks of the respective commodities. While the estimates may generally be accepted as reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of poultry, game and fish (fresh and shell) and the quantities of visible oils and other fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc., which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. Other difficulties occur in the compilation of statistics of consumption for which no allowance has been made. These include (i) the absence of particulars of stock movements in a limited number of cases, (ii) the disposal of surplus Army stores after the close of the war and (iii) the purchase of foodstuffs on the civilian market and the despatch of these quantities overseas as gifts in bulk and by parcel post. These deficiencies, however, do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head shown in the second table following have been checked, wherever possible, with data from other sources which confirm the reliability of the methods used. The data were obtained principally from the Food Consumption Survey conducted in 1944 by the Nutrition Committee of the National Health and Medical Research Council.

There has been a general upward movement in the consumption per head of population of most foodstuffs and beverages in Australia from the levels of consumption during the three years immediately preceding the 1939-45 War. The principal commodities which show a decline in consumption are meat, butter, tea and rice. Butter and tea were still subject to consumer rationing in 1948-49.

More detailed information on the consumption of foodstuffs and beverages is contained in the publication, *Report on Food Production and the Consumption of Foodstuffs and Nutrients in Australia*, issued by this Bureau.

2. Level of Nutrient Intake.—The table below shows details of the estimated supplies of nutrients available for consumption in Australia during annual periods since 1946-47 in comparison with the annual average for the three years 1936-37 to 1938-39. The table

has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of quantity consumption per head of population shown in the preceding table.

§ 21. Marketing of Australian Primary Products.

Prior to the outbreak of war the necessity for Commonwealth marketing legislation arose principally from difficulties encountered by the various Australian primary industries in oversea markets. Legislation of this kind usually resulted from consultations held between the Commonwealth Government and producers with a view to discovering a means whereby these difficulties could best be overcome. The essential element of this legislation was the establishment of producer-controlled industry boards, whose function was to control the oversea marketing of the product concerned. Agreement was reached by the Governments of the United Kingdom and the Commonwealth which enabled exports from Australia to proceed normally even before any contracts for the sale of commodities had been concluded.

On the outbreak of hostilities, the existence of statutory boards for the meat, dairy produce and fruit industries facilitated war-time organization. However, war-time conditions so dislocated the normal facilities for marketing many of our other primary products that, in the interests of producers and the community generally, it became necessary for the Commonwealth Government to organize the marketing of some commodities previously unaffected by marketing legislation. The experience already gained in marketing control enabled the Commonwealth Government to proceed quickly with the formation of committees and/or boards in the industries concerned, namely, wool, wheat, barley, potatoes, tobacco, apples and pears, hides and leather, sheep skins, rabbit skins, tallow and eggs. In the case of other commodities it was found essential to expand the controls already in existence and in some instances this involved the establishment of an authority in the industry additional to that already constituted under pre-war marketing statutes. For the greater part, these war-time authorities were set up by virtue of regulations under the National Security Act. Several of the war-time organizations set up under the National Security Act have since been superseded by permanent boards established by the Commonwealth Government to control oversea marketing.

Full details of the operations of both permanent and war-time boards and other authorities appointed to assist or control the marketing of Australian primary products are included in Chapter XIX.—Pastoral Production, Chapter XX.—Agricultural Production and Chapter XXI.—Farmyard, Dairy and Bee Products.

§ 22. Valuation of Australian Production.

1. **Net Value of Production.**—(i) *Australia.* The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published below have been compiled by the State Statisticians from the best data available, and relate to 1947-48. Comparable details for 1946-47 may be found in *Production Bulletin* No. 41, Part II., pp. 82-91. The adoption of substantially uniform methods of valuing production and of estimating elements of costs of production and marketing render the results comparable as between States.

Attention is directed to the fact that the value shown in the table refers only to recorded production and excludes the building and construction industry, those industrial establishments not classified as factories, and agricultural and farmyard produce obtained from areas of less than one acre.

The following is a brief explanation of the terms used in the table :—

- (a) "Gross value" is the value placed on recorded production at the wholesale price realized in the principal markets. (In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.)
- (b) "Local value" is the gross production valued at the place of production and is ascertained by deducting marketing costs from the gross value. (Marketing costs include freight, cost of containers, commission and other charges incidental thereto.)
- (c) "Net value" represents the net return to the producer after deducting from the gross value costs of marketing and of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays and other costs. No deduction has been made for depreciation and maintenance costs. This matter is more fully dealt with in *Production Bulletin* No. 42, Part II., issued by this Bureau.

It should be noted that costs of maintenance of farm buildings and fences have not been deducted from the value of production of rural industries, as particulars are not available for all States. In addition, there is an overstatement in the net value of production for New South Wales by the inclusion of power costs in rural industries. These costs, which amounted to £1,892,000 in 1940-41, have not been ascertained in later years. The value shown for Mines and Quarries in Tasmania is understated owing to the omission of Quarries. This understatement, however, is more or less offset by the inclusion of production costs in Mining. Production costs are not available for all States in respect of Fisheries, and Local Values have been used for this industry with consequent overstatement.

In the chapter dealing with each industry (except trapping and mines and quarries) tables will be found showing the total and per capita value of production for that industry by States for a series of years ending 1947-48.

GROSS, LOCAL AND NET VALUE OF RECORDED PRODUCTION: AUSTRALIA, 1947-48.

(b) Local value.

2. **Productive Activity.**—The two tables, and comment thereon, last published in Official Year Book No. 36, relative to measurement of productivity are omitted from this issue pending revision in the light of changes in age composition of the population as revealed by the Census of 1947, and of changes in age and sex composition of persons engaged in production in recent years.

§ 23. Indexes of Production.

In the tables below, indexes of price and quantity production are given for the following industrial groups, namely :—Agriculture, Pastoral, Farmyard and Dairying, Gold and Other Minerals, and for all groups combined. The method used in calculating these indexes is the fixed base weighted aggregative method. Prices for any year are obtained by dividing value of production by quantity produced in that year, and the price indexes are computed by using as fixed quantity-multipliers, for the commodities involved, the average quantities produced over the period 1923-24 to 1927-28. For

the quantity indexes the fixed multipliers are weighted average prices over the same period, which are obtained by dividing the total value of any commodity for the period by the total quantity produced. Exactly the same method is used for the combined group indexes (i.e., for All Farming and Total) as for the indexes for individual groups.

§ 24. The United Nations.

1. **General.**—The Moscow Declaration of 1943 concerning a new international organization for the maintenance of international peace and security marked the end of the League of Nations. The dissolution of the League, and the transfer of certain of its functions to the new body, the United Nations, have now been completed. Information concerning the League of Nations was given in issue No. 35 and earlier issues of the Official Year Book.

The Charter of the United Nations was drawn up by the delegates of fifty nations at the United Nations Conference on International Organization at San Francisco from 25th April to 26th June, 1945. Australia's ratification was deposited on the 1st-November, 1945. There are now 59 member states: Afghanistan, Argentina, Australia, Belgium, Bolivia, Brazil, Burma, Byelorussia, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Iceland, India, Iran, Iraq, Israel, Lebanon, Liberia, Luxembourg, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panama, Paraguay, Peru, Philippine Commonwealth, Poland, Saudi Arabia, Siam, Sweden, Syria, Turkey, Ukraine, Union of South Africa, Union of Soviet Socialist Republics, United Kingdom, United States of America, Uruguay, Venezuela, Yemen, Yugoslavia.

The full record of the Conference is contained in the Report by the Australian Delegates on the United Nations Conference on International Organization held at San Francisco, United States of America, from 25th April to 26th June, 1945.

The Australian delegates to the Conference were the Rt. Hon. F. M. Forde, M.P., and the Rt. Hon. H. V. Evatt, K.C., M.P.

At San Francisco an Executive Committee and a Preparatory Commission were established, and when these bodies had completed their work of preparation for the first meeting of the United Nations, the General Assembly met in London on 10th January, 1946.

The principal organs of the United Nations are the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council, the International Court of Justice and the Secretariat.

2. **General Assembly.**—This is the forum of the United Nations. In it each member state is represented and has one vote. It meets in regular annual sessions and has provision for special sessions. It has power to discuss any matter within the scope of the Charter and to make recommendations upon it; an exception to this is provided by disputes which are before the Security Council. The Assembly elects the non-permanent members of the other major organs and considers annual reports from them. Upon the recommendation of the Security Council, it may expel a member which has persistently violated the principles of the Charter.

3. **The Security Council.**—This has the primary responsibility for the maintenance of international peace and security. It is composed of five permanent members namely China, France, the United Kingdom, the Union of Soviet Socialist Republics and the United States of America, and six non-permanent members with two-year periods of office, of whom three retire at the end of each year. The following are the non-permanent members of the Security Council at present: Cuba, Egypt, Norway (retiring at the end of 1950) and Ecuador, India, Yugoslavia (retiring at the end of 1951). On procedural matters, decisions are taken by an affirmative vote of any seven members. But on all other matters, decisions can only be made on the affirmative vote of seven members, including the concurring votes of all the permanent members. However, the powers which are parties to a dispute for peaceful settlement do not vote.

At the first election, three non-permanent seats were filled for one year only. Member states elected for this period were Egypt, Mexico and the Netherlands. Australia, Brazil and Poland were elected for two-year periods.

The Security Council is assisted by a Military Staff Committee consisting of the Chiefs of Staff of the permanent members of the Council. In the event of measures other than armed force failing to remove a threat to peace, plans for the application of armed force are made by the Security Council with the assistance of this committee. The forces required are to be drawn from the member states as a result of particular agreements between those states and the Security Council.

4. **The Economic and Social Council.**—This body consists of eighteen members, each elected for a period of three years. Its main functions are to make, or initiate, studies and reports, and to make recommendations to the General Assembly or to members of the United Nations, upon international, economic, social, cultural, educational, health and related matters. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

The present members of the Economic and Social Council are: United Kingdom, U.S.S.R., Brazil, Denmark, Australia, Poland (retiring at the end of 1950), Belgium, China, Chile, France, India, Peru (retiring at the end of 1951), Mexico, Iran, United States of America, Pakistan, Canada, Czechoslovakia (retiring at the end of 1952).

5. **The Trusteeship Council.**—The Charter declares the political, social, cultural and economic advancement of the non self-governing territories to be a sacred trust. A Trusteeship Council has been set up composed of those members of the United Nations who are administering trust territories and an equal number of members who are not administering trust territories (including any permanent members of the Security Council who are not administering trust territories). Territories which may be placed under trusteeship in accord with individual trusteeship agreements are those previously held under mandate, those detached from enemy states as a result of the second World War and those dependent territories placed under the system by the states responsible for their administration. Australia is automatically a member of the Trusteeship Council, as an administering Power. The present members of the Trusteeship Council are: Australia, Belgium, France, New Zealand, United Kingdom and the United States of America (administering States), and China, the Dominican Republic, Philippines, U.S.S.R., Argentina and Iraq (non-administering States). China and the U.S.S.R. are eligible for permanent membership of the Trusteeship Council by virtue of their permanent membership of the Security Council.

The Council has among its duties the consideration of annual reports submitted by the trustee state, the carrying out of periodic inspections by agreement with it, and the formulation of questionnaires on the welfare and advancement of the dependent peoples.

6. **The International Court of Justice.**—This consists of fifteen judges, no two of whom may be nationals of the same state. Its jurisdiction comprises all cases which the parties refer to it, and all matters especially provided for in the Charter or in treaties and conventions in force. Provision exists in the Statute of the Court whereby States parties to the Statute may accept the jurisdiction of the Court as compulsory, either conditionally, or unconditionally in certain international disputes.

The judges first elected are:—Nine year term: Professor Jules Basdevant (France), Dr. J. G. Guerrero (El Salvador), Sir Arnold McNair (United Kingdom), Dr. Alejandro Alvarez (Chile), and Dr. J. P. de Barros Azevedo (Brazil); Six year term: Dr. Charles de Visser (Belgium), Professor S. B. Krylov (Union of Soviet Socialist Republics), Lic. Isidro Fabela Alfaro (Mexico), the Hon. Green H. Hackworth (United States of America), and Dr. Juris. H. Klaestad (Norway); Three year term: Dr. Hsu Mo (China), H. E. Abdel Hamid Badawi Pasha (Egypt), Mr. J. E. Read, K.C. (Canada), Dr. Milovan Zoricic (Yugoslavia), and M. Bohdan Winiarski (Poland). At the Third Annual Session of the Assembly the five retiring judges were re-elected.

7. **The Secretariat.**—The Secretary-General is the head of the Secretariat of the organization. He is appointed by the General Assembly upon the recommendation of the Security Council, and he appoints his staff in accordance with the rules approved by the General Assembly. M. Trygve Lie (Norway) was appointed first Secretary-General.

8. **Specialized Agencies.**—In addition to these organs of the United Nations there are thirteen specialized agencies which co-operate closely with the United Nations in many fields on economic and social questions.

Those already in operation are : The International Labour Organization ; Food and Agricultural Organization ; United Nations Educational, Scientific and Cultural Organization ; International Civil Aviation Organization ; International Bank for Reconstruction and Development ; International Monetary Fund ; Universal Postal Union ; World Health Organization ; International Telecommunications Union ; International Refugee Organization.

To enable co-ordination of the work of the specialized agencies, arrangements have been made for them to submit reports on their activities and budgets to the United Nations where they are discussed by the Economic and Social Council and the General Assembly.

§ 25. Diplomatic and other Representatives Overseas and in Australia.

1. **General.**—The following statements show particulars of the various diplomatic and other representatives overseas and in Australia in September, 1950. Full details of British and foreign representation in Australia—diplomatic and consular—and of permanent Australian missions overseas may be obtained from publications issued by the Department of External Affairs, Canberra.

2. Australian Representation Overseas.—

AUSTRALIAN DIPLOMATIC AND OTHER REPRESENTATIVES OVERSEAS.

His Majesty's Ambassador Extraordinary and Plenipotentiary to—

China, Nanking—

Vacant.

France, Paris—

Sir Keith Officer, O.B.E., M.C.

Ireland, Dublin—

Vacant.

Counsellor, Dr. W. A. Wynes (Chargé d'Affaires *ad interim*).

Netherlands, The Hague—

A. T. Stirling, O.B.E. (Designate).

Union of Soviet Socialist Republics, Moscow—

Vacant.

First Secretary, F. J. Blakeney (Chargé d'Affaires *ad interim*).

United States of America, Washington, D.C.—

The Hon. N. J. O. Makin.

United States of Indonesia, Djakarta—

J. D. L. Hood.

His Majesty's Australian Envoy Extraordinary and Minister Plenipotentiary to—

Brazil, Rio de Janeiro—

Vacant.

First Secretary, R. P. Throssell (Chargé d'Affaires *ad interim*).

Egypt, Cairo—

C. Massey.

Israel, Tel Aviv—

O. C. W. Fuhrman, O.B.E.

Italy, Rome—

C. V. Kellway.

Philippines, Manila—

Rear-Admiral G. D. Moore, C.B.E.

High Commissioners for Australia in—

Canada, Ottawa—

The Rt. Hon. F. M. Forde.

Ceylon, Colombo—

Vacant.

Official Secretary, A. H. Borthwick.

India, New Delhi—

H. R. Gollan, D.S.O., M.C.

New Zealand, Wellington—

A. R. Cutler, V.C.

Pakistan, Karachi—

J. E. Oldham.

Union of South Africa, Pretoria—

Vacant.

Official Secretary, M. H. Marshall.

United Kingdom of Great Britain and Northern Ireland, London—

The Hon. E. J. Harrison (Resident Minister).

Australian Military Mission in—

Germany, Berlin—

Head, N. St. C. Deschamps (Acting).

Australian Mission—

Germany, Bonn—

Head, N. St. C. Deschamps.

Major-General J. J. Murray, D.S.O., M.C., V.D., Colombo.

China—

Brigadier H. Wrigley, C.B.E., M.C., Hong Kong.

Egypt and Middle East—

C. L. Steele, Cairo.

France—

H. Sullivan, Commercial Counsellor, Paris.

India—

S. D. Shubart, Bombay.

A. N. Wootten, Calcutta.

Japan—

H. C. Menzies, Commercial Counsellor, Tokyo.

Malaya—

J. Payne, Singapore.

New Zealand—

R. Hazzard, Wellington.

Pakistan—

H. W. Goodger, Karachi.

Union of South Africa—

G. R. B. Patterson, Johannesburg.

United Kingdom of Great Britain and Northern Ireland—

C. E. Critchley, M.B.E., London.

United States of America—

Trade Commissioners—

R. R. Ellen, New York.

S. F. Lynch, San Francisco.

Commercial Counsellor—

J. U. Garside, Washington, D.C.

3. Oversea Representation in Australia.—Consular representatives are not included in the following statement. Particulars of these are contained in a publication "Consular Representatives and Trade Commissioners in Australia", issued by the Department of External Affairs, Canberra. There are more than 150 such representatives in Australia, and 35 countries are represented.

DIPLOMATIC REPRESENTATIVES IN AUSTRALIA.

Belgium—Envoy Extraordinary and Minister Plenipotentiary—

His Excellency Monsieur Felix F. A. Jansen.

Brazil—Envoy Extraordinary and Minister Plenipotentiary—

His Excellency Senhor José Cochrane de Alencar, O.B.E.

Canada—High Commissioner—

His Excellency Major-General The Rt. Hon. L. R. La Flèche, D.S.O.

Ceylon—High Commissioner—

His Excellency Mr. J. Aubrey Martensz.

China—Ambassador Extraordinary and Plenipotentiary—

His Excellency Dr. Kan Nai-kuang.

Denmark—Envoy Extraordinary and Minister Plenipotentiary—Vacant.Chargé d'Affaires *ad interim*, Mr. F. H. Hergel.

DIPLOMATIC REPRESENTATIVES IN AUSTRALIA—continued.

- Finland*—Envoy Extraordinary and Minister Plenipotentiary—Vacant.
Chargé d’Affaires *ad interim*, Monsieur P. I. Simelius.
- France*—Ambassador Extraordinary and Plenipotentiary—
His Excellency Monsieur Gabriel Padovani.
- India*—High Commissioner—
His Excellency Maharaj Shri Duleepsinhji.
- Ireland*—Representative of Ireland in Australia—
His Excellency Dr. the Hon. T. J. Kiernan (personal rank of Minister).
- Israel*—Envoy Extraordinary and Minister Plenipotentiary—
His Excellency Mr. Joseph Isaac Linton.
- Italy*—Envoy Extraordinary and Minister Plenipotentiary—
His Excellency Don Giulio del Balzo.
- Malta*—Commissioner—
Captain Henry C. Curmi, O.B.E.
- Netherlands*—Envoy Extraordinary and Minister Plenipotentiary—Vacant.
Chargé d’Affaires *ad interim*, Mr. A. H. Hasselman.
- New Zealand*—High Commissioner—
His Excellency Mr. G. E. L. Alderton.
- Pakistan*—High Commissioner—
His Excellency Mr. Yusuf Abdoola Haroon.
- Philippines*—Envoy Extraordinary and Minister Plenipotentiary—
His Excellency Dr. Roberto Regala.
- Sweden*—Envoy Extraordinary and Minister Plenipotentiary—Vacant.
Chargé d’Affaires *ad interim*, Mr. B. H. Alander.
- Union of South Africa*—High Commissioner—
His Excellency Dr. P. R. Viljoen.
- Union of Soviet Socialist Republics*—Ambassador Extraordinary and Plenipotentiary—
His Excellency Mr. N. M. Lifanov.
- United Kingdom of Great Britain and Northern Ireland*—High Commissioner—
His Excellency the Rt. Hon. E. J. Williams.
- United States of America*—Ambassador Extraordinary and Plenipotentiary—
His Excellency Mr. Pete Jarman.
- United States of Indonesia*—Ambassador Extraordinary and Plenipotentiary—
His Excellency Dr. Oetoyo.

TRADE COMMISSIONERS OF OVERSEA GOVERNMENTS IN AUSTRALIA.

- Canada*—
Senior Canadian Government Trade Commissioner, Sydney—
C. M. Croft.
Canadian Government Trade Commissioner, Melbourne—
F. W. Frazer.
- India*—
Indian Government Trade Commissioner, Sydney—
A. Baksi.
- New Zealand*—
Senior New Zealand Government Trade Commissioner, Sydney—
W. Taylor.
New Zealand Government Trade Commissioner, Melbourne—
B. R. Rae, M.B.E.

TRADE COMMISSIONERS OF OVERSEA GOVERNMENTS IN AUSTRALIA
*continued.**Pakistan—*

Trade Commissioner, Sydney—

K. H. Rahman.

United Kingdom of Great Britain and Northern Ireland—

His Majesty's Senior Trade Commissioner, Canberra—

J. B. Greaves, C.M.G., O.B.E.

His Majesty's Trade Commissioners, Sydney—

J. R. Adams.

A. Hartland.

J. D. Leithead.

His Majesty's Trade Commissioners, Melbourne—

H. F. Gurney, O.B.E.

W. G. Lamarque.

E. J. E. Newbold.

His Majesty's Trade Commissioner, Brisbane—

P. Ingleson, C.M.G., M.B.E., M.C.

United States of Indonesia—

Trade Commissioner, Melbourne—

J. Van der Noordaa.

CHAPTER XXIX.

STATISTICAL ORGANIZATION AND SOURCES OF INFORMATION.

§ 1. General.

Development of Australian Statistics.—An outline of the history and development of statistics in Australia is published in Official Year Book No. 19 (*see* p. 988) and previous issues, particular reference being made to the Crown Colony Blue Books, Statistical Registers, Prominent State Statisticians, Statistical Conferences, the Foundation of the Federal Bureau, the Uniformity of Statistical Control and the organization for the collection, tabulation, etc., of statistical data as between the State and Commonwealth Statistical Bureaux, and State and Commonwealth Government Departments.

§ 2. Statistical Publications of Australia.

1. General.—The official statistical publications of Australia may be divided bibliographically into two main divisions, namely :—(1) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (2) State publications dealing with individual States only. Besides these, there are many other circulars, press notices, etc., issued regularly which, though not wholly statistical, necessarily contain a considerable amount of statistical information.

2. Commonwealth Publications.—Commonwealth publications may be grouped under two heads, namely :—(i) Publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers.

(i) *Publications issued by the Commonwealth Statistician.* The following is a list of the principal statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration to December, 1950 :—

Australian Life Tables, 1901-1910. Australian Joint Life Tables, 1901-1910.

Australian Life Tables, 1920-1922.

Australian Life Tables, 1932-1934. Australian Joint Life Tables, 1932-1934.

Australian Life Tables, 1946-1948.

Australian Primary Industries.—Report prepared for the Empire Producers Conference, Sydney, March, 1938.

Census (1911) Results.—Bulletins. Vols. I. (Statistician's Report), II., and III., with Appendix "Mathematical Theory of Population."

Census (1921) Results.—Bulletins, Nos. 1 to 26. Parts I. to XVI., forming Vol. I., and Parts XVII. to XXIX., forming, with the Statistician's Report, Vol. II.

NOTE.—Part XXVII., Life Tables.

Census (1933) Results.—Bulletins, Nos. 1 to 25. Parts I. to XIV., forming Vol. I., Parts XV. to XXVIII., forming Vol. II., and Parts XXIX. to XXXVII., forming, with Statistician's Report and Australian Life Tables 1932-34, Vol. III.

Census (1947) Results.—Bulletins, Nos. 1 to 24. Parts I. to VIII. For details *see* back page of this volume.

Census of Retail Establishments (1947-48) Results.—Bulletins, Nos. 1 to 7.

Crop Summary.—Annually, 1943-44 to 1948-49.

Dairying Summary.—Monthly; first issue, September, 1937.

Finance.—Bulletins, 1907 to 1916-17 annually; 1917-18 and 1918-19 (one vol.); 1919-20 and 1920-21 (one vol.); 1922-23 to 1948-49 annually.

Food Production and the Consumption of Foodstuffs and Nutrients in Australia.—Half-yearly, 1946-47 to 1947-48; annually, 1948-49.

Frust Summary.—Annually, 1944-45 to 1948-49.

Labour and Industrial Statistics.—Memoranda and Reports, various, to 1913.

Labour Report.—Annually, 1913 to 1948.

Live-stock Summary.—Annually, 1943 to 1949.

Local Government in Australia.—July, 1919.

Manufacturing Industries.—Bulletins on Individual Industries, annually, 1936–37 to 1939–40, 1940–41 (issue incomplete), and 1944–45 to 1948–49.

Monthly Review of Business Statistics.—First issue, October, 1937.

Occupation Survey (1945) Results.—Detailed tables.

Official Year Book of the Commonwealth of Australia.—Annually, 1907 to present issue (No. 38).

Oversea Trade.—Bulletins, annually, 1906 to 1948–49.

Pocket Compendium of Australian Statistics (formerly *Statistical Digest*).—1913, 1914, 1916, and 1918 to 1949 annually.

Population and Vital Statistics.—Bulletins and Reports, various, 1906–1910. *Demography*, 1911 to 1948 annually.

Production.—Bulletin, annually, 1906 to 1947–48. From 1936–37 issued in two parts: Part I. Secondary Industries; Part II. Primary Industries and Total Recorded Production.

Professional Papers.—Various. A full list appears in *Official Year Book* No. 13, p. 3.

Quarterly Summary of Australian Statistics.—First issue, No. 70, December, 1917, replacing *Monthly Summary of Australian Statistics* (Bulletins Nos. 1 to 69).

Social Insurance.—Report to the Hon. the Minister of Trade and Customs, 1910.

Social Statistics.—Bulletins, 1907 to 1915 annually, and 1918.

Superannuation for the Commonwealth Public Service.—Report to the Hon. the Minister for Home Affairs, 1910.

Transport and Communication.—Bulletins, 1906, 1908 to 1916 annually, 1919 to 1930 annually, and 1932 to 1947–48 annually.

Vegetable Summary.—Annually, 1942–43 to 1948–49.

Wages and Prices.—January, 1932.

Wealth.—The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.

Wheat Summary.—Periodically; first issue, July, 1936.

(ii) *Commonwealth Parliamentary and Departmental Reports and Papers*. Lists of the principal official reports and other documents containing statistical information issued from the inauguration of the Commonwealth appear in the *Official Year Books* up to No. 15.

3. *State Publications*.—The chief statistical publications of each State are set out hereunder. Limits of space preclude a further enumeration of the various Departmental Reports, statements of accounts, etc., issued by officials, boards, local government bodies, etc., in each State.

(a) New South Wales—Statistical Register (annual); *Official Year Book of New South Wales* (annual); *Pocket Year Book* (annual); *Statistical Bulletin* (monthly to December, 1919, quarterly to June, 1943, then discontinued to September, 1948); *Monthly Summary of Business Statistics*.

(b) Victoria—Statistical Register (annual to 1916, then discontinued); *Victorian Year Book* (annual); *Statistical Abstracts* (quarterly to 1917, then discontinued to December, 1946).

(c) Queensland—Statistical Register (annual); *Official Year Book*, 1901; A.B.C. of Queensland Statistics (annual to 1936, then discontinued); the Queensland Year Book (annual 1937 to 1941, then discontinued to 1945); Queensland Pocket Year Book (annual).

(d) South Australia—Statistical Register (annual); *Official Year Book*, 1912 and 1913; *Statesman's Pocket Year Book* (annual); *Quarterly Summary of Statistics*.

(e) Western Australia—Statistical Register (annual); *Statistical Abstracts* (quarterly, previously issued monthly to July, 1917); *Pocket Year Book of Western Australia* (annual).

(f) Tasmania—Statistical Register (annual); *Pocket Year Book* (annual); *Monthly Review of Business Statistics*.

§ 3. Select List of Representative Works Dealing with Australia.

(Compiled by the Librarian of the Commonwealth National Library.)

Under each heading a list is first given of the principal standard books which are still in print. This is followed by lists of selected books published during the current period and of official publications, excluding annual reports, of the same period. In the present list the period covered is 1st January, 1948 to 31st December, 1949. A few books which, though published earlier, were received after the compilation of the last issue are also included.

Technical works on Law, Medicine and the pure sciences are excluded.

Where known, the retail price in the country of publication is given, but this is subject to fluctuation.

A copy of each of the works mentioned is preserved in the Library and access thereto may be had by any Commonwealth official or other authorized person.

The Library also publishes an annual catalogue of Australian publications, official papers and books on Australia published overseas, obtainable from the Government Printer at a price of 2s. ; Australian public affairs information service, a monthly subject index to current literature, available gratis from the Library ; and Books published in Australia, a monthly list of books supplied under copyright, also available gratis from the Library.

DIARY OF PRINCIPAL ECONOMIC EVENTS, 1946 to 1949.

The principal economic events for the years 1931 to 1938 were shown on pp. 968 to 977 of the Official Year Book No. 33, those for the years 1939 to 1944 on pp. 1129 to 1141 of the Official Year Book No. 36 and those for the year 1945 were included in the range of years—1945 to 1948—covered in the previous Official Year Book (No. 37).

1946.

The year 1946 was one of reconversion from war to peace. Demobilization continued throughout the year, about 316,000 men and 27,000 women being discharged. Employment (excluding rural and household domestic) increased by 276,000 during the year (259,000 males and 17,000 females). Unemployment remained negligible throughout the year. At the end of the year there was some increase in Victoria following the commencement on 16th October of the metal trades industrial dispute which lasted till May, 1947.

Production of wool and meat during 1945-46 was below the previous year, but the wheat harvest was considerably greater. Unfavourable seasonal conditions during the year caused a substantial fall in the 1946-47 wheat harvest in New South Wales and Queensland, with a consequent fall in total Australian production, but 1946-47 production of meat and wool improved. Work on post-war housing programmes was increasing and during 1946 about 25,000 houses were completed.

Export prices were higher than in 1945 and rose rapidly towards the end of the year, and the total value of exports was considerably higher than in the previous year. Import prices increased about 13 per cent. Retail prices and the basic wage remained steady throughout the year until the 7s. increase in the basic wage granted in December. Average factory earnings increased slowly during the year and in the December quarter were about 4 per cent. above the 1945 December quarter.

8th January.—Commonwealth Government asked Governments of States to confer on five years' plan for stabilization of wheat price at 5s. 2d. a bushel, f.o.b. Australia. (*see* 16th April.)

10th January.—First meeting of General Assembly of United Nations Organization opened in London. Minister for Navy (Mr. N. J. O. Makin) led the Australian delegation.

26th January.—Arrangements made between United Kingdom and Australia, New Zealand, India and South Africa to operate air trunk routes in various parts of the world.

7th February.—In response to a request from Council of UNRRA, Federal Cabinet decided to make a further contribution of £12,000,000 if necessary.

11th February.—Commonwealth Government decision to provide substantial funds for rehabilitation of Australian mining industry and for development of mining projects.

14th February.—Mr. L. G. Melville to attend, as an observer, the first meeting in America of the Board of Governors to establish International Monetary Fund and International Bank for Reconstruction and Development.

25th February.—Commonwealth Government plans for increased annual immigration.

1st March.—Cessation of man-power controls over employment of male labour.

5th March.—Under agreement between British and Australian Governments, free passages to be granted to British service personnel and dependants, and assisted passages to British civilians and dependants, who wish to emigrate to Australia.

22nd March.—Tasmanian Legislative Council rejected a bill to grant price control to Commonwealth for three years.

26th March.—A.C.T.U. lodged with Arbitration Court applications on behalf of 47 unions for right to intervene in claim by Printing Industry Employees' Union for a 40-hour week.

28th March.—Bills introduced by Attorney-General to amend the Constitution regarding—(1) Social Services, (2) Marketing of Primary Products, (3) Industrial Employment. (Subsequently passed by both Houses and submitted to electors. *See* 28th September.)

29th March.—Approval by Federal Cabinet of draft for submission to the United States of America for a reciprocal air transport agreement. (Agreement signed 3rd December, 1946.)

1st April.—Meat workers' industrial dispute in Queensland, involving approximately 7,000 workers. (Lasted until 7th July.)

13th April.—States Grants (Tax Reimbursement) Act, 1946, continuing uniform taxation, assented to.

16th April.—Agricultural Council of Federal and State Ministers for Agriculture decided that uniform legislation should be introduced in the several Parliaments to give effect to Commonwealth Wheat Stabilization Scheme.

2nd May.—Inauguration of Commonwealth Employment Service (which functioned formerly as the Commonwealth man-power organization).

6th May.—Commonwealth Government's proposals for complete medical service for Australia, free of charge, brought before conference of State Ministers of Health.

7th May.—Victorian Government sub-committee report on brown coal development submitted to full State Cabinet plan for making Victoria independent of New South Wales black coal supplies.

16th May.—Announced by General Manager of Commonwealth Aircraft Corporation Pty. Ltd. (Mr. L. J. Wackett) that De Havilland Vampire jet-propelled fighters would be built in Australia.

20th May.—Hearing of case originating in claim by Printing Industry Employees' Union for 40-hour week commenced in Commonwealth Arbitration Court.

23rd May.—Agreement reached between Australian and United Kingdom Governments for relief from double taxation. (*See* also 2nd August.)

10th June.—Final settlement of Lend-Lease and reciprocal aid between Australia and United States of America.

13th June.—Appointment of Commonwealth Insurance Commissioner under Life Insurance Act 1945 (assented to 16th August, 1945).

21st June.—Wheat Industry Stabilization Bill introduced in House of Representatives. (Act assented to 9th August.)

Overseas Telecommunications Bill to provide for establishment and operation of overseas telegraphic, telephone and similar services by the Commonwealth introduced. (Act assented to 7th August.)

1st July.—United Kingdom and Dominion Wool Disposals Ltd., known as Joint Organization, commenced operations.

24th July.—Coal Industry Bill introduced in House of Representatives providing *inter alia* for the setting up of a joint Commonwealth-State authority. (Act assented to 15th August. Complementary State Act assented to 25th September.)

2nd August.—Details of double taxation relief agreement between Britain and Australia announced. (Agreement signed 29th October; amending Act to Income Tax Assessment Act incorporating agreement assented to 3rd June, 1947.)

Railway Standardization Agreement Bill authorized the Commonwealth to act in an agreement with New South Wales, Victoria and South Australia. (Commonwealth Act assented to 15th August; State complementary Acts—South Australia, 10th December; Victoria, 21st December, 1948. New South Wales did not ratify agreement.)

15th August.—An Australian conversion loan of \$20,000,000 for a ten year period at 3½ per cent. floated in New York. (First of a series of operations undertaken by the Commonwealth in New York.)

22nd August.—Commonwealth and State Governments agreed to carry out programme of housing to provide employment in building construction industry for a minimum of 130,000 men over next ten years.

31st August.—South Australian electricity undertakings passed from private to State control.

2nd September.—Wool sales by auction resumed in Sydney following termination of war-time appraisal system.

28th September.—Constitution Alteration Referendum on Social Services, Organized Marketing of Primary Products and Industrial Employment resulted in approval for Social Services proposal only. (Act assented to on 19th December.)

16th October.—Ironworkers' and moulders' industrial dispute commenced in two iron foundries in Victoria. (By 24th October it extended to all iron foundries, and employees in engineering and allied trades were later involved. Dispute lasted until 7th May, 1947.)

30th October.—Commonwealth Government moved in Arbitration Court for investigation of basic wage. Announced that Court had "accepted broadly" that 40-hour week should be basis of working hours in Australia.

31st October.—Basic wage inquiry, adjourned in 1940, to be re-opened.

14th November.—Commonwealth Budget for 1946-47 introduced, providing for expenditure of £444,000,000 and revenue of £385,000,000. Estimated expenditure on Defence and Post-war Charges was £221,000,000 (including £35,000,000 for re-establishment and repatriation), on social services £68,000,000 and on new works £26,000,000. Clothing and household drapery would be exempted from Sales Tax, the general rate of Sales Tax to be reduced to 10 per cent. and Customs and Excise duties to be lowered. With income tax reductions made earlier in the year, these concessions would reduce the annual yield from taxation by about £37,000,000.

18th November.—Interstate executive of A.C.T.U. decided to apply to Arbitration Court for increase of £1 in basic wage.

20th November.—Experimental rocket range and supporting establishments for guided projectiles to be set up at Mount Eba (South Australia). Estimated cost £6,000,000. (Site subsequently changed to Woomera, 90 miles south-east of Mount Eba.)

21st November.—Defence (Transitional Provisions) Bill introduced in House of Representatives. (Act assented to 14th December.)

7th December.—Construction commenced on new Burrendong dam on Macquarie River, 20 miles from Wellington, New South Wales, to provide a catchment area of 5,360 square miles, at a cost of £2,000,000.

11th December.—Members of Gas Employees' Union in Melbourne decided to strike until claims for wage increases met. (Recommendation of A.C.T.U. to return to work on 16th January, 1947 accepted by gas workers, including those involved in Sydney and Adelaide.)

13th December.—Interim basic wage rise of 7s. in all capital cities (except Hobart, 6s.) announced. To operate from first pay period in December.

14th December.—Qantas Empire Airways Agreement Act, authorizing Government to acquire United Kingdom's interest in Qantas Empire Airways Ltd., assented to.

31st December.—With expiry of National Security Act, at midnight, 183 sets of regulations which restricted activities of citizens during war ceased to operate; 61 sets of regulations continued to operate for a further year under Defence (Transitional Provisions) Act. Ceiling price control on shares, and conditions regarding minimum holding period of shares before resale now removed.

1947.

During 1947 approximately 30,000 men and 3,000 women were discharged from the Services, rather more than two-thirds of them in the first half of the year. Employment (excluding rural and household domestic) increased by about 141,000 (114,000 males and 27,000 females). Unemployment remained negligible during the year; shortage of labour was a common complaint by employers. The free and assisted migration scheme came into operation during the year and an excess of 12,000 permanent departures over permanent arrivals in 1946 was converted into an excess of 12,000 arrivals over departures.

Seasonal conditions generally were very favourable and despite some losses due to rust and wet weather during the harvesting period, the 1947-48 wheat harvest was an all-time record of about 220,000,000 bushels. Meat and butter production were higher than in the previous season and wool only slightly lower. During 1947 nearly 39,000 houses were completed.

Export prices continued to rise rapidly, and at the close of the year were about 35 per cent. above the level at the beginning of the year. Total value of exports was over £300,000,000 and about 20 per cent. higher than in 1946. Import prices increased 17 per cent. above the level at the end of 1946; imports nearly 60 per cent. as compared with 1946, notwithstanding the imposition during the second half of the year of increasingly severe restrictions on imports from dollar areas. Retail prices increased by less than 6 per cent. in the year and wholesale prices by about 13 per cent. After the removal of control at the end of 1946 share prices advanced substantially. Following the settlement of the metal trades dispute in Victoria margins prescribed in the metal trades award were substantially increased, and similar increases were subsequently granted in other industries. Average factory earnings in the last quarter of the year were 13 per cent. above the previous year.

After a period of relative stability over the previous five years, national income started to rise, and gross private investment, which had been 14 per cent. of gross national product in 1945-46, rose to about 20 per cent. in 1947.

6th January.—Stock exchanges conducted business on free market, following lifting after five years of Government restrictions on share dealings.

Abandonment of war-time price stabilization subsidies by Commonwealth Government commenced with withdrawal of subsidy on tobacco, resulting in immediate price increase.

14th February.—Termination of fourth and final stage of demobilization of Australian fighting forces reached. Forces reduced to 60,000.

4th March.—Australia to make gift of £A.25,000,000 to Britain, in form of reduction of Britain's sterling debts in Australia. (Act appropriating grant assented to 11th June.)

13th March.—International Monetary Agreements Bill approving Australia becoming a member of International Monetary Fund and International Bank for Reconstruction and Development introduced. (Act assented to 2nd April. Australia's application for membership approved 25th May.)

19th March.—Majority of Full Arbitration Court decided that Basic Wage and 40-hour Week cases would be heard separately.

23rd March.—Extension of dispute in Victoria involving members of Amalgamated Engineering Union caused stoppage of all tramway buses, and cuts in suburban and country rail services. (See 16th October, 1946.)

3rd April.—Wage pegging regulations to be relaxed to give all industrial authorities (Commonwealth and State) power to alter rates of pay in any type of case, provided the Chief Judge of the Commonwealth Arbitration Court is satisfied that an alteration is not opposed to national interests.

23rd April.—Full Arbitration Court ordered deregistration of Amalgamated Engineering Union, to take effect after fourteen days unless the union instructed its members to return to work in meantime. (Further move in dispute originating with ironworkers and moulders in Victoria on 16th October, 1946. See above.)

5th May.—After compulsory conference of parties to the industrial dispute in Victoria, representatives of Unions and employers agreed on terms of settlement of Metal Trades dispute which had existed in Victoria since October, 1946. (See 16th October, 1946, and subsequent dates.)

8th May.—Two hundred Local Government bodies in Australia directed to bank with the Commonwealth Bank from 1st August.

28th May.—Writ lodged in High Court by Melbourne City Council challenging validity of Banking Act.

26th June.—Following settlement of metal trades dispute in Victoria (see above), Federal Arbitration Court granted substantial marginal increases to metal trades' employees in higher classifications but not to those in lower paid positions.

30th June.—Census of Australia. First since 1933.

1st July.—Forty-hour week comes into operation in New South Wales for all employees working under State awards.

3rd July.—Purchase by Commonwealth Government of shares in Qantas Empire Airways Ltd. held by Queensland and Northern Territory Aerial Services Ltd. (approving Act assented to 24th June, 1948). Qantas Empire Airways Ltd. now completely owned by Commonwealth Government. (See 14th December, 1946.)

23rd July.—Australia agreed to take 4,000 displaced persons as migrants this year through International Refugees Organization, and 12,000 each following year if Organization can supply shipping.

1st August.—Charges imposed by Commonwealth Government on airline operators in Australia for use of civil airways facilities provided by Commonwealth.

13th August.—Full High Court declared invalid Section 48 of Banking Act 1945 requiring municipal councils to transfer their accounts from private banks to Commonwealth Bank. (See 8th and 28th May.)

22nd August.—Government authorized resumption of private trading with Japan.

Prime Minister announced heavy reduction of all imports from dollar areas and severe restrictions on dollar advances for travellers.

8th September.—Federal Arbitration Court gave judgment reducing standard weekly hours of work in industry from 44 to 40 as from 1st January, 1948.

19th September.—Commonwealth Budget for 1947-48 presented, providing for expenditure of £427,000,000 and revenue of £397,000,000. Estimated expenditure on Defence and Post-war Charges was £168,000,000 (including £39,000,000 for re-establishment and repatriation), on social services £77,000,000 and on new works £33,000,000. The abolition of War-time Company Tax, the suspension of the Gold Tax and concessions in Sales Tax, with the income taxation reductions made earlier in the year, were estimated to reduce the taxation yield by about £42,000,000 a year.

15th October.—Banking Bill to nationalize Australian trading banks introduced into House of Representatives. (Act assented to 27th November.)

17th October.—British Food Minister announced that Australia will be asked to launch a great food-growing scheme to help Britain. It provides for long-term contracts for the supply of meat, wheat, dairy products, nuts and other food for which Britain will pay by increased exports.

5th November.—Defence (Transitional Provisions) Bill introduced in House of Representatives to continue for another year controls on food, prices, rent, capital issues and land sales. Other regulations were amended or discontinued. (Act assented to 11th December.)

27th November.—Constitution Alteration (Rents and Prices) Bill introduced into House of Representatives. (Bill subsequently passed both Houses. See 29th May, 1948, for referendum results.)

28th November.—Trading banks and States of Victoria and South Australia (Western Australia later) applied to High Court for writs to prevent Federal Government acquiring monopoly of banking business. (See 15th October.)

11th December.—Agreement signed for development of Blair Athol coal-fields in Queensland through expenditure of about £18,000,000 of British capital.

18th December.—Announcement of big wheat deal, under which Australia contracted to sell to Britain 80,000,000 bushels from 1947-48 harvest at 17s. per bushel (Australian currency) and 25,000,000 bushels to India at 18s. 6d.

1948.

Employment continued to increase during 1948, the total increase (excluding rural and household domestic) being about 88,000 (63,000 males and 25,000 females). The number on unemployment benefit remained negligible during the whole year and labour shortages continued fairly generally. The migration programme was carried on during the year with increasing vigour and permanent arrivals exceeded permanent departures by 48,000.

Although black coal production for the whole of Australia reached 14,800,000 tons, there were at times serious shortages resulting in restrictions in electricity and gas supplies and in transport services. Seasonal conditions continued favourable, the 1948-49 wool clip being slightly larger than in the previous year, and the wheat crop considerably above average although well below the previous year. There were about 48,000 new houses completed during 1948.

Exports rose to over £500,000,000, an increase of 60 per cent. over 1947, and imports to about £380,000,000, an increase of 40 per cent. over 1947. Export prices increased more than 25 per cent. during the year and import prices by 6 per cent. Retail prices increased about 10 per cent. during the year, wholesale prices about 14 per cent. Average factory earnings in the last quarter were 13 per cent. above the last quarter of 1947.

Partly as a result of increasing prices, national income continued to rise, and gross private investment continued at about 20 per cent. of gross national product.

1st January.—Forty-hour week became effective throughout Australia.

16th January.—Emergency Transport Bill, giving sweeping powers to Victorian Government to maintain essential services in any future emergency, passed by Victorian Legislative Assembly. (Assented to 20th January, proclaimed 15th November.)

23rd January.—Secretary to the Treasury (Mr. S. G. McFarlane) appointed fourteenth director of the International Monetary Fund and Bank of World Reconstruction and Development. The Commonwealth Statistician (Dr. Roland Wilson) to be alternate director.

2nd February.—Railway dispute on wages awards in Queensland involving about 19,000 railwaymen. (Lasted till 4th April.)

9th February.—Bank nationalization case opened in Full High Court in Melbourne. (See 15th October and 28th November, 1947, and 11th August, 1948.)

20th February.—Major water conservation works in £25,000,000 plan for "Drought proofing" Victoria, involving, amongst other works, the enlargement of Eildon reservoir, commenced.

27th February.—Drastic powers assumed by Queensland Government to end railway dispute. State of emergency declared.

10th March.—Queensland Government Industrial Law Amendment Act of 1948 assented to, granting police extraordinary powers to prevent "picketing". (Act repealed 16th September.)

25th March.—International trade charter signed in Havana.

22nd April.—International Wheat Agreement Bill introduced into Parliament. (Assented to 24th June. Failure of United States of America and other nations to ratify agreement rendered it inoperative.)

29th April.—Minister for Defence announced five-year defence programme of £250,000,000 including £33,500,000 for scientific research.

5th May.—Minister for Housing in New South Wales announced scheme for £8,000,000 housing project to meet industrial expansion, involving 5,000 homes in the Wollongong-Port Kembla district. Scheme will take five years to complete.

29th May.—Constitution Alteration (Rents and Prices) Referendum resulted in majorities in all States against proposal.

3rd June.—Australian Iron and Steel Ltd. plans to spend £20,000,000 in the next ten years on extensions to its Port Kembla works to include a new tinplate mill and blast furnaces on an area of more than two square miles.

21st June.—Conference between Prime Minister and State Premiers to discuss organization of price control by the respective states when control is relinquished by Commonwealth in September.

22nd June.—Meat and clothes rationing ceased throughout Australia.

3rd July.—Prime Minister left for London to discuss empire trade and other problems.

12th July.—Announcement of modified wheat stabilization plan guaranteeing a price of 6s. 3d. per bushel f.o.r. ports for bulk wheat. (Subsequently adopted by majority of growers in four main wheat producing States and ratified by Commonwealth—Wheat Industry Stabilization Act assented to 25th November—and State Governments, the plan will operate for the five years 1948-49 to 1952-53).

11th August.—Judgment delivered by Full High Court declaring invalid certain vital sections of Banking Act 1947. (*See* 9th February.)

16th August.—Control of rents passed from Commonwealth to States.

19th August.—New Zealand currency restored to parity with sterling.

24th August.—Announcement of increase from £360,000,000 to £569,000,000 in national works programme to cushion a possible depression during the next five years, covering 6,245 works projects throughout Australia.

2nd September.—Minister for Commerce and Agriculture announced that, under terms of a seven-year agreement operating from June, 1948, Australia will ship to United Kingdom the total exportable surplus of butter and cheese, less agreed quantities for other markets.

8th September.—Commonwealth Budget for 1948-49 introduced, providing for expenditure of £511,000,000 and revenue of £493,000,000. Estimated expenditure on Defence and Post-war Charges was £199,000,000 (including £10,000,000 United Kingdom Grant, £38,000,000 for re-establishment and repatriation and £23,000,000 to be set aside for war gratuities), on social services £88,500,000, and on capital works and services £38,000,000. Reductions in Income Tax, Social Services Contribution, Sales Tax and Excise Duty were expected to reduce the yield from taxation by about £29,000,000 a year.

20th September.—Control of prices taken over by individual States from Commonwealth. Thirty thousand items released from price control, but control continued on essential commodities and services, and house and agricultural land sales (about 20,000 items).

30th September.—Bill introduced into House of Representatives providing for acceptance by Australia of the Havana Charter for an International Trade Organization and a General Agreement on Tariffs and Trade. (Act assented to 17th December. Actual acceptance, however, conditional on that of United Kingdom and United States of America.)

6th October.—Coal miners' dispute in Southern coal-fields, New South Wales (Kemira Tunnel Dispute), resulting in general stoppage of coal production. (Settled 8th November.)

20th October.—Defence (Transitional Provisions) Bill introduced to extend for further twelve months certain National Security Regulations. (Act assented to 21st December.)

24th October.—Announced that Joint Coal Board would spend £16,000,000 on mechanizing and modernizing Australian coal mines.

10th November.—Judicial Committee of Privy Council granted Commonwealth Government leave to appeal against the judgment of the High Court of Australia, which declared Section 46 of the Banking Act 1947 invalid. (*See* 26th July, 1949.)

12th November.—Announcement of new agreement under which Britain will buy more than half of Australia's dried fruit production for the next five years.

15th November.—Victorian Government proclaimed as law the Essential Services Act. (*See* 16th January.)

22nd November.—Legislation approved to establish and constitute an Australian Shipping Board to run a Commonwealth line of ships. (Shipping Bill introduced in Senate 9th December; Act assented to 25th March, 1949.)

29th November.—New Australian made car, the "Holden", displayed publicly for first time.

1949.

A general black-coal strike lasting seven weeks in July and August, together with heavy flooding in the northern coal fields of New South Wales, seriously disrupted productive activity, large coal consumers such as the steel and cement producing industries being particularly affected. During this period of industrial dislocation the numbers of persons unemployed rose sharply to more than 100,000, but otherwise conditions of labour shortage continued throughout the year. Employment (excluding rural and household domestic) increased by about 80,000 (60,000 males and 20,000 females). Most of this increase was due to immigration, which was about three times as great as in 1948. Permanent arrivals exceeded permanent departures by about 150,000.

Following the black-coal strike, secondary industry revived rapidly and during the last three or four months of 1949 production of basic essentials such as coal, gas, electricity, iron and steel, and cement was well above the level of the previous year. There were about 53,000 new houses completed during 1949.

For the third year in succession seasonal conditions were exceptionally favorable, although heavy rains and floodings did considerable damage in the northern and eastern areas of Australia. Wool production in 1949-50 was about 10 per cent. higher than in the previous year and wheat production was very close to the all-time record established in 1947-48. With increases in wool prices more than balancing falls in wheat and metal prices, exports continued to rise in value. The value of imports rose even faster, the main increases being in motor vehicles and machinery of all kinds.

Retail and wholesale prices increased by about 10 per cent. during the year.

21st January.—Prime Minister stated, that before proceeding with plans for the development of the Australian Northern Territory, the Federal Government had requested British Government to agree to take, at a reasonable price, all surplus beef produced in Australia (see 28th April).

31st January.—National Savings Campaign launched by the Prime Minister on termination of Savings Certificate Scheme.

7th February.—Announcement of plans to form £1,000,000 Australian company to produce a cheap four-seater aluminium car.

8th February.—Sydney storemen and packers decided to refuse to deliver wool, skins, tallow and hides from stores unless claim for 30s. a week increase granted within seven days. (Ban came into force on 16th February. Dispute settled 30th March).

12th February.—Completion of sowing of 30,500 acres of sorghum on the Peak Downs for the Queensland-British Food Corporation (see 17th October, 1947).

13th February.—The Commonwealth to build hostels in Newcastle, Port Kembla, Adelaide and Melbourne to accommodate 100,000 European migrants to arrive in the next 18 months.

14th February.—A conference of Federal, New South Wales and Victorian Ministers under chairmanship of the Federal Minister for Works and Housing adopted proposals for the diversion of the Snowy River.

16th February.—Decision of Commonwealth to admit women to clerical and professional grades of Commonwealth Public Service.

24th February.—Bills introduced to reduce rates of Income Tax and Social Services Contribution payable by individuals—to take effect from 1st July. (Acts assented to 12th March.)

4th March.—Ending of special hearing by Judge Kelly of Kemira Tunnel Dispute. (See 6th October, 1948. On 31st March judgment given that the Kemira Tunnel was to be driven by members of the Australian Workers' Union.)

10th March.—Pharmaceutical Benefits (Amending Act) Bill introduced, which provided, *inter alia*, for doctors to write prescriptions within the formulary on official forms. (Act assented to 25th March; subsequently amended—7th July—to permit doctors not to use official form if patients so requested. It operated on 25th July, when Federal Council of British Medical Association challenged validity of Act in High Court. Act declared invalid 7th October.)

16th March.—Bill authorizing construction of dams and weirs at Menindee, New South Wales at estimated cost of £2,300,000 introduced in New South Wales Lower House. Storage capacity of project is approximately 2,000,000 acre feet of water. Scheme will supply water to more than 1,000,000 acres of pastures. (Act assented to 18th April, 1949. Works commenced 12th October, 1949.)

21st March.—Agreement of wheat importing nations to purchase 450,000,000 bushels of wheat a year, mainly from United States of America, Australia and Canada—Russia and Argentine not partners to agreement. Australia's share 80,000,000 bushels a year. (Bill to approve acceptance of agreement by Australia introduced 19th May. Act assented to 30th June.)

15th April.—Agreement between Australia and New Zealand to give citizens of each country full Social Service benefits when resident in the other.

28th April.—Australian Prime Minister and British Minister of Food announced agreement to arrangements for increasing meat exports from Australia to United Kingdom. (Bill introduced 18th October for grant of financial assistance to Queensland and Western Australia for development of meat production by improving roads and other facilities for movement of live-stock. Act assented to 28th October.)

11th May.—Representatives of Australia, New Zealand and South Africa met in London to discuss promotion of use of wool in all countries, possible co-operation with South American countries, future development in other regions, and scientific research.

16th May.—New South Wales State Cabinet approved restrictions on use of electricity by industry and commercial and domestic users. Industry in County of Cumberland to reduce consumption of electricity by 30 per cent. as from 1st June.

Victorian State Cabinet ratified Murray River Agreement which, *inter alia*, provides for enlargement of Hume Weir and installation of hydro-electric plant. Agreement already ratified by Governments of Commonwealth, New South Wales and South Australia.

17th May.—Rural Finance Corporation Bill introduced in Victorian Legislative Assembly, providing for an institution to afford additional and more effective credit facilities for primary producers and those conducting or desirous of establishing secondary industries in country districts. (Assented to 8th November.)

Hearing of £10 per week basic wage claim commenced. (On 20th May full Arbitration Court refused to hear claim by Australian Council of Trade Unions for interim basic wage increase of £2 per week. Hearing of £10 per week basic wage claim adjourned until 26th May.)

Governor of Commonwealth Bank announced current advances policy to be observed by banks, designed to limit excessive demand for goods generally, and for capital goods in particular, in relation to supplies available.

19th May.—Conference between representatives of Federal and State Governments, Combined Colliery Proprietors' Association, Joint Coal Board, and Combined Mining Unions' Council to discuss coal miners' claims for 35-hour week, 30s. weekly wage increase, long service leave, nationalization of the coal industry and colliery and mining town amenities. (Conference subsequently collapsed—30th May—colliery proprietors refusing to limit discussion to mining unions' log of claims.)

20th May.—Bill introduced, providing for establishment of Australian Whaling Commission to carry on whaling activities in or near Australian waters. (Act assented to 12th July.)

25th May.—Bill introduced for construction and operation of works for the generation of hydro-electric power in the Snowy Mountains area for defence purposes and consumption in the Australian Capital Territory, and constituting the Snowy Mountains Hydro-electric Authority. (Assented to 7th July, 1949. Scheme officially commenced 17th October.)

26th May.—Federal Cabinet decided to make joint purchase with New Zealand Government of Christmas Island phosphate deposits. Deposits, estimated at 25 to 30 million tons, will cost £2,750,000. (Christmas Island Agreement Bill introduced 26th October; Act assented to 29th October.)

Central Council of Miners' Federation decided that, unless settlement of claims reached by 30th, nation-wide one-day stop-work meetings would be held to discuss future actions. (Meetings postponed till 16th June, following intervention by Coal Industry Tribunal calling a compulsory conference.)

6th June.—Full High Court unanimously declared invalid National Security (Liquid Fuel) Regulations, thus restoring free retailing of petrol. (Judgment given in a test case on the validity of petrol rationing which had been removed from the Brisbane Petty Sessions on 4th March on application by the Commonwealth Attorney-General. Court, in same judgment, also held that Women's Employment Regulations, and certain provisions of the National Security (War Service Moratorium) Regulations were void.)

9th June.—Coal Industry Tribunal stated it would announce a draft award on long-service leave for coal-miners on 14th. (Announcement withheld because of stop-work threat.)

10th June.—Announced that Victorian State and Municipal authorities plan to spend £46,000,000 in the next eight years in order to expand electricity generation and make it less dependent on supplies of black coal.

16th June.—New South Wales miners at stop-work meetings voted in favour of general coal strike on 27th unless all claims met in full. Endorsed by miners in all other States except Western Australia.

17th June.—Joint Coal Board announced most drastic coal rationing ever imposed in Australia. Floods on northern New South Wales coal-fields stopped delivery of coal.

22nd June.—Construction work on Dumaresq River marked the beginning of the Border River Scheme, designed to harness the waters of the Barwon, Macintyre and Dumaresq Rivers, separating New South Wales and Queensland.

27th June.—All Australian black coal mines idle through dispute over claims for 35-hour week, 30s. a week wage increase and long-service leave. Transport, power, lighting and gas supplies severely restricted in all States; much unemployment caused, especially in New South Wales. (See also 19th May, 26th May, 9th June, 16th June, 17th June, 29th June, 27th July, 2nd August, 15th August and 7th September. Work resumed 15th August.)

28th June.—Following abolition of Stevedoring Industry Commission, Stevedoring Industry Bill introduced to establish Australian Stevedoring Industry Board. (Assented to 18th July.)

29th June.—National Emergency (Coal Strike) Act, making illegal any kind of payment in support of coal strike, assented to. (Validity of Act subsequently upheld in High Court. Sentences and fines later imposed on union executive officers and unions by Chief Judge of Arbitration Court for contempt of orders made by him under Act.)

30th June.—Bill introduced to enable Commonwealth Government to require liquid fuel importers to hold stocks at specified places for defence requirements. (Assented to 12th July.)

8th July.—Australian Wool Growers' Council decided to adopt a new wool marketing scheme, embracing Australia, Great Britain, New Zealand and South Africa, to replace the Joint Organization, when existing scheme ends. (On 31st March, 1950 the Prime Minister announced the decision, at the London Wool Conference, of representatives of the four Governments concerned to continue the Joint Wool Organization scheme for the time being on its present basis.)

11th July.—Air transport agreement between Australia and India signed, to prevent uneconomic competition, for collaboration on fares and freights, and for reciprocal traffic rights.

12th July.—Prime Minister stated that Commonwealth Government would increase subsidy paid to certain gold mines. Rate of assistance to be raised from 4 to 6 per cent. of paid-up capital.

13th July.—Ministerial conference at Canberra agreed that final third of Snowy River waters be diverted into River Murray. New dam to be built on Upper Murray to assist in providing Murray Valley with extra 830,000 acre feet of irrigation water each year.

19th July.—Commonwealth Finance Minister's Conference in London recommended 25 per cent. cut in dollar imports. (Approved 3rd August by Federal Cabinet sub-committee.)

26th July.—Privy Council dismissed Commonwealth Government's appeal against High Court's invalidation of Commonwealth's bank nationalization legislation. (On 26th October reasons announced for dismissal of appeal were—(1) Commonwealth Government did not possess a certificate from High Court in terms of section 74 of the Constitution, (2) in any case, section 46 of Banking Act, empowering Federal Treasurer to order a bank to stop trading, infringed section 92 of the Constitution.)

27th July.—Victorian State Government proclaimed state of emergency, and invoked the provisions of the Essential Services Act to forbid strikes in certain industries proclaimed to be essential (see 27th June—Australian black coal mines dispute).

2nd August.—Troops commenced cutting coal from open-cut mines in New South Wales.

15th August.—General black coal strike ended following aggregate meetings of miners which rejected recommendation of Central Council of Miners' Federation for conference with Commonwealth and State Governments, whereupon Central Council ordered resumption of work (*see* 27th June).

Announced that experiments in air-freighting beef carcasses in north-western Australia had proved successful.

18th August.—Federal Government agreed to waive all duties on essential materials which States find necessary to import, mainly building materials, steel products and locomotives, because they are unobtainable in Australia.

Prime Minister stated that he would recommend to Cabinet a special grant of £8,000,000 to State Governments, to relieve losses incurred in coal strike. (Bill introduced 7th September, assented to 27th October.)

7th September.—Introduction of 1949–50 Commonwealth Budget, providing for expenditure of £541,300,000 and revenue of £532,600,000 on basis of existing legislation and commitments. Estimated expenditure on War and Repatriation (1939–45) Services was £101,000,000 and on Defence Services £64,000,000—less estimated credits of £11,000,000; on statutory payments to National Welfare Fund £121,000,000; and on Capital Works and Services £53,200,000. Proposals for Income Tax extensions of depreciation allowances and of life assurance and superannuation concessional rebates, Sales Tax reductions and exemptions, a reduction in Entertainments Tax, and remissions in Customs, Excise and Primage Duties will reduce revenue by £9,600,000 a year. Expenditure proposals included a further grant of £10,000,000 to the United Kingdom, additional payments of £9,000,000 to the States and a payment of £6,700,000 from Trust Fund balances to the War Gratuity Reserve. Taking these proposals into account, net revenue for 1949–50 was estimated at £532,000,000 and expenditure at £567,000,000, leaving £35,000,000 to be financed from Loan Fund.

Coal Industry Tribunal granted long-service leave to miners throughout Australia. New award provides for thirteen weeks' leave on full pay after a minimum of ten years' service. No miners to commence long-service leave before June, 1954, owing to present manpower shortage in the coal industry.

19th September.—Prime Minister announced devaluation of sterling against American dollar, and commensurate devaluation, as from commencement of business to-day, of Australian pound to 2 dollars 24 cents; new gold price announced—£A.15 9s. 10d. per fine ounce.

2nd October.—Prime Minister announced establishment of Immigration Planning Council, to assist in smooth and speedy assimilation of migrants into industry and the community.

12th October.—Defence (Transitional Provisions) Bill 1949 introduced, preserving until 31st December, 1950 certain National Security Regulations and others at present in force, making amendments to some, and discontinuing several regulations and orders as from 1st January, 1950. (Assented to 28th October.)

17th October.—Official opening by Governor-General of Snowy River project.

20th October.—Agreement on rail standardization (replacing original agreement—*see* 2nd August, 1946) signed by Commonwealth and South Australian Governments. (Railway Standardization (South Australia) Agreement Bill 1949 introduced in House of Representatives on 21st October—assented to 28th October. Complementary State Act assented to 1st December.)

Announced that Australian Government had arranged with International Monetary Fund for an initial drawing from fund of \$20,000,000.

15th November.—Re-introduction of petrol rationing in all States except Tasmania (*see* 6th June).

8th December.—Announcement of new sugar agreement with United Kingdom. In conformity with existing arrangements United Kingdom would buy all of Australia's exportable sugar surplus up to end of 1952; from 1953 to 1957 arrangements to be made to find a market for 500,000 tons of Australian sugar annually in British Commonwealth preferential market—300,000 tons to be absorbed in United Kingdom market at a guaranteed price to be negotiated annually.

12th December.—Coal Industry Tribunal rejected Miners' Federation claim for reduction of working hours from 40 to 35 per week in coal industry in five States.

APPENDIX.

(Recent information which has come to hand since the various chapters were sent to press is given hereunder.)

CHAPTER III.—GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

Numbers of Ministers and Members of the Legislatures, pp. 74 and 79.—The following table shows the numbers of ministers and members in each of the legislative chambers at 30th September, 1950.

MINISTERS AND MEMBERS OF COMMONWEALTH AND STATE PARLIAMENTS,
30th SEPTEMBER, 1950.

		C'wealth.		N.S.W.		Vic.		Q'land.		S. Aust.		W. Aust.		Tas.		Total.	
		Minist'rs.	Members.	Minist'rs.	Members.	Minist'rs.	Members.	Minist'rs.	Members.	Minist'rs.	Members.	Minist'rs.	Members.	Minist'rs.	Members.	Minist'rs.	Members.
Upper House	..	5	60	2	60	4	34	(a)	(a)	2	20	2	30	..	19	15	223

(a) All electorates contested, and, except for the Territories, numbers identical for Senate and House of Representatives.

There were 505,275 informal votes (11 per cent.) cast for the Senate election, and 93,604 (2 per cent.) for the House of Representatives election.

Double Dissolution, p. 81.—On 19th March, 1951, for the second time in history, a double dissolution of the Commonwealth Parliament was proclaimed. The Governor-General granted the Prime Minister's request, based on the ground that the Senate, by referring the Commonwealth Bank Bill 1950 (No. 2) to a Select Committee, after it had already amended it more than three months earlier in a manner unacceptable to the House of Representatives, had "failed to pass it". (See p. 17 section 57 of the Constitution.)

The Parliaments of the States—Particulars of Elections, pp. 84-91.—The following table shows particulars of the 1950 elections for the Lower Houses of each State :—

STATE PARLIAMENTS : LOWER HOUSE ELECTIONS, 1950.

§ 6. Cost of Parliamentary Government, pp. 108-9.

The cost of Parliamentary Government, Commonwealth and individual States, for the year 1948-49 was as follows:—

Commonwealth, £903,853 (2s. 4d. per head); New South Wales, £367,383 (2s. 5d.); Victoria, £263,455 (2s. 6d.); Queensland, £199,326 (3s. 6d.); South Australia, £142,858 (4s. 4d.); Western Australia, £181,227 (6s. 11d.); Tasmania, £113,643 (8s. 6d.); and total, £2,171,745 (5s. 7d.).

The amounts expended under the major headings for all Governments during 1948-49 were:—Governor-General or Governor, £215,910; Ministry, £179,493; Parliament, £1,484,148; Electoral, £279,085.

§ 7. Government Employees.

Australia, 1950, p. 110.—The number of Government employees in Australia in June, 1950 was as follows:—

Commonwealth Government: Males, 156,332; Females, 44,970; Persons, 201,302.
State Government and Semi-Government Bodies: Males, 337,196; Females, 58,146; Persons, 395,342.
Local Government Authorities: Males, 59,988; Females, 4,453; Persons, 64,441.
Total: Males, 553,516; Females, 107,569; Persons, 661,085.

CHAPTER IV.—LAND TENURE AND SETTLEMENT.

§ 9. Settlement of Returned Service Personnel: 1939-45 War.

War Service Land Settlement Scheme, p. 133.—At 30th June, 1950 an area of 10,908,526 acres had been submitted by the several States for land settlement. Of this, 8,313,345 acres had been approved by the Commonwealth for acquisition, and 7,159,422 acres had actually been acquired by the States. The acreages and holdings allotted to ex-servicemen by the States at 30th June, 1950 were as follows:—New South Wales, 4,442,251 (1,455); Victoria, 530,973 (1,163); Queensland, 152,940 (289); South Australia, 46,118 (195); Western Australia, 633,736 (341); Tasmania, 298 (2); total, 5,806,316 (3,445).

§ 11. Alienation and Occupation of Crown Lands.

Summary, p. 145.—The alienation and occupation of crown lands in each State and Territory at 31st December, 1949, were as follows:—

ALIENATION AND OCCUPATION OF CROWN LANDS : AUSTRALIA, 31st DECEMBER, 1949.

(a) Excludes Northern Territory.

(b) Includes vehicles registered as primary producers' vehicles.

Survey of Motor Vehicles, 1947-48.—A survey of motor vehicles on the roads during 1947-48 was carried out by the Commonwealth Statistician in collaboration with the Government Statisticians and Road Transport authorities in each State. The survey covered such items as make, year of model, type of vehicle, horse-power and carrying capacity, etc., normally shown on motor registration forms, and also supplementary particulars such as those regarding purpose (private or business) obtained either as special addenda to the registration form of 1947-48 or on special forms collected with registration papers.

Results were published in a series of bulletins dealing with each State separately and with the Commonwealth as a whole, and summarized particulars were included in *Transport and Communication Bulletin* No. 40—1948-49 published by this Bureau.

H. AVIATION.

Statistical Summary, pp. 203-4.—The following is a summary of civil aviation for Australia in 1948-49 :—At 30th June, 1949—Registered aircraft owners, 335 ; registered aircraft, 748 ; pilots' licences—private 756 ; commercial 481 ; student, 1,169 ; 1st Class airline transport, 397 ; 2nd Class, 27 ; 3rd Class, 363 ; during 1948-49—Accidents—persons killed, 42 ; persons injured, 21.

Regular internal services' operations during 1948-49 showed the following results :—Hours flown, 224,853 ; miles flown, 35,242,000 ; paying passengers, 1,406,883 ; paying passenger-miles, 566,038,000 ; Freight—Actual tons, 33,381 ; ton-miles, 15,240,000 ; Mail—Actual tons, 1,580 ; ton-miles, 789,000.

The operations of services between Australia and oversea countries during 1948-49 were as follows :—Route-miles, 29,695 ; hours flown, 40,262 ; miles flown, 7,982,000 ; paying passengers, 45,296 ; paying passenger-miles, 144,869,000 ; Freight—Actual tons, 765 ; ton-miles, 2,808,000 ; Mail—Actual tons, 577 ; ton-miles, 3,331,000.

I. POSTS, TELEGRAPHS, TELEPHONES AND WIRELESS.

CHAPTER XI.—LABOUR, WAGES AND PRICES.

A. RETAIL PRICES AND PRICE INDEXES.

§ 7. Tabular Statements of Retail Price Index-Numbers.

All Items ("C" Series) Retail Price Index, p. 405.—The following table shows the "C" Series index-numbers for the December quarter, 1949 and June quarter, 1950 for each capital city and for the six capital cities combined, showing separate series for each of the four main groups of items :—

ALL ITEMS ("C" SERIES) RETAIL PRICE INDEX-NUMBERS (a) : CAPITAL CITIES.

(Base of each Group : Weighted average of Six Capital Cities, 1923-27 = 1,000.)

Period.	Sydney.	Melbourne.	Brisbane.	Adelaide.	Perth.	Hobart.	Six Capitals. (b)
---------	---------	------------	-----------	-----------	--------	---------	----------------------

GROUP I.—FOOD AND GROCERIES.

Dec. Qtr. 1949 ..	1,421	1,451	1,367	1,398	1,488	1,514	1,429
June „ 1950 ..	1,518	1,567	1,421	1,446	1,559	1,537	1,520

GROUP II.—HOUSING (4 AND 5 ROOMS) (c).

Dec. Qtr. 1949 ..	1,049	977	873	914	897	941	983
June „ 1950 ..	1,049	978	878	925	901	941	986

GROUPS I. AND II.—FOOD, GROCERIES AND HOUSING ("B" SERIES INDEX).

Dec. Qtr. 1949 ..	1,273	1,263	1,171	1,206	1,254	1,287	1,252
June „ 1950 ..	1,332	1,334	1,206	1,240	1,299	1,301	1,308

GROUP III.—CLOTHING.

Dec. Qtr. 1949 ..	2,161	2,117	2,072	2,113	2,155	2,129	2,132
June „ 1950 ..	2,307	2,234	2,197	2,227	2,264	2,272	2,261

GROUP IV.—MISCELLANEOUS.

Dec. Qtr. 1949 ..	1,389	1,397	1,316	1,410	1,305	1,234	1,378
June „ 1950 ..	1,446	1,407	1,340	1,448	1,349	1,246	1,413

GROUPS I. TO IV.—ALL ITEMS ("C" SERIES INDEX).

Dec. Qtr. 1949 ..	1,486	1,472	1,393	1,440	1,459	1,459	1,466
June „ 1950 ..	1,564	1,542	1,446	1,492	1,517	1,501	1,534

(a) The index-numbers given in the separate parts of the table cannot be compared with each other in order to show the relative cost of food and groceries, housing, etc., since the cost in 1923-27 in each group or combination is made equal to 1,000. (b) Weighted average. (c) The rent index-numbers measure the proportionate rise and fall in the average weekly rentals paid for houses of four and five rooms taking corresponding houses throughout. See footnote (b) on page 401.

B. WHOLESALE PRICES AND PRICE INDEXES.**§ 1. Melbourne Wholesale Price Index.**

Index-numbers, p. 412.—The following are the index-numbers for each group, and for all groups combined, of those commodities included in the series for the year 1949 :—

Index-numbers—Melbourne Wholesale Prices (Base of each Group : Year 1911 = 1,000), Year 1949 : Metals and Coal, 3,502 ; Wool, Cotton, Leather, etc., 3,966 ; Agricultural Produce, etc., 2,876 ; Dairy Produce, 2,309 ; Groceries, 2,558 ; Meat, 3,356 ; Building Materials, 4,611 ; Chemicals, 3,221 ; All Groups, 3,191.

§ 2. Basic Materials and Foodstuffs.

Index-numbers, p. 413.—Index-numbers for each group of commodities and for all groups combined for the new index of wholesale prices of basic materials and foodstuffs are shown below for the year 1949-50 :—

Index-numbers—Basic Materials and Foodstuffs (Base of each Group : Average three years ended June, 1939 = 1,000), Year 1949-50 : Basic Materials—Metals and Coal, 2,144 ; Oils, Fats and Waxes, 1,842 ; Textiles, 4,335 ; Chemicals, 1,867 ; Rubber and Hides, 1,426 ; Building Materials, 2,247 ; Total, 2,145 ; Foodstuffs and Tobacco, 1,979 ; Basic Materials and Foodstuffs—goods principally imported, 2,231 ; goods principally home produced, 1,982 ; Total All Groups, 2,054.

D. WAGES.**§ 2. Rates of Wage and Hours of Labour.**

Weekly Rates of Wage, pp. 416 and 418.—The following table shows for each State and Australia the weighted average nominal weekly rates of wage payable, and the index-numbers based thereon, for adult males and for adult females at 31st December, 1949 and 30th June, 1950 :—

WAGE RATES OF ADULT MALES AND FEMALES.

(a) Weighted average for Australia.

§ 3. Basic Wages in Australia.

Current Commonwealth Basic Wage Rates, p. 429.—The basic weekly wage rates for adult males for each Capital City and the six capitals, operative from the first pay period in August, 1950, were as follows:—Sydney, 142s. od.; Melbourne, 140s. od.; Brisbane, 132s. od.; Adelaide, 134s. od.; Perth, 136s. od.; Hobart, 135s. od.; Six Capitals, 138s. od. Female rates varied approximately from 54 to 75 per cent. of male rates.

As from the first pay period in November, 1950 the automatic adjustments due to quarterly changes in the index of retail prices increased these rates by a further 4s. for Sydney, Hobart and the Six Capitals and by 3s. for Melbourne, Brisbane, Adelaide and Perth.

Following an exhaustive inquiry, the following rates were fixed by the Commonwealth Court of Conciliation and Arbitration to operate from the first pay period in December, 1950:—Sydney, 165s. od.; Melbourne, 162s. od.; Brisbane, 154s. od.; Adelaide, 158s. od.; Perth, 160s. od.; Hobart, 160s. od.; Six Capitals, 162s. od., and these also will be subject to automatic adjustment in accordance with the index of retail prices. At the same time the female basic wage rates were prescribed as 75 per cent. of the corresponding male rates.

Current State Basic Wage Rates, p. 435.—The table below shows the current basic weekly wage rates declared by the various State tribunals, operative in August, 1950:—

BASIC WEEKLY WAGE RATES FIXED BY STATE INDUSTRIAL TRIBUNALS.

State.	Basic Wage.		Date of Operation.	Family Unit (for Male Rate).
	Males.	Females.		
	£ s. d.	£ s. d.		
New South Wales ..	(a) 7 2 0	(a) 3 16 6	1.8.50	(b)
Victoria(c) ..	(7 0 0)	(3 15 6)	(1.8.50)	(c)
Queensland ..	(d) 6 16 0	(d) 4 5 6	31.7.50	Man, wife and three children
South Australia ..	6 14 0	3 13 2	1.8.50	" " " "
Western Australia..	(e) 7 3 6	(e) 3 17 6	31.7.50	Man, wife and two children
Tasmania(c) ..	(6 15 0)	(3 13 0)	(1.8.50)	(c)

(a) Sydney, Newcastle, Port Kembla-Wollongong, Broken Hill—Males, £7 9s.; Females, £4 0s. 6d. Elsewhere—Males, £6 19s.; Females, £3 15s. (b) Commonwealth Basic Wage operative—no defined family unit. (c) Non-declared. Rates (Capital City) shown are based on those of Commonwealth Court which are followed to a large extent. No defined family unit. (d) Southern Division (Eastern District—including Brisbane). Allowances are added for other Areas:—Males—Southern Division (Western District), 7s. 4d.; Mackay Division, 5s. 6d.; Northern Division (Eastern District), 10s.; Northern Division (Western District), 17s. 4d.; Females—half of these allowances. (e) Metropolitan Area. Basic wage from 31.7.50 for Gold-fields Areas and other portions of State excluding the S.W. Land Division—Males, £7 11s. 6d.; Females, £1 18s. 10d.; and for S.W. Land Division (excluding Metropolitan Area)—Males, £7 3s. 3d.; Females, £3 17s. 4d.

As with the Commonwealth basic wage rates, the State rates were also increased in November, 1950, the male rates for each State being as follows:—New South Wales, £7 6s.; Victoria (£7 3s.); Queensland, £6 19s.; South Australia, £6 17s.; Western Australia, £7 6s. 6d.; Tasmania (£6 19s.); as from December, 1950 male rates were:—New South Wales, £8 5s.; Victoria (£8 2s.); Queensland, £7 14s.; South Australia, £7 18s.; Western Australia, £8 6s. 6d.; Tasmania (£8), and important changes were made to female rates which affected their previously existing relationship with male basic wage rates.

E. EMPLOYMENT.

§ 1. Employment.

Wage and Salary Earners in Employment, p. 440.—The following are particulars of wage and salary earners in civil employment, excluding rural wage earners, females in domestic work in private homes and persons on the paid strength of the Defence Forces, for the month of June, 1950 :—

Males, Females and Persons, respectively : New South Wales—740,800, 278,500, 1,019,300 ; Victoria—510,700, 210,000, 720,700 ; Queensland—250,400, 83,100, 333,500 ; South Australia—165,700, 54,300, 220,000 ; Western Australia, 120,500, 39,900, 160,400 ; Tasmania—58,400, 19,400, 77,800 ; Australia (including internal territories)—1,858,700, 688,200, 2,546,900.

§ 2. Unemployment.

Unemployment of Members of Trade Unions, pp. 443 and 445.—The following particulars relate to unemployment of members of trade unions during the year 1949 and the June quarter of 1950, respectively :—Australia : Unions reporting, 377, 375 ; Membership, 790,630, 819,331 ; Unemployed—Number, 15,342, 6,361 ; Percentage, 2.0, 0.8. States : Percentage Unemployed—New South Wales, 3.2, 1.0 ; Victoria, 0.7, 0.5 ; Queensland, 0.9, 0.3 ; South Australia, 2.3, 0.7 ; Western Australia, 0.9, 1.5 ; Tasmania, 0.6, 0.8 ; Australia, 2.0, 0.8.

Figures for 1949 include particulars of all members of reporting unions indirectly affected by the industrial dispute in the coal mining industry (June–August, 1949) ; those directly affected are, however, excluded.

§ 4. Industrial Disputes.

Summary of Disputes (involving Stoppage of Work), p. 449.—The following table shows particulars of industrial disputes in each State during 1949 :—

INDUSTRIAL DISPUTES : SUMMARY, 1949.

State.	Number.	Establishments Involved.	Workpeople Involved.			Working Days Lost.	Estimated Loss in Wages. £
			Directly.	Indirectly. (a)	Total.		
New South Wales(b)	739	3,428	197,367	3,526	200,893	1,005,285	1,981,769

§ 15. Australian Index of Export Prices.

Monthly Index (Fixed Weights), p. 509.—The following are the export price index-numbers for the year 1949-50 :—

Export Price Indexes—Australia, Simple Aggregative Index : Fixed Weights
(Base of each section : Average of three years ended June, 1939 = 1,000),
Year 1949-50 : Wool, 4,727 ; Wheat, 4,002 ; Butter, 2,504 ; Metals, 4,212 ;
Meats, 1,969 ; Sugar, 3,694 ; Dried Fruits, 1,762 ; Tallow, 4,000 ; Hides,
4,792 ; Gold, 1,644 ; All Groups—Excluding Gold, 3,994 ; Including
Gold, 3,830.

Revised index-numbers for the years 1946-47, 1947-48 and 1948-49, respectively,
are as follows :—Wool, 1,734, 2,872, 3,649 ; Tallow, 3,614, 4,365, 4,986 ;
All Groups—Excluding Gold, 2,087, 2,955, 3,481 ; Including Gold, 2,027,
2,834, 3,324. Tallow has been revised for the years 1944-45 and 1945-46
also :—1,514, 1,608.

CHAPTER XIII.—POPULATION.

§ 3. Distribution and Fluctuation of Population.

Growth and Distribution, pp. 521-4, Mean Population, pp. 523-4.—The following table shows 1949 population figures for each State and Territory :—

ESTIMATED POPULATION.(a)

(a) Excess of births over deaths, including deaths of defence personnel in Australia. (b) Excess of births over deaths, as defined in note (a), per 1,000 of mean population. (c) Includes deaths of defence personnel in Australia.

§ 6. General Characteristics.

Occupational Status, p. 556.—The number of persons usually in industry, business, trade or service who at the 1947 Census stated that they were out of a job on 30th June, 1947 was 82,774, consisting of 66,009 males and 16,765 females, or 3.5 per cent. of the males and 2.6 per cent. of the females in the wage-earning group, including those not at work. At the previous Census, which was taken in 1933 during the depression, 405,269 males and 75,775 females were unemployed, representing 25.5 per cent. of the males and 14.8 per cent. of the females in the wage-earning group.

During the period of heavy unemployment in 1933 approximately 91 per cent. of unemployment was due to scarcity of work, but in 1947 only 41 per cent. was stated to be due to this cause. The balance consisted of those who were not actively seeking work at the time of the Census, and those latter in turn consisted almost entirely, and in approximately equal proportions, of those who were indisposed through sickness or accident, and those who were resting between jobs.

POPULATION : PERSONS USUALLY IN INDUSTRY, ETC., BUT NOT AT WORK, CLASSIFIED ACCORDING TO CAUSE, AUSTRALIA, 1933 AND 1947.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

NOTE.—Minus sign (—) denotes decrease.

§ 8. Oversea Migration.

Classes of Arrivals and Departures, p. 575.—Arrivals and departures during 1949 were:—Permanent new arrivals, 107,727; Australian residents returning from abroad, 28,116; temporary visitors arriving, 37,202; total arrivals, 233,135; Australian residents departing permanently, 18,457; Australian residents departing temporarily, 25,351; temporary visitors departing, 39,326; total departures, 83,134. Permanent migration refers to persons, other than Australian troops and dependants, intending residence for one year or longer—in Australia in the case of arrivals and abroad in the case of departures. Temporary migration refers to persons intending residence for shorter periods but includes Australian troops and dependants, irrespective of period of residence.

CHAPTER XIV.—VITAL STATISTICS.

§ 1. Marriages, § 2. Fertility and Reproduction, and § 3. Mortality.

Numbers and Rates, pp. 587-8, 595-6, 612-3 and 617.—The following table shows totals and rates for marriages, births, deaths, and infant deaths for 1949:—

MARRIAGES, BIRTHS, DEATHS AND INFANTILE DEATHS, 1949.

births registered.

(b) Number of deaths under 1 year per 1,000 of live

Australian Life Tables. p. 616.—(i) *Life Tables prior to 1947.* It has been the practice at each Census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. In 1911 the mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated by the Commonwealth Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881–1890, 1891–1900 and 1901–1910. These compilations furnished a comprehensive view of Australian mortality in respect of sex, of time, and of geographical distribution, and practically superseded all Life Tables prepared in Australia prior to 1911. In addition, monetary tables based on the experience for the whole of Australia for the decennium 1901–1910 were prepared and published.

At the Census of 1921 Life Tables were prepared by the Commonwealth Statistician from the population recorded and the deaths in the three years 1920–22. Similarly in 1933 the Life Tables which were prepared by Mr. F. W. Barford, M.A., A.I.A. were based on the Census population and the deaths in the calendar years 1932–34.

(ii) *Life Tables of Census of 1947.* On the occasion of the 1947 Census, Life Tables representing the sixth in the series were compiled by the Commonwealth Actuary, Mr. W. C. Balmford, F.I.A. These were based on the population recorded, in conjunction with the deaths during 1946, 1947 and 1948, as it was considered undesirable to take into account deaths occurring prior to 1946 owing to the possible effects on the civilian population of conditions arising from the 1939–45 War. Full particulars of the data used, the methods of construction and the tabulations of these Life Tables will be found in the report of the Commonwealth Actuary which was published by the Commonwealth Statistician in 1950. This report will also appear in Volume III. of the Australian Census of 1947.

The main characteristics of the Life Tables and the conclusions to be drawn from the following comparative tables are:—

- (a) A further substantial reduction has occurred in the mortality rates in the first year of life;
- (b) A further marked improvement is evident in the vitality of both males and females up to about age 40;
- (c) A less pronounced improvement is shown in the mortality rates of both sexes between ages 40 and 80; indeed, in the case of males, the rates between ages 60 and 80 are generally in excess of those recorded in the 1932–34 Tables;
- (d) Although the 1932–34 Tables disclosed that the mortality rates of females at the child-bearing ages close to age 30 were slightly in excess of the rates for males at the same ages, the differences in the rates on this occasion are slightly in favour of the females;
- (e) The mortality rates for females are lighter than those for males at all ages;
- (f) On the whole, the vitality of the female population shows a greater degree of improvement over the last fourteen years than does that of the males.

CHAPTER XV.—LOCAL GOVERNMENT

§ 2. Local Government Authorities.

Finances, pp. 658–661.—Particulars of the finances of all Local Government Authorities in Australia for the year 1947–48 are as follows :—

Ordinary Services : Revenue (excluding loan receipts), £30,252,843 ; Expenditure (excluding loan expenditure) £32,141,784 ; Loan Expenditure on Works, £4,646,634.

Business Undertakings : Revenue (excluding loan receipts), £22,260,939 ; Expenditure (excluding loan expenditure), £22,227,672 ; Loan Expenditure on Works, £3,742,566.

§ 3. Local and Semi-Governmental Authorities' Debt.

Local and Semi-Governmental Authorities' Debt, p. 664.—Particulars of the debt of Local and Semi-Governmental Authorities in Australia for the year 1947–48 are as follows :—

Local Government Authorities : New Money Loan Raisings, £9,182,000 ; Funds provided for Redemption, £4,013,000 ; Accumulated Sinking Fund Balance, £10,376,000 ; Debt Outstanding, £76,100,000.

Semi-Governmental, etc., Authorities (in same order as foregoing) : £19,202,000 ; £3,471,000 ; £13,239,000 ; £226,243,000.

CHAPTER XVI.—PRIVATE FINANCE.

A. CURRENCY.

§ 3. Notes.

The Australian Note Issue, p. 707.—The average value of notes in circulation for the year 1949–50 was £223,001,000. This amount was distributed in denominations as follows :—10s., £8,496,000 ; £1, £65,695,000 ; £5, £90,561,000 ; £10, £57,871,000 ; £20, £8,000 ; £50, £69,000 ; £100, £81,000 ; and £1,000, £220,000. The amount held by the banks was £27,895,000 and by the public, £195,106,000.

B. BANKING.

§ 1. Cheque-Paying Banks.

Commonwealth Bank, pp. 715–6.—Particulars of the average liabilities and assets of the Central Banking Business and General Banking Division, etc., of the Commonwealth Bank for the year 1949–50 appear below :—

The average liabilities of the Central Banking Business (including Note Issue Department) of the Commonwealth Bank for the year ended 30th June, 1950 amounted to £842,734,000. Capital and Reserve Funds amounted to £9,898,000 ; Notes on Issue to £222,198,000 ; Special Accounts of Trading Banks to £379,632,000 ; Other Deposits of Trading Banks to £30,661,000 ; Other Liabilities to £200,345,000.

Particulars of the average assets are as follows :—Gold and Balances held abroad, £434,018,000 ; Australian Coin, £3,795,000 ; Cheques and Bills of Other Banks, £4,102,000 ; Government and Other Securities (including Treasury Bills), £348,965,000 ; Bills Receivable and Remittances in Transit, £81,000 ; and Other Assets, £51,773,000.

The average liabilities in Australia of the General Banking Division and the Rural Credits, Industrial Finance and Mortgage Bank Departments for the year ended 30th June, 1950 were £120,052,000. Of this amount deposits not bearing interest amounted to £72,311,000; Deposits bearing interest to £14,775,000; Balances due to other Banks to £14,282,000; Other Liabilities to £18,684,000.

The average assets in Australia, £135,262,000, included Cash and Cash Balances, £13,974,000; Balances with Other Banks, £535,000; Treasury Bills, £1,962,000; Other Australian Public Securities, £35,353,000; Other Securities, £74,000; Loans, Advances and Bills Discounted, £81,669,000; Other Assets, £1,695,000.

Nine Trading Banks, p. 717.—Average liabilities in Australia of the Nine Trading Banks for the year ended 30th June, 1950 were £957,501,000. Interminable Deposits or Deposit Stock amounted to £729,000; Deposits not Bearing Interest to £685,587,000; Deposits Bearing Interest to £224,477,000; Notes in Circulation to £158,000; Balances due to Other Banks to £33,227,000; Other Liabilities to £13,323,000.

Average Assets in Australia amounted to £979,662,000. These comprised Cash and Cash Balances, £51,960,000; Special Accounts with Commonwealth Bank, £377,006,000; Balances with Other Banks, £17,683,000; Treasury Bills, £26,502,000; Other Australian Public Securities, £83,813,000; Other Securities, £536,000; Loans, Advances and Bills Discounted, £403,890,000; All Other Assets, £18,272,000.

Clearing House Returns, p. 723.—The average weekly bank clearings in each capital city for the year ended 30th June, 1950 were as follows:—Sydney, £64,909,000; Melbourne, £61,003,000; Brisbane, £13,278,000; Adelaide, £11,604,000; Perth, £7,458,000; Hobart, £2,116,000; Total, £160,368,000.

Debits to Customers' Accounts, p. 724.—The average weekly debits to customers' accounts in each State for the year 1949-50 for all cheque-paying banks were as follows:—New South Wales, £115,208,000; Victoria, £101,877,000; Queensland, £29,668,000; South Australia, £19,339,000; Western Australia, £13,822,000; Tasmania, £5,605,000; Australian Capital Territory, £265,000; total, £285,784,000.

§ 2. Savings Banks.

All Savings Banks, p. 727.—The amounts on deposit in the several States at 30th June, 1950 were:—New South Wales, £258,874,000; Victoria, £257,121,000; Queensland, £92,201,000; South Australia, £87,695,000; Western Australia, £39,612,000; Tasmania, £24,272,000; Northern Territory, £859,000; Australian Capital Territory, £1,451,000; total, £762,085,000. Total excess of deposits over withdrawals during 1949-50 was £35,672,000, and interest added was £12,194,000.

D. INSURANCE.

§ 2. Life Assurance.

Life Assurance, pp. 741-4 and 745-7.—The following is a summary of the life assurance business transacted in Australia during 1949, compiled from monthly returns collected from the 21 companies registered under the Life Insurance Act 1945, and excluding the Government Insurance Office of New South Wales and the Queensland State Government Insurance Office. Particulars shown are therefore not entirely comparable with those in Chapter XVI., which are derived from annual returns and include data of the State Government Offices.

Ordinary Department and Industrial Department, respectively:—New Policies Issued in Australia—Number, 238,898, 303,146; Sum Assured, £135,826,000, £29,897,000; Policies Matured or Otherwise Discontinued in Australia—Number, 95,595, 221,882; Sum Assured, £42,449,000, £15,051,000. Particulars of Annuities are excluded.

Premium Receipts in Australia in 1949 amounted to £32,242,000 and £11,790,000, Ordinary and Industrial Departments, respectively. Claims, etc., paid amounted to £13,928,000 and £6,124,000, respectively. Particulars of Annuities are included.

CHAPTER XVII.—PUBLIC FINANCE.

C. COMMONWEALTH AND STATE FINANCE.

Revenue and Expenditure, p. 814.—The following table shows particulars of Commonwealth and State revenue and expenditure during the year 1949–50.

COMMONWEALTH AND STATES: REVENUE AND EXPENDITURE, 1949–50.(a)

(£'000.)

Government of—	Consolidated Revenue Fund.			Loan Fund— Net Expenditure on Works and Services.
	Revenue.	Expenditure.	Surplus (+) or Deficit(—)	
New South Wales	106,504	107,682	—1,178	24,850

§ 4. Commonwealth Loan Raisings.

Loans Raised, pp. 833-4.—Particulars of loans raised by the Commonwealth between 1st July, 1949 and 30th June, 1950 are given in the following table.

COMMONWEALTH LOANS RAISED, 1949-50.

Month of Raising.	Where Raised.	Amount Invited.	Amount Subscribed.	Rate of Interest.	Year of Maturity.	Purpose.
		£'000.	£'000.	%		
September, 1949	.. Australia	115,000	{ 37,643 96,612	{ 2 3½	{ 1953 1960-63	{ Conversion and redemption loan, £89,088,000 State purposes, £45,167,000
October, 1949	.. Australia	7,000	7,000	3½	1960-63	Redemption of London loan
March, 1950	.. Australia	45,000	{ 10,668 54,134	{ 2 3½	{ 1953 1961-64	{ Conversion and redemption loan, £4,125,000 Housing and War (1939-45) Services, etc., purposes, £34,101,000 State purposes, £26,576,000

NOTE.—All loans in 1949-50 were issued at par.

E. TAXES ON INCOME.

General, p. 838.—Three major revisions were made in the assessment of income taxes on individuals for the 1950-51 income year.

- (1) The two separate levies of Income Tax and Social Services Contribution were merged into a single levy—Income Tax and Social Services Contribution.
- (2) The system of rates which increased by a fraction of one penny for every £1 increase in taxable income was replaced by a system of stepped rates of tax and contribution that increase for every £50 or multiple of £50 of taxable income.
- (3) Concessional allowances for dependants, medical expenses, life assurance premiums, superannuation contributions, etc., either by way of rebates of income tax or by way of concessional rates of social service contribution, were replaced by concessions by way of deductions from income.

Rebates of Tax, p. 838.—For the income year 1949-50 concessional allowances for dependants, medical expenses, etc., were made by means of a rebate of income tax, or by way of concessional rates of social services contribution. For 1950-51 and subsequent income years this system of concessional allowances has been replaced by a system of

concessional deductions from income. Concessional deductions are allowed only to taxpayers who are residents. The maximum amount allowed for each dependant is shown in the following table :—

DEPENDANTS : CONCESSIONAL DEDUCTIONS.

(£.)

Dependant (Resident).	Amount of Deduction. (a)
Spouse of Taxpayer	104
Daughter-housekeeper	104
One child under 16 years of age	78
Each other child under 16 years of age	52
Student child 16-21 years of age	78
Invalid relative	78
Parent of Taxpayer	104

(a) If the dependant has a separate net income, is not wholly maintained by the taxpayer, or is maintained for part only of the year, the deduction is reduced.

A taxpayer is also entitled to a concessional deduction of £104 for a housekeeper wholly engaged in keeping house and in caring for the taxpayer's children under 16 years of age or a dependent invalid relative. If the taxpayer is married, the deduction for a housekeeper is only allowed in special circumstances. This deduction is reduced if the housekeeper is employed for only part of the year.

Medical expenses, paid by a taxpayer in respect of himself, a dependant, or other child under 21 years of age, up to £100 for each person are allowed as a concessional deduction. Medical expenses include payments made to a legally qualified medical practitioner, nurse or chemist or a hospital in respect of an illness or operation, payments for dental services not exceeding £20 for any one person, payments for therapeutic treatment and eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles and the remuneration of an attendant of a person who is blind or confined to bed or invalid chair.

In addition, payments of life, etc., insurance premiums and contributions to superannuation and similar funds and friendly societies not exceeding an aggregate of £200, and funeral expenses of a dependant not exceeding £30 are allowed as concessional deductions.

In addition to concessional deductions, all taxpayers (residents and non-residents) are allowed a deduction from income of rates which are annually assessed and taxes on land, gifts to charitable, benevolent or patriotic funds, and one-third of amounts paid as calls to certain mining, forestry and oil-prospecting companies. Previously, allowance for these items was made by means of a rebate of income tax or concessional rates of social services contribution.

Effective Exemptions from Tax, p. 840.—For the income year 1950-51 resident taxpayers are exempt from Income Tax and Social Services Contribution if their income does not exceed the amounts shown in the following table.

RESIDENT TAXPAYERS : EFFECTIVE EXEMPTIONS FROM TAX.

(£.)

Taxpayer with—	Income Tax and Social Service Contribution— 1950-51 Income.
No dependants	104
Wife	208
Wife and one child	286
Wife and two children	338
Wife and three children	390
Wife and four children	442

Rates of Income Tax and Social Services Contribution on Individuals, p. 841.—The following table shows the income tax and social services contribution on 1950-51 incomes.

**INCOME TAX AND SOCIAL SERVICES CONTRIBUTION—INDIVIDUALS, 1950-51

10,000	upward	5,621 13 4	180d. " " " 10,000	

If the taxable income exceeds £400 and includes income from property, the amount of the income from property is subject to the further tax shown in the following table.

FURTHER TAX ON PROPERTY INCOME.

Taxable Income from Property.		Column 3.	Column 4.
Column 1.	Column 2.	Further Tax and Contribution on Taxable Income shown in Column 1.	Further Tax and Contribution on Remainder of * Taxable Income from Property.
Not less than—	Not more than—		
£	£	£ s. d.	£
Nil	100	Nil	Nil
100	1,000	Nil	8d. on each £1 in excess of 100
1,000	4,000	30 0 0	16d. " " " 1,000
4,000	6,000	230 0 0	8d. " " " 4,000
6,000	10,000	296 13 4	4d. " " " 6,000
10,000	upwards	363 6 8	

If the total taxable income does not exceed £1,000, the further tax on property income cannot exceed twelve pence for every £1 by which the total taxable income exceeds £400. The application of this provision is illustrated by the following example based on an income of £600 derived wholly from property :—

Further tax on £600 property income—

	£	s.	d.
By applying scale rate £500 at 8d. in the £1	..	16	13 4
By applying limiting provision £200 at 1s. in the £1		10	0 0

Taxes on Sample Individual Incomes, p. 842.—The following table shows the income Tax and Social Services Contribution payable by taxpayers with various incomes and numbers of dependants on income derived in 1950-51 :—

(a) Subject to revision. (b) For year ended previous December. (c) Estimated. (d) Subject to revision. During the year ended 30th June, 1950, receipts of first-hand wools into brokers' stores plus wool exported on skins and wool exported for sale overseas totalled 1,155.4 million lb. as in the grease.

CHAPTER XX.—AGRICULTURAL PRODUCTION.

§ 3. Distribution, Production and Value of Crops.

Principal Crops, pp. 936-8.—The following particulars show the area, production and average yield per acre of the principal crops in Australia during the 1948-49 and 1949-50 seasons, respectively :—

Area ('000 acres) : Wheat, 12,583, 12,240 ; Oats, 1,770, 1,748 ; Maize, 182, 194 ; Hay, 1,580, 1,605 ; Sugar-cane, 384, 398 ; Total Crops, 20,636, 20,605.

Production ('000) : Wheat, 190,703 bush., 218,221 bush. ; Oats, 23,601 bush., 27,421 bush. ; Maize, 5,188 bush., 6,313 bush. ; Hay, 2,292 tons, 2,437 tons ; Sugar-cane, 6,708 tons, 6,849 tons ; Cane sugar, 943 tons, 940 tons.

Average Yield per Acre : Wheat, 15.15 bush., 17.83 bush. ; Oats, 13.34 bush., 15.69 bush. ; Maize, 28.51 bush., 32.53 bush. ; Hay, 1.45 tons, 1.52 tons ; Sugar-cane 25.19 tons, 24.35 tons ; Cane sugar, 3.54 tons, 3.34 tons. (Sugar-cane and Cane sugar yields are per acre of productive crop).

CHAPTER XXI.—FARMYARD, DAIRY AND BEE PRODUCTS.

Milk, Butter, Cheese, Pork, Bacon, Ham.—Particulars of total production of whole milk and the total amounts of butter and cheese (showing factory production by States and an estimate of factory and farm production for Australia), pork, bacon and ham produced in each State during the year 1949-50 are shown below :—

MILK, BUTTER, CHEESE, PORK, BACON AND HAM PRODUCTION, 1949-50.(a)

(a) Subject to revision.

(b) Average over whole year ; includes working proprietors.

(c) Excludes

amounts drawn by working proprietors.

Value of Production in Classes of Industry, p. 1115.—The following table shows, for the year 1948-49, the value of production in Australia for the various classes of factories :—

FACTORIES : VALUE OF PRODUCTION, AUSTRALIA, 1948-49.(a)

(£.)

Class of Industry.	Value of Production.	Class of Industry.	Value of Production.
I. Treatment of Non-metalliferous Mine and Quarry Products ..	11,251,798	IX. Food, Drink and Tobacco..	89,800,039
II. Bricks, Pottery, Glass, etc. ..	10,846,562	X. Woodworking and Basketware ..	29,645,019
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	33,554,814	XI. Furniture, Bedding, etc. ..	10,886,418
IV. Industrial Metals, Machines, Implements and Conveyances ..	210,854,442	XII. Paper, Stationery, Printing, Bookbinding, etc. ..	35,304,518
V. Precious Metals, Jewellery and Plate ..	3,436,033	XIII. Rubber ..	7,675,754
VI. Textiles and Textile Goods ..	35,861,749	XIV. Musical Instruments ..	611,730
VII. Skins and Leather ..	10,360,095	XV. Miscellaneous Products ..	10,557,888
VIII. Clothing ..	52,236,241	XVI. Heat, Light and Power ..	15,532,258
		Total ..	568,415,358

(a) Subject to revision.

CHAPTER XXVII.—REPATRIATION.

§ 2. War Pensions and § 3. Service Pensions.

Number of Pensioners and Expenditure, pp. 1214 and 1217.—The following table shows the number of war and service pensions in force at 30th June, 1950, and expenditure for the year 1949-50 :—

WAR AND SERVICE PENSIONS : NUMBER AND PAYMENTS, 1949-50.

Particulars.	Place of Payment.							Total.
	N.S.W. (a)	Vic.	Q'land.	S. Aust. (b)	W.Aust.	Tas.	Oversea.

Number ..	124,836	73,498	40,957	35,759	36,253	12,550	1,131	324,984
Amount Paid £'000 ..	3,856	2,592	1,276	1,155	1,036	468	52	10,435
Service Pensions—								
Number ..	5,478	3,883	2,805	1,641	1,953	578	..	16,338
Amount Paid £'000 ..	478	347	248	142	166	51	..	1,432

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

CHAPTER XXVIII.—MISCELLANEOUS.

§ 18. New Building.

Summary, pp. 1237-9.—The following table provides a summary of the new building activity in each State and the Australian Capital Territory during the year ended 30th June, 1950:—

NEW BUILDINGS: SUMMARY, 1949-50.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
New Buildings—Value £'000—								
Commenced	51,277	46,497	16,994	11,301	8,459	8,379	1,365	144,272
Completed	40,920	34,673	13,953	9,074	5,352	5,342	1,462	110,776
Under construction(a)	75,006	55,729	11,805	10,519	10,022	8,989	4,232	176,302
New Houses—Number—								
Commenced	22,055	21,035	10,009	6,109	5,031	3,664	389	68,292
Completed	18,766	15,603	9,447	4,904	3,509	2,852	404	55,485
Under construction(a)	26,402	21,353	4,520	5,241	3,957	3,357	678	65,508
New Flats—Number—								
Commenced	1,487	328	38	..	399	16	24	2,292
Completed	1,075	246	16	..	101	24	32	1,494
Under construction(a)	1,961	725	22	..	313	17	122	3,160
Persons engaged in new building(a)	42,393	31,684	15,643	8,743	6,908	5,700	2,022	113,093

(a) At 30th June, 1950.

NOTE.—For definitions and other explanatory matter regarding data presented, see Chapter XXVIII., pp. 1236 and 1238.

The value of new buildings completed during 1949-50 comprised:—Houses, £89,771,000; Flats, £2,558,000; Shops with Dwellings, £1,023,000; Shops without Dwellings, £434,000; Hotels, Guest Houses, Boarding Houses, etc., £1,274,000; Factories, £6,444,000; Other New Buildings, £9,242,000.

The number of new houses completed during 1949-50 comprised:—Brick, brick veneer, concrete and stone, 19,995; Wood (weatherboard, etc.), 19,912; Fibro cement, 14,846; Other, 732.

§ 22. Valuation of Australian Production.

Net Value of Production, p. 1248.—The following table shows particulars of the net value of production in each State of the various industry groups during the year 1948-49:—

NET VALUE OF RECORDED PRODUCTION, 1948-49.

(£'000.)

Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
